Contraction and Convergence (C&C) Climate Justice without vengeance

Contraction & Convergence or 'C&C' © ©

These pages, the support page, the awards page and the publications page on the GCI website, give some evidence supporting claims that C&C is now the most widely cited and arguably the most widely supported model in the UN negotiations on climate change and the debates these have given rise to.

"Stabilization inevitably requires Contraction and Convergence."
In others words, 'UNFCCC-Compliance' is dependent on C&C.

**Joke Waller Hunter, UNFCCC Executive Secretary
COP-9 Milan 2004**

http://www.gci.org.uk/C&C_Janos_Pasztor_UNFCCC.pdf

ZIMBABWE: [for the Africa Group]

" we do support the amendment that is proposed by the distinguished delegation from India, and just to emphasise the point of the issues that still need a lot of clarification would like to propose in that paragraph the inclusion, after "entitlements" that is the proposal by the delegation of India, the following wording; after "entitlements, the global ceiling date and time for contraction and convergence of global emissions because we do think that you cannot talk about trading if there are not entitlements, also there is a question of contraction and convergence of global emissions that comes into play when you talk about the issue of equity "

CHAIRMAN Raul Estrada:

"I thank you very much. May I ask again the distinguished delegate of the USA if they have another suggestion to propose in connection with the proposals made by the distinguished delegate of India. He does."

UNITED STATES OF AMERICA: Jonathan Pershing

" It does seem to us that the proposals by for example India and perhaps by others who speak to Contraction and Convergence are elements for the future, elements perhaps for a next agreement that we may ultimately all seek to engage in."

http://www.gci.org.uk/COP3_Transcript.pdf

Raul Estrada - Chairman Kyoto Protocol Negotiations Intergovernmental Panel on Climate Change [IPCC] Contraction and Convergence [C&C] www.gci.org.uk

"Long before the end of the Framework Convention negotiation, the Global Commons Institute (GCI) has presented a proposal on contraction and convergence, aimed to reach equality in emissions per capita. We all in this room know the GCI model where contraction is achieved after all governments, for precautionary reasons, collectively agree to be bound by a target of global GHG emissions, making it possible to calculate the diminishing amount of greenhouse gases that the world can release each year in the coming century, subject to annual scientific and political review."

The convergence part of the proposal means that each year's global emissions budget gets shared out among the nations of the world so that every country converges on the same allocation per inhabitant by an agreed date. Countries unable to manage within their shares would, be able to buy the unused parts of the allocations of other countries. The entitlement of rights transferred in this trading is legitimised by the per inhabitant criteria. Level of contraction and timing of convergence should be negotiated on the basis of the precautionary principle. Suggestions for emission reductions are well known and convergence should be achieved at medium term to satisfy legitimacy. I have read that the Chairman of IPCC's WG I, Sir John Houghton, has said that this is the "logical approach. Analysis of C&C in TAR is a must if equity is going to be taken into account in the report."

Proceedings 2nd IPCC Expert Meeting on Development, Sustainability and Equity Havana, Cuba 23-25 February 2000

<http://www.gci.org.uk/Documents/des-2nd-ipcc-expert-meeting.pdf>

"I think that Aubrey is a good gentleman because he has really been on this issue for years – donkey's years – and he's not giving up. He has the stamina. I think if all of us were like Aubrey we would have achieved very high levels. Unfortunately not many of us have been that strong."

Joshua Wairoto, Deputy Director Met Office Kenya

<http://candcfoundation.org/pages/endorsements.html#>

"The Kyoto Protocol, completed in the early hours of December 11th 1997, at present is no more than a potential breakthrough in the development of effective global policy for the control of atmospheric concentrations of greenhouse gases and the mitigation of human-induced global climate changes. The core issue of the negotiations has been deferred until COP4 in November 1998. The industrial countries have negotiated a compromise that subject to ratification will legally bind them to commitments beyond those in the UNFCCC. But, the ratification of the Protocol by the US still remains contingent on achieving the "meaningful participation" of "key" developing countries in the abatement regime and the multilateral acceptance of international emissions trading. This is a struggle to define property rights. These key developing countries include India and China and they have made it clear that their acceptance of trading is contingent on the achievement of "equitable allocations" of emissions entitlements based on achieving equal per capita entitlements globally.

COP issued instructions to the technical bodies attached to the UNFCCC to "define the relevant principles, modalities, rules and guidelines for emissions trading" in time for COP-4 in November 1998 in Buenos Aires. GCI argues that "Contraction and Convergence" is the approach that can break through this deadlock and welcomes the fact that major parties and interest groups in this dispute have already acknowledged that they take this approach seriously and that it has growing support throughout the world. As a leading economics commentator Peter Jay has noted, "... unless there is some recognition that eventually no one group of human being can expect to have an internationally recognised right to consume more of the world's limited capacity to absorb greenhouse gas emissions than any other group, it is hard to see how a globally enforceable policy can be built by consent." And in the words of the President of GLOBE International "Contraction and Convergence is not simply the right way to solve the problem, it is the only way to solve the problem."

The Kyoto Protocol and the Emergence of "Contraction and Convergence" as a framework for an international political solution to greenhouse gas emissions abatement. A Meyer 1997

<http://www.gci.org.uk/zew.pdf>

"Rights-based, that is based on equal (or otherwise defensible) rights to the global commons. A formulation that carries this insight to its logical conclusion is that of "contraction and convergence" (Meyer, 1999), whereby net aggregate emissions decline to zero, and per capita emissions of Annex I and non-Annex I countries reach precise equality."

IPCC Third Assessment [Cambridge University Press] Working Group 3 Chapter 1

http://www.grida.no/publications/other/ipcc_tar/

"A number of scenario studies have been conducted for various countries within Europe. These studies explore a wide range of emission caps, taking into account local circumstances and potentials for technology implementation. Many of these studies have used specific burden-sharing allocation schemes, such as the contraction and convergence (C&C) approach (GCI, 2005) for calculating the allocation of worldwide emissions to estimate national emissions ceilings."

IPCC Fourth Assessment [Cambridge University Press] Working Group 3 Chapter 3

http://www.ipcc.ch/publications_and_data/ar4/wg3/en/contents.html

"The framework of contraction and convergence provides a flexible methodology to address the problem of allocation of emission rights. The contraction of overall world emissions pursued along with the convergence of countries' average per capita emissions, allows developing countries to partake of the carbon budget. The per capita entitlements approach is an effective one in that it takes into account historical responsibility and is based on the egalitarian distribution of the commons, within which international justice positions of causal responsibility such as the 'polluter pays principle,' come in."

"High Level Dialogue on Climate Change" on C&C

Ursula Schaefer-Preuss - Vice President of ADB
 Haruhiko Kuroda - President and Chair ADB Board
 Ban Ki-moon - Secretary General of the United Nations
 Rajendra Pachauri - Director of TERI, Chair IPCC
 Yvo de Boer - Former Executive Secretary UNFCCC
 Gloria Macapagal Arroyo - President Philippine
 Zhou Dadi - Chief advisor national energy strategy, People's Republic of China.

Full Signatory List

http://www.gci.org.uk/Documents/ADB_Full_Signatory_List_.pdf

Per capita CO2 emissions meet in the middle.

"In the final analysis the per capita emissions in emerging economies will meet those of industrialised countries. I cannot imagine the emerging economies will one day be permitted to emit more CO2 per capita than we in the industrialised countries. With this proposal, emerging nations with rapidly expanding economies could be on board the global climate negotiations scheduled for 2009."

Angela Merkel President of Germany 2008

http://www.bundestkanzlerin.de/Content/EN/Artikel/2007/08/2007-08-30-bundestkanzlerin-in-japan__en.html

"The international climate regime should be based on legitimate principles of equity, such as long-term convergence of emission levels per capita in the various countries."

Nicholas Sarkozy President of France 2008

<http://www.ambafrance-uk.org/Franco-German-Council-of-Ministers,10729.html>

"The UK-based Global Commons Institute has taken the lead in promoting contraction and convergence, and has developed a computer model which specifies emission allocations under a range of scenarios. The concept has been supported by several national governments and legislators. Some developed nations are very wary of it because it implies drastic reductions in their emissions, but at least one minister in a European government has supported it. Commentators on climate diplomacy have identified contraction and convergence as a leading contender among the various proposals for allocating emission quotas to nations in the long term."

**"Energy - The Changing Climate" [2000]
The Royal Commission on Environmental Pollution**

<http://www.gci.org.uk/chp4.pdf>

"I fully agree that the GCI's Contraction & Convergence framework provides a realistic & equitable plan for global action. That is why C&C was a key part of the Liberal Democrat's manifesto and why I continue to believe the principle of C&C will be central to our long-term strategy on climate change."

**Nick Clegg Lib Dem MP [2010]
UK Deputy Prime Minister**

http://www.gci.org.uk/Documents/Clegg_Letter_to_Colin_.pdf

"You know I agree, in the long term there is no other way to solve this problem."

**Chris Huhne Lib Dem MP [2010]
UK Secretary of State Energy & Climate**

http://www.gci.org.uk/Documents/GCI_Letter_to_Chris_Huhne_.pdf

"Man-made climate change. Little progress can be made without fundamental agreement on the principle of 'Contraction and Convergence', as between high-income countries, which have generated the lion's share of the stock of carbon in the atmosphere, and the big low-income countries, which will contribute the greatest future emissions. Without China and India as full and equal partners in the process, it will fail."

**Vince Cable Lib Dem MP [2009] - UK Secretary of State Business
The Storm: The World Economic Crisis & What It Means**

http://www.amazon.com/Storm-World-Economic-Crisis-Means/dp/1848870582/ref=sr_1_1?s=books&ie=UTF8&qid=1286134220&sr=1-1

Along with Human Well-Being and Economic Decision-Making this we have to ask about "green taxes" that will check environmental irresponsibility and build up resources to address the ecological crises that menace us. The Contraction and Convergence proposals are among the best known and most structurally simple of these, and it would be a major step to hear some endorsement of them from a body such as this.

**Faith and the Global Agenda: Values for the Post-Crisis Economy
World Economic Forum Geneva, Switzerland 2010**

<https://members.weforum.org/pdf/faith/valuesreport.pdf>

"A good first step would be to pressure Climate and Energy Minister Chris Huhne to stand by Liberal Democrat manifesto pledges to push for an ambitious international climate treaty. Such a treaty should be based on a globally fair emission reduction model like "Contraction and Convergence", whereby emission targets are set on the assumption that everyone globally is entitled to the same level of per capita emissions. A model based on contraction and convergence should be the framework that we organise around, in advance of the Cancun climate meetings later this year. At the same time, in order to ensure we fulfil our part of the C&C contract domestically, we should urgently revisit the idea of carbon quotas. Back in December 2006, when David Miliband was Environment Secretary, he briefly took up the idea of Domestic Tradeable Quotas."

**Caroline Lucas Leader of the Green Party [2010]
Britain's first Green MP**

http://www.litmustest.org/documents/LITMUS_2010.pdf

"Climate change is likely to impose massive economic costs. The case for being prepared to spend huge resources to limit it is clear," says Turner, arguing that the cost will be repaid many times over by the avoidance of disaster. In any case, "the developed world does not have the moral right to increase the risk of flooding in Bangladesh", and, he adds acidly, "European executives worried about the cost of action should perhaps consider it the necessary price for preserving at least some skiing in the Alps. Long term the only sound strategy is that of 'contraction and convergence' – cutting greenhouse emissions to the point where they are shared equally, worldwide, on a per capita basis."

**Lord Adair Turner - Chairman UK Climate Change Committee
Interview in Green Futures**

<http://www.forumforthefuture.org/greenfutures/articles/60905>

Adair Turner said the UK Climate Act as C&C in evidence to the EAC and DECC select committees in 2009 and converging to equal per capita entitlements globally is the only option that is, doable and fair for organising and sharing the full-term emissions-contraction-event to bring us to UNFCCC-compliance. He agreed, "if, for reasons of urgency the rate of global contraction has to be accelerated, for reasons of equity the rate of international convergence has to be accelerated relative to that."

