

[Antonio Guterres UN Secretary General:](#) -

"Time is running out to Act on climate change."

[Patricia Espinoza UNFCCC Executive Secretary recently declared:](#) -

"The promises are simply not good enough - many nations are sticking to their business-as-usual approach. Governments must go back & look very, carefully at what they are able to offer. It's incredible to think that just when nations are facing an emergency that could eventually end human life on this planet, we are wandering into a minefield blindfolded, where the next step could mean disaster."

[Christiana Figueres BBC R4 today 12-12-20](#)

"Unless we get minus 50% GHG emissions globally by 2030, we're into a domino effect of ecosystem failures we'll be unable to control'."

[Sir David Attenborough recently told the UN Security Council:](#) -

"We are today perilously close to tipping points that, once passed, will send global temperature spiralling catastrophically higher. If we continue on our current path, we will face the collapse of everything."

Jeni Miller, PhD

Executive Director [Global Climate and Health Alliance](#)

"The Board of the Global Climate & Health Alliance has approved signing onto the [Demands of the UKCHA](#), so please do add GCHA to the sign on."

Dear Charles,

Further to our recent exchanges about COP-26, I hope these points may help you & your colleagues obtain an outcome at COP26 consistent with UNFCCC compliance.

1. Accelerating rates of global temperature rise have been up to 50% faster than those projected onto AR5 preparations by the UKMO.
2. [The UKMO have only now publicly admitted](#) that what was their prominent and influential input to IPCC AR5 and the Paris Agreement was based on inadequate & inaccurate data. This weakens their analysis & credibility.
3. Awareness of the urgency of the climate crisis is growing, as evidenced in the statements prefacing these comment and awareness of the dangers of this situation is also growing.
4. The [growing cost of climate damages subtracted from growth per se](#), clearly accelerates with future delay in the contraction of global carbon emissions.
5. Disturbing statements reflect this: while encouraging pension funds to go green, Adair Turner now gives a 70% likelihood that, *"we are going to fail & hand on to our children & grandchildren a really nasty environment"*.
6. Agreement at COP-26 primarily depends on a globally common treaty agreed and ratified by the USA and China so others can follow that lead.
7. Without such a global treaty, gains will be less than the losses resulting from the continued use of a random growth model, where everyone picks numbers out of hats, attached to net calculations of what they jointly & severally may or may not mean. A model of organic growth is needed now.
8. Ahead of everything, the UK's role as COP-26 Chair should be to broker that deal and primarily use all reason and persuasion to that end.
9. To be 'legally enforceable' such a global treaty needs to be constitutionally pre-distributed and referenced to the global per capita average of declining carbon consumption.
10. The ["morally & intellectually coherent model"](#) (Lord John Gummer) needed is C&C, as embodied in [the UK Climate Act of 2008](#) (Lord Adair Turner). C&C provides a flexible and equitable model for UNFCCC-Compliance.
11. Bringing C&C to bear at rates commensurate with net zero globally by 2040 or sooner will achieve UNFCCC-Compliance. [The Rajan Tax proposal may help this.](#)
12. C&C has acquired a huge legacy of international support that continues to grow as a function of integrating urgency, precaution & equity (see opposite).
13. If there is anything GCI can do to help you & your colleagues resolve this now increasingly obvious peril, we're glad to stay in touch & happy to do that.

With kind regards
Aubrey Meyer GCI
