

It is not always enough to do our best; sometimes we must do what is required - Churchill

This lot aren't even doing their best

What is required is not rocket science . .

Perhaps they all live on different planets.

But since there's only one planet, politicians should consider this:

To tackle climate change they must *follow the science* and choose the right date to **CONTRACT** global CO² emissions to zero.

For equity's sake they must *ensure everyone has an equal per capita share* of the remaining CO² budget **CONVERGING** on zero.

The **CONTRACTION & CONVERGENCE (C&C)** framework delivers the discipline needed to apportion responsibilities. It's been on the table since COP3. The Chinese promoted it at COP15. But still politicians dither. They refuse to adopt the only framework on the table that delivers discipline.

Their pick'n'mix approach means that even inadequate, ill-considered targets are being missed. Without a sufficient framework, they might as well be picking daisies whilst the world burns.

Yet again, COP26 will not hold leaders to account without a C&C framework—**unless of course they can come up with something better** (telling us what that means of course).

There's much more to C&C than is described here. Go to www.gci.org for much more detail (and C&C's worldwide endorsements).

Ask your politicians if they don't agree with C&C what is their better option?