Evidence to Climate and Energy Committee [2010]

<http://www.publications.parliament.uk/pa/cm200809/cmselect/cmenergy/309/09030402.htm>

"Aubrey Meyer has done an amazing job and shown extraordinary persistence and ingenuity in working out a scheme of this kind. I very much admire him for it. Above all he's laid out an intellectual and legal framework which is what you need if you're going to set global arrangements in place."

**Sir Crispin Tickell, former UK Ambassador to the UN [2007]
Director of the Policy Foresight Programme
James Martin Institute Oxford University**

<http://www.candcfoundation.com/pages/endorsements.html#>

GLOBE International adopted the "Contraction and Convergence" analysis in May 1977. Since then, I and my colleagues have campaigned for its acceptance. This pamphlet is a record of those efforts and provides a short summary of the work of the Global Commons Institute (GCI) in this field. I would like to pay tribute to all the GLOBE parliamentarians who have fought so hard for this cause and particularly to the work of Aubrey Meyer and the GCI team on whose brilliant analysis the campaign is based.

**Tom Spencer Former Director GLOBE International
Chair European Parliament Foreign Affairs Committee**

http://www.gci.org.uk/Documents/globe_.pdf

"Talking about why it is important that everybody in the world gets behind C&C. I don't say things like this lightly. I am not really one for hyperbole or strange religious motivations. What I find is important is that my whole life experience has taught me that things that have proportionality to them, that have melody to them, that are profoundly simple, usually have something right going for them. And secondly that you can judge an idea by the quality of the enemies it gets and there have been some profound enemies for C&C, which is based on an understanding that perhaps there is something of the night about it there is something not properly scientific. Well actually it is, it is totally scientific and more important than that it has blended something the age of reason was never able totally to do which is blending the empiricism of it with 'soul'; the quite obvious rightness of a system that apportions to every person on earth a carbon contract that it theirs to dispose of over a period of time to create a parity that enables us to live one with another in a way that enables us to be connected to the earth itself in terms of being able to make us live with the grain of nature and not apart from it. I have yet to hear anyone provide an argument that makes it ethically unsound, however uncomfortable they may feel about it. I have yet to find someone who can scientifically disprove the work of Aubrey Meyer."

Tim Smit Chief Executive and Co-Founder of the EDEN Project

<http://candcfoundation.org/pages/indextimsmit.html>

"Let us recognize that a global deal has to be fully inclusive, demonstrate how we calculate burden-sharing and be equitable as no-one will accept a deal that builds in their disadvantage. That framework is Contraction and Convergence."

Too Little, Too Late: The Politics of Climate Change

Colin Challen - Former Chair UK HoC All Party [2008] Parliamentary Group on Climate Change

http://www.amazon.com/Too-Little-Late-Politics-Climate/dp/0956037003/ref=sr_1_1?s=books&ie=UTF8&qid=1285911902&sr=1-1

"Several ideas derived from C&C have surfaced since Kyoto with ideas that can be perhaps in various ways incorporated into C&C. However, there is an overwhelming need for an over-arching UNFCCC-compliant Framework that enables the globally competing interests of the over-consuming and the under-consuming to be reconciled with each other and with the objective of the UNFCCC in a non-random manner. We feel that C&C is the veteran and indeed the apex example of this and urge you to consider our request. At Kyoto in December 1997 and shortly before they withdrew from these negotiations, the USA stated, "C&C contains elements for the next agreement that we may ultimately all seek to engage in." The adversarial reasons for their withdrawal then were in play again at COP-15: http://www.gci.org.uk/public/COP_15_C&C.swf

C&C answers this in a unifying and constitutional way and the need for this answer becomes increasingly critical."

Tim Yeo MP [2010] Chairman Commons Energy & Climate Change Committee

<http://www.gci.org.uk/politics.html>

UNFCCC-compliant Global Climate Change Framework

We all face an increasingly urgent situation with the threat of runaway rates of climate change occurring and the persistent failure to come to terms internationally to deal with this. There is an international need to establish a UNFCCC-compliant Global Climate Change Framework to redress this threat as soon as possible. Contraction and Convergence is a prime example of this. It is a rational formulation for reconciliation of 'Climate Justice without Vengeance'.

Sir Martin Rees from letter to Secretary of State -with 200 others

<http://www.gci.org.uk/politics.html>

"Some proposals compensate the potential burden on developing nations with generous emissions allocation, whether as a simple strategy to obtain developing countries support for the regime or in a realisation of the global equity principle borrowed from social justice. A famous such proposal is "Contraction and Convergence" developed by Aubrey Meyer.

Act Locally Trade Globally - Emissions Trading for Climate Policy Organisation for Economic Cooperation and Development IEA

http://books.google.com/books?id=Mpba74EPLZAC&pg=PA174&dq=contraction+and+convergence&hl=en&ei=KQfcTd3rDIyq8APUhoUD&sa=X&oi=book_result&ct=result&resnum=3&ved=0CDIQ6AEwAji-AQ#v=onepage&q=contraction%20and%20convergence&f=false

Contraction and Convergence is a beautiful model."

David Miliband at the Green Alliance

"One of my first parliamentary questions as a callow backbencher was about contraction and convergence [C&C - the proposition that regions with high per capita carbon emissions must contract them progressively to converge with those of current low emitters at a level that is globally sustainable]. I think any international agreement is going to have those principles at its heart - shared responsibility, equitable burden-sharing."

David Miliband in Green Futures

<http://www.forumforthefuture.org/greenfutures/articles/602814>

"There is an attractive justice element to the contraction and convergence idea."

Ed Miliband - HoC Environmental Audit Committee 27 10 2009

<http://www.parliament.the-stationery-office.co.uk/pa/cm200910/cmselect/cmenvaud/228/9102706.htm>

Contraction and convergence

Contraction and convergence is a simple approach to distributing the total greenhouse gas emission reductions required internationally, between various countries or groups of countries. The approach is based on two principles: 1 there is an upper limit to acceptable global atmospheric greenhouse gas concentration, beyond which the damage from climate change would not be acceptable 2 the atmosphere is a global commons, so that as individuals we all have equal rights to emit greenhouse gases. Contraction and convergence is arguably the most widely supported, equitable, global approach to tackling climate change and the Mayor supports the principle of contraction and convergence. The contraction and convergence proposal was developed by the Global Commons Institute, London. Details of its origins, methodology, and support are available online at <http://www.gci.org.uk>

Green light to clean power - The Mayor's Energy Strategy

http://static.london.gov.uk/mayor/strategies/energy/docs/energy_strategy04.pdf

"There is no shortage of plausible frameworks for a long term global deal on the table, not least the intellectually and morally coherent principle of Contraction and Convergence."

UK Conservatives Quality of Life Challenge

"Blueprint for a Green Economy" on C&C

Jon Gummer David Cameron Zac Goldsmith

http://www.gci.org.uk/Documents/blueprintforagreenecconomy_.pdf

Contraction and convergence

The contraction-and-convergence approach assigns every human being an equal entitlement to greenhouse gas emissions. All countries would thus move toward the same per capita emissions. Total emissions would contract over time, and per capita emissions would converge on a single figure. The actual convergence value, the path toward convergence, and the time when it is to be reached would all be negotiable.

World Bank Development Report 2010

<http://siteresources.worldbank.org/INTWDR2010/Resources/5287678-1226014527953/WDR10-Full-Text.pdf>

"The few studies that are now beginning to assess the health consequences of decisions aiming to mitigate or adapt to climate change use very different analytical methods and assumptions, even for very similar challenges. There is a need to develop more generic guidance on conceptual frameworks and methods in order to improve comparability, and assist decision-makers to achieve the greatest health "co-benefits", and avoid harm. This should cover the full range of potential decisions, from the "macro" level for example global contraction and convergence in carbon dioxide (CO₂) emissions; carbon pricing policy and incentives), to more local and sector specific decisions (e.g. city-level policies to promote public transport, or to protect a natural watershed)."

PROTECTING HEALTH FROM CLIMATE CHANGE Global research priorities WORLD HEALTH ORGANISATION 2009

http://whqlibdoc.who.int/publications/2009/9789241598187_eng.pdf

"When one looks at the kinds of reductions that would be required globally, the only means for doing so is to ensure that there's Contraction and Convergence and I think there's growing acceptance of this reality. I don't see how else we might be able to fit into the overall budget for emissions for the world as a whole by 2050. We need to start putting this principle into practice as early as possible."

Rajendra Pachauri - Global Humanitarian Forum 2008 Chairman Intergovernmental Panel on Climate Change

www.tangentfilms.com/C&Cconcept31mar.mp4

"An approach receiving significant attention, endorsed by the German Advisory Council on Global Change, is some form of contraction and convergence whereby total global emissions are reduced (i.e., contraction) to meet a specific agreed target, and the per capita emissions of industrialized and the developing countries converge over a suitably long time period, with the rate and magnitude of contraction and convergence being determined through the UNFCCC negotiating process. "Contraction and Convergence" (C&C). C&C is a science-based global climate-policy framework proposed by the Global Commons Institute (GCI) with the objective of realizing "safe" and stable greenhouse gas concentrations in the atmosphere. It applies the principles of precaution and equity, identified as important in the UNFCCC but not defined, to provide the formal calculating basis of the C&C framework.

UN Millennium Project on Environmental Sustainability & Energy R. Watson Fmr Chairman IPCC & Chief Scientist, The World Bank

http://www.gci.org.uk/Documents/Watson_2004_.pdf

Contraction and Convergence is the major proposal based on egalitarianism. Developed by the Global Commons Institute, it proposes that all countries should move, over a period of time, towards equal per capita emissions, with total emission levels contracting and per capita emissions converging at a safe level. The model is flexible as to the time-frame and final emission level and potentially allows national circumstances to be taken into account.

Climate Policy - Elsevier

http://books.google.com/books?id=XTY9AQAIAAJ&q=contraction+and+convergence&dq=contraction+and+convergence&hl=en&ei=kcDcTeTyAoSk-gbf7oG7Dw&sa=X&oi=book_result&ct=book-thumbnail&resnum=9&ved=0CEsQ6wEwCDJUAq

Most scientists agree that human-made emissions of greenhouse gases, such as carbon dioxide, methane and nitrous oxide, have to be reduced significantly. The North is the main emitter of these gases and should make the most cuts. Many Southern countries argue that emission targets should be set on a per capita basis within a framework of "contraction and convergence". Accepting this framework may enable an equitable long-term agreement to be negotiated, meeting developing countries' demands for fairness, the need for eventual limits on developing countries' emissions and the prerequisite for an effective, long-term international agreement to avoid dangerous climatic change.

Climate and Equity after Kyoto - Corner House Briefing 03 Aubrey Meyer & Nicholas Hildyard; first published 02 12 1997

http://www.gci.org.uk/Documents/Climate&Equity_after_Kyoto.pdf

"As with all great ideas, C&C is deceptively simple, addresses the root causes of the problem, and is recognized as a grave threat to those vested interests who fear the climate change problem's successful resolution because of the fundamental changes it will wrought on our economic status quo. The sustained effort of GCI over 20 years is a testimony to Aubrey's integrity, commitment, and resolve. The logic and calculus of C&C is inescapable once an objective analysis is undertaken. For years, it was foolishly dismissed as impractical! Somewhat ironically, those who now view the problem with a clear head are increasingly accepting that C&C presents the only politically acceptable solution to the foundational question of how the permissible emissions can be distributed amongst the people of Earth."

Prof Brendan Mackey ANU - Winning the Struggle Against Global Warming - What Will It Take? The Earth Charter Global Dialogue on Ethics and Climate Change Brendan Mackey and Song Li

"Many congratulations on the endorsement from the UK Deputy Prime Minister and on your tremendous commitment sustained over many years to an equitable approach to climate action. Politically C&C is the only credible approach which could be widely accepted."

