

On 19 07 2012 Bill McKibben's 'permissible Carbon Emission Budget' was 154 Gigatonnes Carbon [Gt C] and shown under the red-line.

On 20 07 2012 Bill McKibben's 'permissible Carbon Emission Budget' became 267 Gigatonnes Carbon [Gt C] and shown in yellow.

About the first figure he says 'do the maths' and here it is: - http://www.gci.org.uk/Documents/McKibben_the_Needed_Maths_.pdf

Doing the maths with the second figure it means he says that actually an extra 73% or 113 Gt C is 'permissible'.

All I am saying is 'that is a significant self-contradiction' which undermines the value of the work he does.

He chooses not to discuss it.
More detail at: - <http://www.gci.org.uk/misc.html>