Professor Sir Andy Haines University College London

<http://candcfoundation.org/pages/endorsements.html#>

"A precise version of the per capita approach, often referred to as 'contraction and convergence' (GCT 2000), has figured in the international debate for some time. It has been promoted by India and has been discussed favourably in Germany and the United Kingdom (German Advisory Council on Global Change 2003; UK Royal Commission on Environmental Pollution 2000). Recent reports have shown increasing support for variations on this general approach, see for example, Stern (2008) and the Commission on Growth and Development (2008). The contraction and convergence approach addresses the central international equity issue simply and transparently. Slower convergence (a later date at which per capita emissions entitlements are equalised) favours emitters that are above the global per capita average at the starting point. Faster convergence gives more emissions rights to low per capita emitters. The convergence date is the main equity lever in such a scheme."

"Garnaut Review" - C&C Chapter

http://www.garnautreview.org.au/pdf/Garnaut_Chapter9.pdf

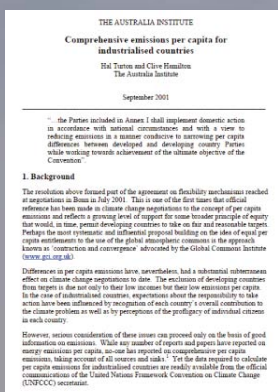

"...the Parties included in Annex I shall implement domestic action in accordance with national circumstances and with a view to reducing emissions in a manner conducive to narrowing per capita differences between developed and developing country Parties while working towards achievement of the ultimate objective of the Convention".

"This resolution formed part of the agreement on flexibility mechanisms reached at negotiations in Bonn in July 2001. This is one of the first times official reference has been made in climate change negotiations to the concept of per capita emissions and reflects a growing level of support for some broader principle of equity that would, in time, permit developing countries to take on fair and reasonable targets."

Perhaps the most systematic and influential proposal building on the idea of equal per capita entitlements to the use of the global atmospheric commons is the approach known as 'contraction and convergence' advocated by the Global Commons Institute."

Australia Institute

http://www.gci.org.uk/Documents/Australia_Institute.pdf

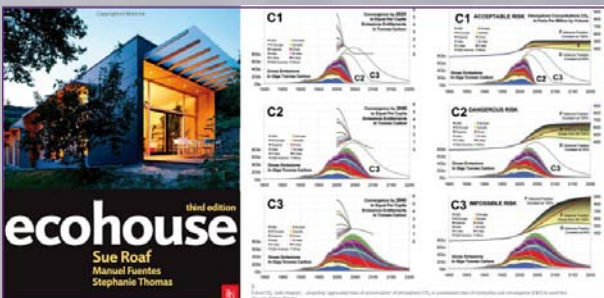

"... More countries might be willing to agree to Contraction and Convergence from the outset than to the supplementary system, while developing countries might agree to join the former in view of the desperate need for a climate change agreement and of the prospect of the supplementary system being introduced in its wake, once international co-operation about mitigation and adaptation was in place. Hence a system of Contraction and Convergence probably remains the best prospect for addressing the global problems of mitigation and adaptation, and at the same time a promising spring-board for achieving a global agreement on addressing the problems of poverty and under-development of the kind that is also urgently needed."

Human Ecology Review, V 17, 2, 2010 105 Robin Attfield

http://www.gci.org.uk/Documents/Attfield_.pdf

For a full account of the theory of Contraction and Convergence see the GCI website

Ecohouse - Sue Roaf

http://www.amazon.co.uk/Ecohouse-Sue-Roaf/dp/0750669039/ref=sr_1_1?s=books&ie=UTF8&qid=1297968679&sr=1-1#_

"Luxury emissions are different from survival emissions, which emphasises the need for a strategy of contraction and convergence, whereby rich countries rapidly reduce emissions and poor countries can increase emissions to achieve health and development gain, both having the same sustainable emissions per person."

Contraction and convergence - Climate change requires two possibly conflicting actions. Carbon emissions must be reduced to avoid the worst outcome of climate change. Poor countries need rapid economic development so that no country, community, or individual is too poor to adapt to climate change. The concept of contraction and convergence, developed by the Global Commons Institute, considers the need to pursue both these actions simultaneously. Contraction and convergence reduce overall carbon emissions to a sustainable level but do so according to an equal share of emissions per person globally. Industrialised countries would dramatically reduce their emissions whilst developing countries would increase theirs to allow for, and stimulate, development and poverty reduction."

<http://www.climateandhealth.org/>

"There is a way of cutting global greenhouse gas emissions that is equitable, sensible and workable. It is called Contraction & Convergence, or simply C&C. It is the brainchild of the South African musician Aubrey Meyer, founder of the London-based Global Commons Institute. Meyer grasped the urgency of finding a viable solution to climate change earlier than most of us realised that there was a problem."

Seven Years to Save the Planet - Bill McGuire on C&C

http://www.gci.org.uk/Support/McGuire_Book.CandCsection_.pdf

Environmentalist Aubrey Meyer believes that he has a more comprehensive 'world-saving idea' that could really cut the Gordian knot of international climate negotiations. Under the auspices of the Global Commons Institute, the London-based lobbying group he helped to set up with friends from the Green Party in 1990, Meyer has been promoting a simple and powerful concept which has already had a major impact on senior politicians and negotiators. GCI's eye-catching computer graphics illustrate past emissions and future allocation of emissions by country, achieving per capita equality by 2030, for example. After this date, emissions drop off to reach safe levels by 2100. This so-called 'contraction and convergence' in emissions has gathered the support of a majority of the world's countries, including China and India. It may be the only approach that developing countries are willing to accept."

Private Planet - David Cromwell

<http://www.private-planet.com/>

"The idea behind 'Contraction [of emissions] and Convergence [of rights to emit], is now main-stream. Like all successful ideas, it now has many would-be fathers. But it was Aubrey Meyer and GCI who took it to market and sold it."

Climate Wars - Gwynne Dyer on C&C

http://www.gci.org.uk/Support/Dyer_.pdf

The "Contraction & Convergence" proposal, developed by Aubrey Meyer, assigns every human being an equal entitlement to GHG emissions. All countries should thus move towards the same per capita emissions. Total emissions should contract over time, and per capita emissions should converge on a single figure. The actual convergence value, the path towards convergence, and the time when it is to be reached would all be negotiable. The proposal allows for the trading of emissions entitlements using mechanisms of the kind permitted under the Kyoto Protocol. At one level, this is compelling. It offers a long-term architecture for an international emissions regime, potentially robust across several of the equity dimensions identified in this paper. It would not require developing countries to shift their immediate focus away from their basic needs: their emissions constraints would bite gradually as per capita emissions increased. And by emphasizing entitlements as well as commitments, it could help address the sense of inequity that arises from the unrequited "carbon debt" of past emissions by industrialized countries. Ultimately, almost any conceivable long-term solution to the climate problem will embody, at least in crude form, a high degree of contraction and convergence. Atmospheric concentrations of GHGs cannot stabilize unless total emissions contract; and emissions cannot contract unless per capita emissions converge. The C&C proposal plays an important role in the climate process. It focuses attention on the ethical questions at the heart of the climate problem, which no long-term solution can afford to ignore. If supported by a critical mass of countries, it would become an important force in the negotiation. The ideas behind the proposal will remain relevant to any discussion of climate and equity for as long as the search continues for a global response to climate change.

Beyond Kyoto PEW Centre

http://stephenschneider.stanford.edu/Publications/PDF_Papers/EquityandClimate.pdf

"Developed by Aubrey Meyer and the Global Commons Institute the Contraction and Convergence [C&C] is perhaps the most simple yet sophisticated framework which tackles the seemingly impossible task of stabilising the atmospheric concentrations of carbon dioxide and averting the irreversible trends of runaway climate change."

Rising Tides Rory Spowers

http://www.amazon.co.uk/Rising-Tides-Rory-Spowers/dp/1841954020/ref=sr_1_113?s=books&ie=UTF8&qid=1298896628&sr=1-113#_

"Of all the regimes, the 'contraction and convergence' regime has been analysed most often. The most crucial reason is its simple formulation - which makes it a good reference for any form of allocation. The first step in the 'contraction and convergence' regime is to establish a long-term global emission profile. Then emission rights are allocated so that the per capita emissions converge from their current values to a global average in a specified target year [Meyer 2000]."

"Global Climate Governance Beyond 2012" on C&C Frank Biermann, Philipp Pattberg, Fariborz Zelli

http://www.amazon.com/Global-Climate-Governance-Beyond-2012/dp/0521190118/ref=sr_1_1?s=gateway&ie=UTF8&qid=1285747305&sr=8-1

"We chose one of the many possible options for the international regime of differentiating future commitments [post 2012]: the Contraction & Convergence approach. It is a widely known and transparent approach that defines emissions allowances on the basis of convergence of per capita emissions allowances [after 2012] of all countries [including the USA] under a contracting global emissions pathway (Meyer 2000)."

Avoiding Dangerous Climate Change Schellnhuber, Cramer, Nakicenovic, Wigley, Yohe

http://www.amazon.com/Avoiding-Dangerous-Climate-Joachim-Schellnhuber/dp/0521864712/ref=sr_1_1?s=gateway&ie=UTF8&qid=1285740598&sr=8-1#_

Key Recommendations

In light of the growing human impact of climate change and the pressures of this crisis for humanitarian and development work, the following is a list of key recommendations made by the different discussion groups at the 2009 Forum.

Climate vulnerable coalition

Those nations most vulnerable to the impacts of climate change should form a common front in order to increase awareness on the impact and risks of climate change, share expertise relating to climate change policy, and influence the development of safe and equitable international climate change policy, in particular with the strongest possible impact on the 2009 UN Climate Conference at Copenhagen COP-15.

Future international climate change agreement

- 1. The principle of contraction and convergence with a population base year should provide the basis framework for global greenhouse gas emission reductions*
- 2. "No deal is better than a bad deal": it would be more constructive to avoid conclusion at the 2009 UN Climate Conference at Copenhagen of any climate change agreement that would not provide for basic levels of safety, equity and predictability*
- 3. All parts of civil society should make a concerted attempt to create wide multi-stakeholder partnerships for concentrating pressure for a successful conclusion to the Bali Road Map & COP-15."*

2009 Global Humanitarian Forum Human Impact of Climate Change

http://www.gci.org.uk/Documents/GHF_2009_.pdf

"An example of how the approach to stabilisation for carbon dioxide might be achieved is a proposal called 'Contraction and Convergence' that originates with GCI, a non-governmental organisation based in the UK."

Global Warming; Complete Guide J Houghton on C&C

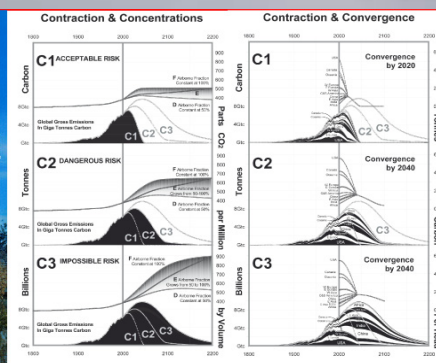

<http://www.gci.org.uk/Support/Houghton.pdf>

"Since enforcing a carbon cap via tradeable permits effectively creates a huge economic value, it should belong to all citizens rather than a small minority. Such a commitment to equity leads to a plan for the sharing of the global commons, such as the Global Commons Institute's Contraction and Convergence – the first approach to tackling climate change that began from the simple notion that each person on the planet had an equal right to produce CO₂. The 'convergence' was the name given to the commitment to share these emissions fairly within a meaningful cap on total output of CO₂. Overproducing countries would then be required to compensate under-producing countries. The 'contraction' is the process of all countries, in step, reducing their emissions gradually over the next 50 years. The scheme is illustrated in Figure 7.2. The rising curve is the historical increase in CO₂ emissions; these are portrayed following a sharp descent over the next century (the contraction) during which time countries also converge towards a share of the global total that represents the size of their population."

Green Economics - Molly Scott Cato

http://www.amazon.com/Green-Economics-Introduction-Theory-Practice/dp/1844075710/ref=sr_1_1?ie=UTF8&s=books&qid=1299088096&sr=8-1#_

"Climate change is a pressing reality. From hurricane Katrina to melting polar ice, and from mass extinctions to increased threats to food and water security, the link between corporate globalization and planetary blowback is becoming all too evident. Governments and business keep reassuring the public they are going to fix the problem. An epochal change is called for in the way we all engage with the climate crisis. Key to that change is Aubrey Meyer's proposed "Contraction and Convergence" framework for limiting global carbon emissions, which he outlines in this book."

"Surviving Climate Change" - Editors Levene & Cromwell

http://www.gci.org.uk/Documents/C&C_Chapter_Levene_Book_.pdf

"Challen presented the alternative policy; namely, 'contraction and convergence', devised by the London-based Global Commons Institute led by Aubrey Meyer: We know that we need to reduce our carbon emissions so that we arrive at a safe concentration in the atmosphere – perhaps 450 parts per million. We also know that without developing countries being part of a global agreement, it won't work. The answer is convergence – we should aim to contract our emissions while converging to a per-capita basis of shared emissions rights. Challen's warning of the consequences, should contraction and convergence fail to be adopted worldwide as a post-Kyoto climate policy, was expressed in extremely stark terms: Our economic model is not so different in the cold light of day to that of the Third Reich :"" which knew it could only expand by grabbing what it needed from its neighbours. Genocide followed. Now there is a case to answer that genocide is once again an apt description of how we are pursuing business as usual, wilfully ignoring the consequences for the poorest people in the world. This was a crucial and hard-hitting message. So how did the mainstream media respond to the parliamentary climate change group's challenge? The environment editors and commentators at the Daily Telegraph, Financial Times, the Guardian and The Times had nothing at all to say. Only the Times published a commentary. This was penned by its anti-green columnist, Mike Hume, rubbishing the parliamentary group as a 'cream-puff army' peddling 'irrational' drivel."

NEWSPEAK in the 21st Century - David Edwards David Cromwell

http://www.amazon.com/s/ref=nb_sb_noss?url=search-alias%3Daps&field-keywords=Newspeak+in+the+21st+Century

"The only solution is a ration system with pollution rights that everyone is seeing as fair. Perhaps the simplest plan for a ration system is known by the term 'contraction and convergence'. The model was developed by a small British group, the Global Commons Institute, and finds support around the world. The contraction half includes a consecutive series of annual targets for global emissions. These objectives begin about where we are now and decrease in the coming decades. They are rated so that the atmosphere never passes the limit of carbon dioxide concentrations that the world has set for itself. The convergence half of the formula implies that the annual allowable global emissions are spread over the countries in proportion to their population. So national targets could start by about 1 ton of carbon per capita and then drop to, say half a ton in 2050 and much less in 2100, according to the agreed global goal. Naturally, the rich countries would in the beginning have not enough rights and poor countries have more rights than they need. So they trade these rights. The demand and supply of pollution rights would provide a significant boost to the global cleaning. Political fantasy? Maybe. But we will need something of that order if we want to avoid climate disasters."

The Last Generation - Fred Pearce on C&C

http://www.amazon.com/Last-Generation-Nature-Revenge-Climate/dp/1903919878/ref=sr_1_2?s=gateway&ie=UTF8&qid=1285740938&sr=8-2

"Looking further ahead, there is a democratic, transparent, and simple form of international agreement that might one day replace Kyoto. Known as Contraction and Convergence (C&C) it has been championed by UK politician Aubrey Meyer for over a decade. In some ways C&C is an ultra-democratic variant of the Kyoto Protocol, for at its heart is the simple idea that the only equitable way to reduce emissions is to grant every human being an equal "right to pollute" with greenhouse gases. As with Kyoto, this right could be traded, though under C&C the volume of trade is likely to be far larger than under Kyoto. When facing a grave emergency, it's best to be single-minded."

The Weather Makers - Tim Flannery on C&C

http://www.amazon.com/Weather-Makers-Changing-Climate-Means/dp/B000FA5G3Q/ref=sr_1_2?s=gateway&ie=UTF8&qid=1285741089&sr=8-2

"A brilliant, imaginative and simple means of reaching such an agreement on emission reductions has been put forward. Known as Contraction and Convergence (C&C), it was first proposed by the Global Commons Institute (GCI) in the early 1990s. Recognition of its unique qualities as a framework for combating climate change has grown at an astonishing rate since that date. It is thought by an increasingly influential number of national and international institutions to be the most promising basis for global negotiations."

How We Can Save the Planet - Mayer Hillman on C&C

http://www.amazon.com/How-Can-Save-Planet-Catastrophe/dp/0312352069/ref=sr_1_1?s=gateway&ie=UTF8&qid=1285741393&sr=8-1

"Among the most intriguing plans offered to date is the contraction and convergence (C&C) model developed by the Global Commons Institute, a British group headed by Aubrey Meyer. It was introduced by the Indian government in 1995 and adopted by the Africa Group of Nations in 1997 during the run-up to Kyoto. The plan has also received votes of support from the European Parliament and several UK and German advisory groups."

Rough Guide to Climate Change - Robert Henson on C&C

http://www.gci.org.uk/Documents/Rough_Guide_.pdf

"The Kyoto agreements have been widely dismissed - with a goodly dose of irony - as 'hot air'. Apologists for them offer several arguments in their favour by way of riposte. It has been said, for instance, that they are, above all, a learning process. In the post-2012 period, the world can come up with more universal and rigorous formulae - negotiations for a post-Kyoto regime are already under way; they began in Bali in 2007. The principle of 'common but differentiated responsibility', it is argued, provides a way forward for the world community. Contraction and convergence puts flesh on this idea."

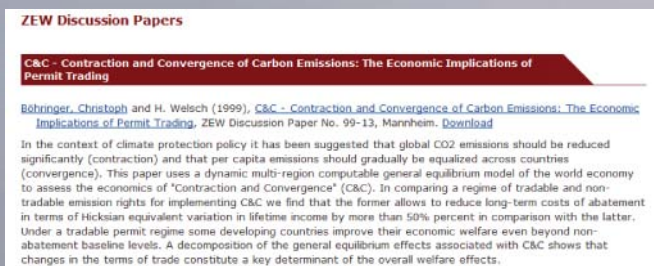

Politics of Climate Change - Anthony Giddens on C&C

http://www.amazon.com/Politics-Climate-Change-Anthony-Giddens/dp/074564693X/ref=sr_1_1?s=gateway&ie=UTF8&qid=1285751136&sr=8-1

"Above all, the Government must draw attention, at home and abroad, not just to percentage targets for the annual emissions in a certain year, but even more to the absolutely crucial issue of the cumulative total budget of greenhouse gases that the world can afford to emit by 2050 if it is to have a reasonable chance of holding global warming to 2o C. In terms of the way in which this cumulative global budget is divided up among individual nations, we recommend that the Government explicitly endorses, and promotes internationally, the Contraction and Convergence method, or a method similar to it."

House of Commons Environmental Audit Committee Beyond Stern: From the Climate Change Programme Review to the Draft Climate Change Bill Seventh Report of Session 2006-07

<http://www.publications.parliament.uk/pa/cm200607/cmselect/cmenvaud/460/460.pdf>

"The Global Commons Institute has devised a greenhouse gas abatement proposal called "Contraction and Convergence" (Global Commons Institute 1997) in which the emphasis is placed not only on a significant contraction of anthropogenic CO2 emissions, but also on an equitable per capita distribution of the resulting global carbon budget. The latter implies a transition to a point (convergence) where future entitlements to emit will have become

proportional to population. The uniform per capita allocation of emission rights reflects egalitarianism in the sense that all people have inherently an equal right to pollute. The egalitarian criterion per se has a strong philosophical appeal. However - under contraction of the global carbon budget - it is unlikely to be acceptable for industrialized countries with currently high per capita emissions unless the transition path allows for long-term "smooth" adjustment towards the terminal point. Equity considerations are not only ethically founded; they also conform to the idea that equity might "serve a positive role as a unifying principle that facilitates an international greenhouse warming agreement."

ZEW discussion paper No. 99-13 C&C - Contraction and Convergence of Carbon Emissions: The Economic Implications of Permit Trading - Christoph Böhlinger and Heinz Welsch

<ftp://ftp.zew.de/pub/zew-docs/dp/dp1399.pdf>

Aubrey Meyer's visionary Contraction & Convergence proposition (see 'The Case for Contraction and Convergence,' in David Cromwell and Mark Levene, eds., Surviving Climate Change, The Struggle to Avert Global Catastrophe, London: Pluto Press, 2007, is not only at fundement about piku'ah nefesh, it also in its insistence on an time-ordered

reconciliation of all humanity by way of equal carbon entitlement is nothing less than eschatological in its vision of a world community which has arrived at its ethical end-goal. But Meyer's proposition, of course, does not openly speak in these prophetic terms. Utterly grounded in the climate science, its purpose is to find a practical framework by which yearly, incremental carbon reduction can be brought to safe-limits.

And its method is social justice. While all humanity will converge to a common carbon point, it will be the rich countries who will have to do almost the entirety of the 'contraction' to meet the overall targets, and in the process – through the tradability of entitlements – enabling the poor and disadvantaged the investment not only for clean sustainable technologies but a belated meeting of their fundamental right to wellbeing. A Jewish community which takes to its soul this ideal of and makes of it a goal of practical implementation is one which is truly fulfilling its time-honoured purpose. It would also in the process be helping to break an actual log-jam. Contraction and Convergence has been much theorised but what is arguably needed now is visible evidence that it can be made to work in a Western environment where the 'sacrifice' has to be made. Normative Judaism through its historic orthopraxy is particular suited to this exercise. Traditionally Jews lived by a very tight code of rules and observations governing every aspect of conduct and behaviour in their daily lives. Large numbers of the religious still do so. Re-orientating these guidelines to a template governing a sustainable life-style would not as an idea be that revolutionary. In the sense that it would actually involve a thorough-going programme of transition to low-energy living it would be as far-reaching as could be conceivably imagined.

Can Jews help to stop Climate Change?

<http://www.biggreenjewish.org/viewarticle.php?id=2499>

"The project's outputs will be a key input to the UK Government's future policy on security and diversity of energy supply and on climate change including its response to the Royal Commission on Environmental Pollution (RCEP) report on 'Energy, the Changing Climate. The centrality of carbon and the climate change issue'" The UK practices a 'leading' approach to climate change. This approach to climate change implies 3 separate policy time-lines with measures to: - comply with agreed targets; prepare for future targets not yet agreed but probably involving not all countries and operating for limited time periods, and prepare for a world of long-term emission limits agreed between all countries, possibly based on the principles of contraction & convergence. There is no clear dividing line between these phases. Post-Kyoto targets affecting the UK could be finalised by 2005 but agreement might take longer, perhaps a lot longer, and the scale of the next targets is uncertain. Also, it is possible we could be in a world of long-term universal targets by 2010. There is even a remote possibility of moving directly to the final phase from the current position. In the same way, it is far from clear what the scale of future targets will be. The RCEP suggested a 60% reduction for the UK by 2050 would be needed within a contraction & convergence agreement, but the exact figure is very uncertain. All that is certain, whether we move to a contraction & convergence world, as suggested by the RCEP, or follow the guidance produced by the IPCC about global levels of emission reductions that will be needed to avoid dangerous climate change, is that developed countries will need to make very substantial cuts from current emission levels over the century ahead."

PIU Energy Review UK Cabinet Office

"Contraction & Convergence is the buzz phrase on many negotiators' lips. It has the benefits that every nation is involved from the beginning, that it's a transparent, straightforward concept and that it produces a definite final concentration of greenhouse gases."

The Hot Topic - David King on C&C

http://www.amazon.com/Hot-Topic-About-Global-Warming/dp/0156033186/ref=sr_1_2?s=gateway&ie=UTF8&qid=1285751219&sr=8-2#reader_0156033186

"Within a few years the principle of 'contraction & convergence' (C&C) emerged. From the talented hand of Aubrey Meyer a violinist turned environmental campaigner, came a policy intended to curb the worst effects of global warming. Contraction means lessening the use of fossil fuels and all activities that contribute to the pollution that leads to climate change."

Convergence is the ethic of sharing. When it comes to Earth's resources, the wealthy northern hemisphere countries have developed the habit of gobbling up oil while the countries of the southern hemisphere are largely sparing in their use of 'black gold'. North and south have diverged. Meyer believes everyone in the world is entitled to the same share of those precious resources. He has come up with a common-sense one-size-fits-all formula that will ensure it is so. It is the element of social justice in C&C that was an appealing shift in thinking."

"The Converging World" - John Pontin

<http://www.theconvergingworld.org/node/38>

"One approach to reducing GHG emissions is known as 'Contraction & Convergence'. This involves emissions from industrialised nations reducing (contracting) and emissions from all nations converging to an overall target consistent with stabilising GHG concentrations in the atmosphere. Over time, emissions would contract and converge to an equal share per person. To achieve this equitable distribution, each of us in the UK would need to reduce our average annual carbon dioxide emissions from 10 tonnes to two tonnes. Contraction and Convergence is the science-based, global climate-policy framework, proposed to the United Nations since 1990 by the Global Commons Institute. It is supported by many climate change scientists and policy makers, including the RCEP."

RIBA Climate Change Toolkit

http://www.architecture.com/Files/RIBAHoldings/PolicyAndInternationalRelations/Policy/Environment/2Climate_Change_Briefing.pdf

"This concept, known as Contraction and Convergence, is familiar enough to cognoscenti of global climate negotiations. It was developed by Aubrey Meyer of the Global Commons Institute and expanded in a recent book. It has been adopted as a policy goal by the major developing regions - India, China and much of Africa - and approved by a resolution of the European Parliament. It has been urged by the Royal Commission on Environmental Pollution. In March 2001 the Chartered Insurance Institute in a research report on the grim effects of climate change bluntly told Government and industry stakeholders 'to show some leadership by coming out in support of the principle of Contraction and Convergence.'"

A European Initiative with South Federal Trust

http://www.gci.org.uk/Documents/Layton_EFT_.pdf

"Contraction and convergence' developed by the London-based Global Commons Institute, proposes a major contraction of emissions by the rich countries and an eventual per capita convergence by all countries at a level that the atmosphere can safely absorb. This model provides developing countries with some room to grow, while also facilitating a considerable transfer of resources from the high per capita emitters to the low per capita emitters under carbon-trading schemes. In contrast, the Kyoto model is based on targets that individual industrialized countries are prepared to accept, which is a long way short of what is required to protect the Earth's atmosphere. Moreover, some green critics argue that the 'flexibility instruments' introduced into the Kyoto Protocol, such as carbon trading and tree planting, are simply too flexible to guarantee significant reductions of emissions at source, given the weak aggregate targets. They also enable rich nations to 'buy their way out of the problem' rather than set an example for developing countries to follow."

GREEN THEORY ROBYN ECKERSLEY

International Relations Theories: Discipline and Diversity Tim Dunne, Milja Kurki, Steve Smith

http://www.amazon.co.uk/gp/product/0199548862/ref=pd_lpo_k2_dp_sr_1?pf_rd_p=103612307&pf_rd_s=lpo-top-stripe&pf_rd_t=201&pf_rd_i=0199298335&pf_rd_m=A3P5R0KL5A10LE&pf_rd_r=0EAWQ4JYXHTASC05E6PF#_

"The most prominent proposal is that of 'contraction and convergence' [GCI] Under this model, global emissions would be reduced over time, and entitlements to emit would be proportional to population for each country after a transition period—a convergence towards equal per capita allocations across the globe. The underlying ethical position is that each human being has an equal right to the atmosphere, and if access to the atmosphere as a repository for greenhouse gases has to be rationed, then each person should be entitled to an equal share. Industrialized countries would be allocated many fewer permits than their current emissions, and thus have to buy permits from developing countries. India and other developing countries with low per capita emissions are supporting the concept of equal per capita emissions rights, but others with relatively high emissions intensity (such as South Africa) would be unlikely to support this allocation rule. To agree on equity models such as contraction and convergence would thus require a fundamental re-think in rich societies about what their fair share of global resources and the global environment is, to acknowledge that they have been using a far greater share than is rightfully theirs and to drastically reduce their claim on global resources."

Developing Countries and the Future of the Kyoto Protocol FRANK JOTZO (Australian National University)

<http://frankjotzo.weblogs.anu.edu.au/files/2010/08/Kyoto-future-DC-Jotzo-proof-CPAR170107.pdf>

"Atmospheric CO2 levels are reaching critical levels and there must be a strategy to stabilise concentrations to a (relatively) safe level, and with the Kyoto process in limbo, some other process or protocol will be required to arrest the asymmetric pattern of 'Expansion and Divergence' and which leads to a more equitable and less self-destructive use of the earth's resources."

The "Contraction and Convergence" (C&C) Strategy proposed by the Global Commons Institute offers such a process, drawing widespread interest and support, for example from the Indian Government, the Africa Group of Nations and the USA. In December 1997 at the United Nations Framework Convention on Climate Change (UNFCCC) in Kyoto and shortly before they withdrew from the Kyoto negotiations the USA stated: "Contraction and convergence contains elements for the next agreement that we may ultimately all seek to engage in."

"The fundamental attraction of Contraction & Convergence to me is that it's logically based. It's not based on essentially market issues and arbitrary decisions about how many tons of CO2 permits are going to be allowed. It also doesn't have the risk in my view of one of the real issues with trading that some of the poorer nations and poorer peoples of the world will mortgage their future on a futures market of trading permits."

Prof Paul Jowitt - President ICE

http://www.gci.org.uk/speeches/BRUNEL_Lecture_A3_.pdf

The Global Commons Institute (GCI), founded in 1990 by musician Aubrey Meyer after the Second World Climate Conference, is an independent group concerned with the protection of the "Global Commons".

GCI has contributed to the work of the UN Framework Convention on Climate Change (UN FCCC) and the Intergovernmental Panel on Climate Change (IPCC). www.gci.org.uk

"An equitable basis for allocation of future emissions will be important to obtaining the agreement of transition-economy and developing nations – particularly China and India. Ideally the agreement could adopt 'Contraction and Convergence' as the model for determining national emissions allocations."

"RICS Report" - C&C Statement

http://www.gci.org.uk/Documents/RICS_.pdf

"Many scientists believe that an atmospheric level of 450 ppmv (parts per million by volume) of carbon dioxide should be the initial target for prudence; already we are at 380. For long-term allocation, the "Contraction and Convergence" model (C&C) seems appropriate. The name C&C reflects the facts that the annual emissions contract to a safe level, and the per capita shares converge to become equal. C&C has the advantages of simplicity and fairness, gives long-term confidence in emissions reduction and in the short-term can accommodate a variety of 'fixes' as well as facilitating the flow of funds to developing countries."

"Coping with Climate Change" CHARTERED INSTITUTE OF INSURERS - Dlugolecki on C&C

http://www.gci.org.uk/Documents/CII_.pdf

Solution - Contraction and Convergence
First advocated in 1990 by Aubrey Meyer.

"Long-term convergence of per capita emissions is the only equitable basis for a global compact on climate change." Prime Minister India, Manmohan Singh, 30 June 2008

Professor Mike Hulme UEA CIBSE ANNUAL LECTURE 2010

<http://www.cibse.org/content/annuallecture10nov2010slides.pdf>

"The Heads of State or Government affirmed that every citizen of this planet must have an equal share of the planetary atmospheric space. In this context, they endorsed the convergence of per capita emissions of developing and developed countries on an equitable basis for tackling climate change."

Fifteenth Summit South Asian Association for Regional Cooperation (SAARC) - Colombo, Sri Lanka - August 2-3, 2008

<http://www.gci.org.uk/Support/support.pdf>

"What is Contraction and Convergence, and what does it mean for housing? The Global Commons Institute proposes a framework for a global reduction in carbon emissions while simultaneously moving towards greater equity and social justice. The framework known as "Contraction and Convergence" consists of reducing overall emissions of greenhouse gases to a safe level [contraction], while every country brings emissions per capita to a level that is equal for all countries [convergence]. In Britain, this means reducing our current per capita emissions of about 12 tonnes down to 1.5 tonnes. Some countries with low per capita emissions might initially be entitled to a rise in their carbon rations and could sell their surplus to richer countries. Once all countries achieve an equal level of emissions - 2030 is the target suggested by the Global Commons Institute - then the carbon ration for all countries would continue to fall to an agreed safe level. "Contraction and Convergence" represents a break from the vicious cycle where affluent industrialized world reaps benefits from fossil fuels while the developing world pays a disproportionate share of the costs in terms of climate change. In its place stands a virtuous circle where everyone benefits from reducing fossil fuel dependency. Based as it is on a philosophy of equal shares within a global limit, the framework could usher in a new era of global justice."

Local Sustainable Homes: How to Make Them Happen in Your Community - Chris Bird

http://www.amazon.co.uk/Local-Sustainable-Homes-Happen-Community/dp/1900322765/ref=sr_1_2?s=books&ie=UTF8&qid=1290501854&sr=1-2

Gower MP, Martin Caton, together with six other Members of Parliament from across the UK House of Commons, nominated Aubrey Meyer for the 2008 Nobel Peace Prize.

Martin explained, "Aubrey Meyer may not yet be a household name, here in Britain, or indeed, in many other parts of the world. Yet his work is absolutely central to the global fight against climate change." The Nobel Institute recognised how important the climate change challenge is to the future of our planet last year, when it awarded the prize jointly to Al Gore and the Intergovernmental Panel on Climate Change for raising awareness about this environmental threat. "We believe that it would, now, be right to recognise the man who has done most to provide an international solution to averting the disaster of global warming." Aubrey Meyer realised that we need a comprehensive climate change framework if we are to protect our planet. He founded the Global Commons Initiative in 1990 that developed just such a framework known as 'contraction and convergence'. "This is the logical way forward. The human race reduces its carbon footprint towards zero at the same time as greenhouse gas emissions on a per capita basis in developed and developing nations converge. If his initiative was recognised now then it would send exactly the right message to world leaders as we consider what comes after the end of the Kyoto round in 2012."

Martin's fellow nominators are Colin Challen MP (Labour), Peter Ainsworth MP (Conservative), Chris Huhne MP (Liberal Democrat), Michael Meacher MP (Labour), Joan Walley MP (Labour) and Tim Yeo MP (Conservative).

http://www.gci.org.uk/Documents/Nobel_Nomination_APPGCC.pdf

"Stop the blame game! Countries must move away from national interests and have a global view - a globally equitable rate of contraction and convergence that correlates to the 2°C rise path as mentioned in the IPCC AR4."

**International Youth Forum
Shanghai Declaration on Climate Finance 2010**

<http://www.britishcouncil.fi/projects/climate-shanghai-declaration.htm>

"The assiduous campaigning over the last decade by the Global Commons Institute (based on its idea of 'contract and converge', under which the rich nations undertake to reduce emissions even as developing nations are permitted to grow their emissions until such time as per capita emissions converge at the same level) has given this kind of approach some real credibility. So, too, has the growing readiness of developing countries such as Brazil, Indonesia and Argentina to accept emissions targets for their own counties - not least because they too are already beginning to feel the impacts of climate change. The real strength of this approach is that it is based upon a trading system, with rich nations needing to purchase additional carbon credits from poorer nations. This appeals a lot to those campaigning for global economic justice: a global trading system in carbon would begin to shift substantial resources from rich countries to poor countries as nations with wasteful, carbon-intensive lifestyles have to purchase additional carbon credits from nations with low-carbon economies."

**"Capitalism as if the World Matters"
Jonathon Porritt & Amory Lovins**

http://www.amazon.com/Capitalism-as-if-World-Matters/dp/1844071936/ref=sr_1_1?s=gateway&ie=UTF8&qid=1285881788&sr=8-1#_

"Contraction and Convergence", has 3 main components: -

each person on the planet is granted an equal right to emit carbon by virtue of their equal right to use the benefits provided by a shared atmosphere. This principle is treated as intrinsic to the architecture of the approach and not a longer-term aspiration as in the case of Kyoto Plus.

a 'global ceiling' for greenhouse emissions is set based on a calculation of the amount the global environment can withstand without dangerous climate change taking place.

each country is allocated a yearly 'carbon emissions budget' consistent with the global ceiling not being exceeded, and calculated according to each country's population size relative to an agreed base year. The name of the approach comes from the notion that over time, it aims to bring about a stabilisation, and later a contraction, in global greenhouse emissions so that they stay below a safe level; and that, in the longer term, developed and developing countries will converge on a roughly equal level of per capita emissions.

Within this overall approach, a country that wants to emit more than its yearly quota must buy credits from countries that have spare capacity. The country selling the credits is then free to invest the receipts in activities enabling it to develop sustainably. An emissions mechanism is a key feature of all of the proposed successors to Kyoto, but in this version the trading zone covers the whole planet from the outset. The consequence is that Contraction and Convergence offers a unique mixture of equity and flexibility which does not seek a literal convergence in greenhouse emissions, but rather a convergence in the rights of all countries to make use of the atmospheric commons. Unlike a number of competing approaches, Contraction and Convergence, if fully implemented and complied with, could be expected to reduce the risks of dangerous climate change substantially, although it will not prevent many adverse impacts in the short to medium-term. It also has the merit that it adopts emissions targets based on scientific criteria for protecting inequalities between developing and developed countries, and between generations, relative to its rivals. It will also tend to improve, relative to rival approaches, the position of the worst off since research suggests strongly that very many of the worst off will be members of developing countries in a future world blighted by climate change. Finally, it will be attractive to those who wish to bring as many people as possible to the point where they have enough since the measures it will introduce will benefit many millions of people in developed and developing countries who lead, or will lead, lives lacking in what is needed for a decent life without bringing more than a very limited number of people below the sufficiency level."

"Contraction & Convergence - the Global Solution to Climate Change"
Meyer Green Books. C&C pioneered by the Global Commons Institute

Climate Change, Justice and Future Generations - Edward Page

http://www.amazon.com/Climate-Change-Justice-Future-Generations/dp/1847204961/ref=sr_1_1?ie=UTF8&s=books&qid=1285921947&sr=8-1#_

"The One Planet initiative adopts the principle of Contraction & Convergence which means that countries with high per capita emissions will have to reduce their emissions much more rapidly than countries that currently have low per capita emissions. The end result being that per capita emissions from each country will converge at a more equitable level and the global total of emissions will contract. BioRegional will work with partners to agree community specific trajectories. For example, for communities in developing countries a suitable trajectory will have to take into account whether the development is targeted at residents with high impact lifestyles or very low income residents with low carbon emissions."

Common International Targets - ONE PLANET COMMUNITIES

http://www.gci.org.uk/Documents/One_Planet.pdf

The partial success of the "contraction and convergence" model to induce influential climate-change policy-setters to reduce national carbon emissions (GCI 2000) shows that inviting powerful states to being part of the solution rather than part of the problem should be pursued.

A Global Solution to a Global Problem, Meyer 2000*

Getting Transboundary Water Right: Theory and Practice for Effective Cooperation

http://www.siwi.org/documents/Resources/Reports/Report25_Transboundary_Waters_with_WWW.pdf

"The vision of contraction and convergence as a response to climate change, described in this volume, is one that I support. I have also called upon our Church to undertake an ecological audit of some sort; information about how to do this can be found in Part Three. Such local, internal responses are vital if our voice as a Church is to have integrity."

Sharing God's Planet

<http://www.turnbacktogo.com/wp-content/uploads/2009/02/sharing-gods-planet.pdf>

"Those who think contraction and convergence is Utopian simply haven't looked honestly at the alternatives."

Rowan Cantuar - The Archbishop of Canterbury

"Looking towards the upcoming negotiations on the second commitment period, the Contraction and Convergence Model is an important contribution. It corresponds to the initial vision of the Convention that demands the reduction of CO2 emissions of industrialized countries and leaves space for the development of developing countries. It presents a starting point for deliberations and negotiations directed to finding a justice-based global approach to climate change."

World Council of Churches

<http://www.gci.org.uk/Documents/beyondkyoto-nov10-04.pdf>

The film the Age of Stupid offers a good illustration of contraction and convergence so that film-goers come away knowing that there are solutions on offer.

Creation Challenge CTBI

<http://www.creationchallenge.org.uk/?p=165#more-165>

Synod as carried - February 2005

That this Synod: -

1. commend Sharing God's Planet as a contribution to Christian thinking and action on environmental issues;

challenge itself and all members of the Church of England to make care for creation, and repentance for its exploitation, fundamental to their faith, practice, and mission;

2. lead by example by promoting study on the scale and nature of lifestyle change necessary to achieve sustainability, and initiatives encouraging immediate action towards attaining it;

3. encourage parishes, diocesan and national Church organizations to carry out environmental audits and adopt specific and targeted measures to reduce consumption of non-renewable resources and ask the Mission and Public Affairs Council to report on outcomes achieved to the July 2008 group of sessions;

4. welcome Her Majesty's Government's prioritising of climate change in its chairing of the G8 and its forthcoming presidency of the European Union;

5. urge Her Majesty's Government to provide sustained and adequate funding for research into, and development of, environmentally friendly sources of energy;

6. and in order to promote responsible use of God's created resources and to reduce and stabilise global warming, commend to the consumers of material and energy, the approach of 'contraction and convergence';

7. and to the producers of material and energy systems, safe, secure and sustainable products and processes based on near-zero-carbon-emitting sources.

Church of England National Environment Campaign

<http://www.creationchallenge.org.uk/?p=165#more-165>

Before the Framework Convention, the Global Commons Institute in the United Kingdom presented a proposal using 'Contraction' (to a level of global GHG emissions) and 'Convergence' (so that each country converges on the same allocation per inhabitant by an agreed date), aimed at equality in emissions per capita. In this proposal, countries unable to manage within their shares would be able to buy the unused parts of the allocations of other countries. Proposals calling for Contraction and Convergence represent a way to implement per capita equality in the long run. Industrialized countries have nearly locked themselves into a fossil-based infrastructure that requires some lead time to dismantle, even disregarding resistance from power and oil companies. Factors other than population size need to be taken into account, including geographical and climatic conditions, and intensity of the economy. Contraction in carbon emissions is nevertheless a path for industrialized nations to start down. For Contraction and Convergence policies to be implemented, nations would need to agree to stay within safe limits of the climate system. A scientifically derived global carbon budget would be the upper limit for all combined emissions, and that budget would be divided among the countries of the world. Industrialized nations would start the contraction process with more of this global budget but would receive fewer and fewer allowances as time goes on. Industrializing nations would begin at a point of much lower levels of emissions but would in the process of development increase those emissions, receiving a larger share of the emissions budget. While the polluting nations would engage in a process of contraction, the developing nations would eventually converge with the industrialized nations at a point that is safely within the absorptive capacity of the atmosphere.

Wind, Sun, Soil Spirit - Carol Robb

http://www.amazon.com/Wind-Sun-Soil-Spirit-Biblical/dp/0800697065/ref=sr_1_1?ie=UTF8&s=books&qid=1300856818&sr=8-1#reader_0800697065

"Carbon emissions must be reduced to avoid the worst outcome of the climate change. Developing economies need rapid economic development so that no country, community or individual is too poor to adapt to climate change. The principle of 'contraction and convergence', conceived by the Global Commons Institute, UK, considers the need to pursue both these actions, reducing global carbon emissions and ensuring economic development of underdeveloped countries simultaneously."

WHO Climate change is a fundamental threat to human health

http://209.61.208.233/linkfiles/Press_Releases_PR-1513.pdf

Principle of contraction and convergence - *"The principle of contraction & convergence refers to the emission of gases contributing to the greenhouse effect. A fair and pragmatic approach, it is argued, would be to move gradually towards quotas that would not be indexed on GOP, as is the case in the Kyoto Protocol, but rather on population, while gradually reducing the permitted total towards the 60% reduction commended by the Intergovernmental Panel on Climate Change (IPCC). Such a principle may be seen as a consequence of both the principles of environmental justice and the principles of earth as global commons. The particular problem whether future emissions allocations should be based on a per capita basis, as the so-called "contraction and convergence" proposal suggests, or on a country basis, might be seen in a different light if humanitarian aid were internationally organized on a basis of each country's ability to pay. The greater duty of rich countries to contribute to such aid might be politically easier to accept than more stringent emission limits imposed on "more polluting" and "past polluting" countries than LDCs (least developed countries), which would also cost "richer" countries more."*

Contraction and Convergence (C&C) is the science-based, global climate policy framework proposed to the United Nations since 1990 by the Global Commons Institute (GCI).

"Contraction and convergence— sustainability with equity." UNDP - Human Development Report 2008

http://hdr.undp.org/en/media/HDR_20072008_EN_Complete.pdf

"Fairness in allocating emissions targets for all the nations of the world will be the key to reaching agreement on a new climate change treaty. One way forward could be a system based on per capita emissions, with national targets based on population, the so-called "contraction and convergence" formula created by the Global Commons Institute."

From a High Carbon Economy to a Low Carbon Society: Report of the Socialist International Commission for a Sustainable World Society - September 2009

http://www.gci.org.uk/Documents/Report_SWS_Comm.pdf

"One way of allocating emissions could be on the basis of the notion of 'contraction and convergence', This idea was developed by a little known London outfit called the Global Commons Institute, led by concert violinist and engaging orator Aubrey Meyer. With colourful diagrams and impeccable logic, Meyer's argument moved relatively quickly from the margins of the debate, dismissed as unrealistically radical to the mainstream. Contraction & Convergence meant that while overall global emissions would contract to a level consistent with the overall goal of the UNFCCC - to 'prevent dangerous anthropogenic interference with the climate system' - these emissions would converge at a common per capita level. Emissions in the North would thus decline while those in South grew, albeit at a slowed rate. By 2030, per capita emissions across the globe converge, while overall global emissions peak about 2020 and then decline."

Climate Capitalism: Global Warming and the Transformation of the Global Economy- Peter Newell and Matthew Patterson

http://www.amazon.com/Climate-Capitalism-Warming-Transformation-Economy/dp/0521194857/ref=sr_1_3?s=gateway&ie=UTF8&qid=1285883452&sr=8-3#_

"To avoid disastrous climate change, it is estimated that carbon emissions must be limited to no more than around 2.7 billion tonnes by 2030 annually, or a per capita allowance of around 0.33 tonnes per year. The only equitable way of achieving this is through contraction and convergence. Countries like Britain need to reduce emissions to 0.33 tonnes per capita per year, while developing countries increase, until their emissions converge up to the same level. The concept of climate justice, which underpins the "contraction and convergence" idea, needs to be expanded to include justice within countries and not just between them."

Manifesto of Revolutionary Solutions - A World To Win

<http://www.aworldtowin.net/documents/Manifesto.pdf>

"GLOBE International adopted the "Contraction and Convergence" analysis in May 1977. Since then, I and my colleagues have campaigned for its acceptance. This pamphlet is a record of those efforts and provides a short summary of the work of the Global Commons Institute (GCI) in this field. I would like to pay tribute to all the GLOBE parliamentarians who have fought so hard for this cause and particularly to the work of Aubrey Meyer and the GCI team on whose brilliant analysis the campaign is based. "Contraction and Convergence" is the only practical and convincing way forward for the world. It is vital that the G8 leaders recognize this and commit themselves to negotiating ahead of COP-4 the global solution for what everyone accepts is the global problem."

Globe International - Climate Change & the G8

http://www.gci.org.uk/Documents/globe_.pdf

"The notions of the right to climate protection or climate security of future generations and of shared responsibilities in a common world can be combined to assert that, collectively, we have the right only to emit some very small amount of GHGs, equal for all, and that no-one has the right to emit beyond that level without incurring the duty to compensate. We are therefore obliged to pay for the right to emit above that common level. This can be seen as one argument in favour of the 'contract and converge' proposition, whereby 'large emitters' should contract emissions and all individuals in the world should either converge to a common (low) level or pay for the excess (those below that level could sell rights)."

Source: Contraction and Convergence™ (C&C) is the science-based, global climate policy framework proposed to the UN since 1990 by the Global Commons Institute (GCI)

The Economics of Climate Change - Nicholas Stern on C&C

http://www.hm-treasury.gov.uk/d/chapter_2_technical_annex.pdf

"The WBGU recommends that emission rights for the green-house gases covered by the Kyoto Protocol be allocated according to the 'contraction and convergence' [C&C] approach. The C&C model (Meyer, 2000) is based upon a fundamentally equal right of all individuals to emit. This can be derived from the human right to equal treatment, and corresponds to the principle of equity under the UNFCCC (Art. 3(1)), and thus corresponds to the egalitarian principle postulated by the Council."

"Climate Protection Strategies" - WBGU on C&C

http://www.gci.org.uk/Documents/wbgu_sn2003_engl.pdf

Contraction and Convergence

"One of the key issues underlying all post-Kyoto debate is how to make any international approach equitable. In 1990, Aubrey Meyer, at the Global Commons Institute, proposed the original idea of contraction and convergence as a means of achieving this. The concept was adopted during the original Kyoto discussions by India and in 1997 by the Africa Group of Nations. However, it never made it through the final Kyoto negotiations. The central concept of Meyer's proposal is that all GHG emissions should be, capped at the level needed to prevent dangerous climate change within a framework that includes every country and that emission rights should be allocated to each country on a per capita basis."

Felicia Jackson - Conquering Carbon: Carbon Emissions, Carbon Markets and the Consumer

http://www.amazon.com/Conquering-Carbon-Emissions-Markets-Consumer/dp/1847734251/ref=pd_bxgy_b_img_a

"Contraction and Convergence (C&C) is a global framework for reducing GHG emissions to a safe level. C&C was designed by the Global Commons Institute for the Intergovernmental Panel on Climate Change and the UN Framework Convention on Climate Change. Longtime industrialised countries, which have produced the bulk of greenhouse gases, bear a much larger burden in preventing climate change; therefore they will have to play a leadership role, both regarding drastic emissions reduction and development of low- or no-carbon technologies to provide room to poor developing countries for economic development within the boundaries of a global carbon regime. C&C is based on the science of limits and the principle of carbon justice, striving for convergence to equal-per-capita emissions rights, assisted by a medium-term, multistage approach accounting for differentiated national capacities. "Contraction" means global emissions are reduced in total over time so the concentration of greenhouse gas in the atmosphere stabilises at a level low enough and soon enough to prevent dangerous rates of climate change from taking hold. "Convergence" means that subject to this global limit, initial entitlements to emit carbon are distributed to all the countries or regions of the world with an agreed process of convergence to equalise per capita emissions entitlements across the planet. During contraction and convergence, entitlements are assumed to be tradable and hence must be capped, with quotas initially distributed to the government, which then auctions them to users who are allowed to re-sell them. C&C also could work using the carbon tax rather than cap and auction-and-trade."

Climate change and the energy crisis Alleviating climate change Robert Goodland and Simon Counsell

http://www.gci.org.uk/Documents/Goodland_Counsell.pdf

Contraction and convergence

"In order to picture which development paths might bring the world to a greater level of resource justice, it may be useful to employ the model of 'contraction and convergence' (Meyer 2000). This model schematically envisages two different development paths: one for industrial countries, one for developing countries. All nations of the world would adjust their use of resources so that in half a century from now they no longer overstretch the absorption and regeneration capacity of the biosphere. The model assumes no nation has the right to a disproportionate share of the global environment, so each one endeavours – though with individual variations – to achieve the common goal of material and energy consumption compatible with the demands of other countries, while remaining within the carrying capacity of the biosphere."

In the end, there is no justification for any other distribution of globally important resources; the right of all nations to self-defined, self-determined and equal development permits it only to make claims that are socially and ecologically sustainable at a global level. This is what the contraction and convergence argument inspired by Kant comes down to: institutional patterns of resource consumption should be considered unjust if they rest upon rules which cannot in principle be adopted by all other nations. Consequently, the model requires that the industrial countries contract – that is, that they reduce their consumption of resources drastically. Resource justice in the world crucially depends on whether the industrial countries are capable of retreating from overconsumption of the global environment.

The example of greenhouse gases may serve to illustrate the path of shrinking resource consumption. By the middle of the century, the overconsumers must reduce by 80% to 90% the strain they put on the atmosphere by burning fossil fuels, in order to do justice to the precepts of both ecology and fairness. It goes without saying that this figure refers to the global North, i.e. the consumer class in the countries of the South is placed under the same responsibility. On the other hand, developing countries appear in the model as tracing an upward curve in resource consumption. First, poorer countries have an unquestionable right to attain at least a 'dignity line' of resource consumption which should apply to all citizens of the world. Without access to kerosene or biogas, without an energy and transport infrastructure, it is hard to satisfy even the basic needs of modern human life.

Moreover, each country will try to achieve different images and forms of a prosperous society – an ambition that in turn requires access to resources such as energy, materials and land. However, this upward movement ends at an upper line of ecological sustainability for all; natural limits set the framework for justice. As it happens, a number of emerging economies are already about to hit that limit in the coming decade.

The conceptual model of 'contraction and convergence' thus combines ecology and justice. It begins with the insight that environmental space is finite, and it ends with a fair sharing of the environment by the citizens of the world."

Rethinking Development in a Carbon-Constrained World **Edited by Eija Palosuo for Finnish Foreign Affairs**

http://www.gci.org.uk/Documents/Palosuo_Finland.pdf

"Expansion and Divergence have characterised human use of nature throughout history. Humankind has increasingly expanded those parts of the ecosphere dominated, disrupted and destroyed by it. At the same time, levels of natural resource consumption have increasingly diverged within human societies. In response to problems emerging on this development path, the 'Contraction and Convergence' approach has now been postulated for the specific field of climate sustainability. This approach can in fact be applied as a general principle. An overarching environmental policy goal, it would imply reducing excessive overall levels of natural resource consumption while at the same time harmonizing per capita consumption levels worldwide. However, fundamental structural and development circumstances - in the realms of demography, economy, technology, politics and social psychology stand in the way of realizing this concept of sustainability."

Kontraktion und Konvergenz als Leitbegriffe der Politischen Ökonomie der Umwelt - Karoly Henrich

http://www.amazon.co.uk/gp/reader/389518604X/ref=sib_books_pg?p=S002&keywords=contraction+and+convergence&ie=UTF8&qid=1300271320#reader_389518604X

"Contraction refers to the 'full-term event' in which the future global total of greenhouse gas [GHG] emissions from human sources is shrunk over time in a measured way to near zero-emissions within a specified time-frame. The example shows 90% by 2100. Calculating future emissions contraction on the basis of concentrations and sink evidence is a non-random way of responding to the objective of the UNFCCC. Convergence refers to the full international sharing of the emissions contraction-event, where the 'emissions-entitlements' for all countries result from them converging on the declining global per capita average of emissions arising under the contraction rate chosen. Converging at a rate to be agreed - the example shows 2030 - is a non-random way of responding to the principle of 'equity' in the UNFCCC, whilst still meeting its objective." GCI

Coping with Global Environmental Change, Disasters & Security: Threats, Challenges, Vulnerabilities and Risks Hans Günter Brauch, Úrsula Oswald Spring, Czesław Mesjasz

<http://www.amazon.co.uk/Coping-Global-Environmental-Disasters-Security/dp/3642177751>

"Contraction & convergence proposes that equalizing global per-capita emissions across countries would ensure equity in the global climate change mitigation process. It supports climate change negotiations that aim to equalize per-capita emissions at a future date, with the levels of permissible global per-capita emissions and the different years by which the emissions have to be equalized varying according to several formulae. This would allow citizens of all countries, regardless of size or level of development, equal space in the atmosphere, and thus equal responsibility to mitigate. While there are concerns that contraction and convergence may provide incentives to high population growth rates, it is entirely feasible, and indeed widely proposed, to place a limit on population beyond which no further entitlements would be granted. Further, countries with high population growth rates would still have to provide resources for their growing populations. Therefore, the economic incentive to encourage high population growth rates may not even exist."

"Global Sustainability - A Nobel Cause" on C&C

http://www.amazon.com/Global-Sustainability-Schellnhuber-Hans-Joachim/dp/0521769345/ref=sr_1_1?s=gateway&ie=UTF8&qid=1285747266&sr=8-1

That this House welcomes the recent decision of the Synod of the Church of England to support contraction & convergence as the overarching framework to tackle climate change; further welcomes the comments of the Honourable Kalonzo Musyoka, Minister for Environment and Natural Resources, Kenya, given at a meeting for African Environment Ministers in Nairobi in February, supporting contraction and convergence; congratulates Aubrey Meyer, founder of the Global Commons Institute, which formulated the concept of contraction & convergence, on receiving the Climate Change Champion Award made by the Corporation of London, for his work in attracting the support of many government and international agencies for contraction and convergence; and calls upon the Government to seek, during its presidency of the G8, to advance the international effort to avert the dangers of climate change by promoting the constitutional framework of contraction and convergence, which embodies the principle of equal rights to the global commons.

CONTRACTION AND CONVERGENCE An exemplary global framework

'Contraction and Convergence' is a strategy aimed at capping and then reducing carbon dioxide emissions (contraction) and by giving an equal entitlement of the capped carbon to every adult, ensuring that all get fair shares of this capped global carbon allocation (convergence).

Climate change, poverty, war R Stott

JOURNAL OF THE ROYAL SOCIETY OF MEDICINE

Journal List > J R Soc Med > v.100(9); Sep 2007

Volume 100 September 2007

<http://www.gci.org.uk/Documents/JRSM.pdf>

"There is now little doubt that climate change has become a reality. Glaciers are melting all over the world. Weather patterns are becoming more erratic. The IPCC forecasts increases of global mean temperatures of up to 5.8 degrees this century and sea level rises of up to one meter. Half the world's people live within 50 km of seashores and their lives will be severely affected by flooding. Up to a million species of plants and animals could be lost due to climate change. Are viable transitional scenarios available to deal with climate change? Can the widely acclaimed Contraction and Convergence scenario be implemented through international agreement? Can emissions trading be made to work and what are its limits? Could biological and technical carbon sequestration be part of a transitional strategy over the coming decades? Is adaptation to rather than prevention of climate change a realistic scenario?"

World Future Council

<http://www.worldfuturecouncil.org/48.html>

What does "Converging World" mean?

The Converging World concept is large and complex. The converging aspect derives partly from the 'Contraction & Convergence' principle proposed by Aubrey Meyer of the Global Commons Institute (see Schumacher Briefing No 5), which sees, across the world, an equal per capita right to emit 'carbon'. The Converging World idea goes beyond carbon trading, although this is a fundamental aspect requiring emergency attention. It is a vision of a world where everyone has a fair and equal share of all the resources that the Earth can easily provide without jeopardising its potential to support life in all its diversity. It is also a world where everyone has a fair and equal share of, and access to, human created resources such as knowledge. The vision extends to an indiscriminate right, and equal access, to the functions of our institutions for justice, health, education and security. In this converging worldview environmental issues are inseparable from social justice.

Go Zero - The CONVERGE PROJECT

<http://www.climatechangeconnection.org/Solutions/Contractionandconvergence.htm>

Contraction & Convergence is a concept for international agreement on greenhouse gas reduction. It has been gaining ground because it outlines a way to fight climate change that is fair and equitable for everyone on the planet. This YouTube video on C&C is from the film *The Age of Stupid*.

http://www.amazon.co.uk/Business-Climate-Change-Corporate-Responses/dp/1874719578/ref=sr_1_1?ie=UTF8&qid=1302518864&sr=1-1

Re-conceiving growth: contraction and convergence

The dominant development model, based on the unlimited meeting of consumer wants leads inexorably to overconsumption. Yet the continued physical expansion in the global reach of commodity supply systems means that consumers in developed countries continue to perceive resource flows as bountiful, and develop no sense of limits to consumption. Whether as consumers or citizens, people in industrialized economies show no awareness that production systems are ecologically flawed or constrained. In order to achieve fair shares of the global resources available, theories of growth need to be transformed to theories of contraction and convergence, to balance the increases in energy and material use that are needed to raise living conditions among the poor against contractions among the wealthy and super-rich. There is a growing interest in ideas of 'degrowth' (décroissance). Degrowth is a term created by radical critics of growth theory intended to make space for alternative projects as part of post-development politics. Degrowth is (like sustainability) an ethical concept of how the world needs to change. Proponents of contraction want 'to create integrated, self sufficient and materially responsible societies in both the North and the South'.

Re-conceiving growth builds on long-standing arguments about the need for, and feasibility of, 'zero-growth', notably perhaps Herman Daly's work on 'steady-state economics'.¹⁰⁸ Back in 1977, Daly's 'impossibility theorem' pointed out that a high mass-consumption economy in the US style was impossible (at least for anything other than a short period) in a world of four billion people. Since then, lockin to progressivist growth economics has if anything deepened, and so too have the risks that sustainability thinking seeks to address. The idea of a contraction-based society poses a challenge: to find alternative models for the creation of human welfare from industry, technology and nature. Poor countries need to be able to industrialize and grow to meet the welfare needs of their people, but they need a way of doing this that avoids the world-busting models of past industrialization. Rich countries need to see ways forward that maintain quality of life, while shedding the habits and structures that damage the biosphere and corner an unfair share of the resources that are needed by the world's poor.

IUCN - Transition to Sustainability: Towards a Humane and Diverse Worlds J Jeanrenaud W M Adams

<http://www.gci.org.uk/Documents/IUCN.pdf>

"The current state of global overshoot highlights the need for analysis and strategy to bring the human economy within the limits of the biosphere. Similar concerns about global emissions of carbon dioxide have led to a conceptual framework for reducing these emissions known as 'contraction and convergence'. First described by the Global Commons Institute (Meyer 2000), contraction and convergence proposes a framework for stabilizing atmospheric carbon dioxide concentrations through two complementary approaches:

Contraction. The need to reduce humanity's carbon dioxide emissions to a level that will result in the eventual stabilization of atmospheric carbon dioxide at an agreed-upon level (e.g. 550 ppm).

Convergence. The need to collectively negotiate how this reduction in greenhouse gas emissions will be allocated between nations.

Since its initial debut, the contraction and convergence framework has gained increasing recognition and sponsorship from decision makers, particularly in Europe. Influential organizations such as the European Parliament have passed resolutions using contraction and convergence as a basic principle (e.g. European Parliament 1998)."

http://www.gci.org.uk/Documents/Footprint_RS_.pdf

WSPA's Recommendations:

- The economy has to be conceptualized not as end in itself, but as instrumental to achieve a healthy environment and wellbeing for life on earth. Systematic recognition is needed of the social/ethical dimensions of sustainability, e.g. animal welfare.
- Food production needs to move away from industrial, multinational systems towards moderate- and small scale, humane models with local supply chains and markets.
- The rise of the consumption of animal proteins has to be halted by contraction and convergence, thus ensuring a fair share. If a modest increase in consumption of animal products by the poorest people in developing countries is the best way to improve their nutrition, this should be facilitated, and offset by greater reductions in consumption by those better off and better fed.

World Society for the Protection of Animals

Civil Society Consultation Conducted by the UN Non-Governmental Liaison Service For the UN Secretary-General's High Level Panel on Global Sustainability

Contraction & Convergence or 'C&C'

"Minimising man-made climate change is almost certainly the biggest challenge faced by humans. Some impacts

are happening right now (often in parts of the world least equipped to deal with them) because of greenhouse gases already released into the atmosphere. We have to act quickly and decisively to avoid really dangerous climate effects. Developed by Aubrey Meyer of the Global Commons Institute, the Contraction & Convergence model is a widely accepted global framework for reducing greenhouse gas emissions (GHGs) to safe levels in a socially just way. The model provides a global 'carbon budget' with annual reduction targets for CO2 emissions, based on levels considered safe to avert dangerous climate change. Once in the atmos-

where, GHGs can take up to 200 years to decay, so to stay within safe levels we'll have to continue to reduce, or 'contract' emissions year-on-year, to near zero by around 2080."

Fair Shares, Fair Choice is a campaign from Charity Sustainability South West for individuals, organisations, businesses and community groups who support the principle of 'A globally fair and safe carbon share for everyone'

<http://www.fairsharesfairchoice.com/index.asp>

"What is Eco-affluent Convergence? Eco-affluent convergence is the merging of two ideas, eco-affluence and contraction and convergence. The term was created by Green Frontier's

founder, Craig Embleton, to describe the mechanism by which everyone can lead sustainably affluent lifestyles as we wean ourselves of our fossil fuel addiction. Eco-affluence James Martin talks about a globally sustainable civilisation in his book "The Meaning of the 21st Century". He writes that ... "we can have spectacularly affluent civilizations where we don't use more resources than the environment can provide. I call this eco-affluence. There can be new lifestyles of the grandest quality that heal rather than harm our global ecosystem". Contraction and Convergence Contraction and convergence is a term used to describe the mechanism for reducing global emissions of greenhouse gases which contribute to global warming. It is based on the principles of equity and survival, whereby global carbon emissions reduce as the per capita emissions across the global population converge to the same level. Contraction & Convergence is the brainchild of Aubrey Meyer, founder and director of the Global Commons Institute (GCI). The use of the word "contraction" to describe the framework by which we get to a better state goes against the hopes and aspirations of the people who will need to "contract" as it implies a lesser lifestyle. We can wean ourselves off our current addiction to fossil fuels and concurrently move to a higher level of living. Eco-affluent Convergence Putting the two ideas together, to provide sustainably affluent lifestyles for everyone on Earth that are rich in terms of everything that actually counts, we have a mechanism called eco-affluent convergence."

<http://www.greenfrontier.org/eco-affluent-convergence/>

The Findhorn Foundation community were privileged to attend a keynote address to open an exciting training programme, Global Climate Change and the Sustainable Energy Revolution, hosted by CIFAL Findhorn. Our

dynamic May East, Chief Executive of CIFAL Findhorn, organised for Aubrey Meyer to share his address with the whole community. Meyer is best known for his strong voice on a global climate policy framework, Contraction and Convergence. This approach was first presented to the United Nations in 1990. Having not met him before, little did I realise that the violinist serenading the arriving guests was none other than our esteemed guest speaker! It was with delight that I saw him put down his violin and pick up the microphone, and the delight didn't stop there, Aubrey continued to jump between technical climate change campaigner and concert violinist through his hour-long presentation. He told the audience about his first ahaa moment in making a commitment to saving the planet. One night when kissing his four year old daughter good night she asked him, was the planet really was dying? Staggered by the question, he responded by telling her don't worry, we'll sort it out. In that moment his life changed. It was his commitment to his daughter that spurred him on and motivated him to leave his musical career and find solutions to global climate change.

FINDHORN

<http://www.findhorn.org/2007/09/aubrey-meyer-on-climate-change/>

An international commitment to equally sharing our right to the atmosphere, and our right to pollute it, alongside strict targets for emissions reductions, will go a long way to ensuring

the viability of life on earth for future generations. The contraction and convergence mechanism works in line with the principle of sharing and provides the necessary framework for CO2 sustainability.

How to Share The World's Resources: A Proposal

<http://www.stwr.org/economic-sharing-alternatives/how-to-share-the-worlds-resources-a-proposal.html>

If you are concerned about global climate change, you should set yourself a target. However, it is far from clear how to fix the right level.

One school of thought, based around 'contraction and convergence', suggests that if everyone moves globally towards 2 tCO₂e, the CO₂ concentration in the atmosphere might stabilise

around 550 ppm (parts per million), which could lead to a 2 °C rise in average temperatures. By all countries having the same target, this would be inherently fair. But, increasingly, this figure of 550 ppm is seen as too high, with the instability of climate caused at that level unacceptable. A new figure of 350 ppm has been proposed, but this would mean eliminating substantially all anthropogenic carbon dioxide emissions by 2030. GCI has information on contraction and convergence.

Open University - Setting a personal target - C&C

<http://labspace.open.ac.uk/mod/oucontent/view.php?id=426568&printable=1>

"We assume a global 'deal' based on 'contraction and convergence' to limit, reduce and maintain total global emissions within defined limits (the contraction); we also assume that the UK's total share of emissions progressively comes into line with its fair global share (the 'convergence'), with significant transfer payments to developing countries during the process to facilitate their sustainable development."

The Great Transition NEF Recommendation: -

"Agree a global fair deal on climate change with appropriate contraction and convergence targets to avert dangerous climate change, reflecting the UK's 'fair share' of total sustainable carbon emissions."

The Great Transition A tale of how it turned out right New Economics Foundation

http://www.ourfutureplanet.org/newsletters/resources/nef%20The_Great_Transition.pdf

Contraction & Convergence and Shrink & Share

"Contraction & Convergence (C&C) as proposed by Aubrey Meyer from the Global Commons Institute (Meyer 2001) provides a simple framework for globally allocating the right to emit carbon in a way that is consistent with the physical constraints of the biosphere. The approach rests on two simple principles:

- contraction: reducing humanity's emissions to a rate that the biosphere can absorb*
- convergence: distributing total emissions so that each person ultimately gets the same portion of the "global budget".*

Although C&C focuses exclusively on CO₂ emissions, which are responsible for about 50 percent of humanity's Ecological Footprint, the C&C framework can be extended to other demands on the biosphere.

The extension of C&C to all demands on the biosphere is referred to as Shrink & Share. Shrinkage would occur when nations, organizations, and individuals reduce their footprints so that consumption, production, investment, and trade activities do not exceed the regenerative capacity of the globe's life-supporting ecosystems. Sharing would occur if these reductions were allocated in ways considered equitable by the partici-

pants. This includes many possibilities: for example, it might imply that consumption, production, investment, and trade patterns change such that the per capita footprints in various nations deviate less and less from each other, that there is a more equitable distribution of the rights to use resources, or that resource consumption rights are more closely tied to the resources a region or nation has available. Further discussion on Shrink & Share and how this can support risk assessments and ecoinsurance schemes can be found in Lovink et al."

Living Planet Report WWF 2004

http://www.gci.org.uk/Documents/LPR_WWW_2004_.pdf

The Global Commons Institute's famous proposal calls for a "Contraction and Convergence" (GCI, 2003) to a global mean of carbon emissions per capita far below a ton, which would be needed for atmospheric CO₂ concentrations to stay within 450 ppm. However if an energy or carbon threshold for human needs can be estimated, there is no reason to believe it remains constant over time: our goal is to question the immutability of this relationship.

From constraint to sufficiency: The de-coupling of energy and carbon from human needs, 1975–2005

Julia K. Steinberger, J. Timmons Roberts

http://www.gci.org.uk/Documents/EE_SteinbergerRoberts_2010_DecouplingEnergyCarbonHumanNeeds_.pdf

"Contraction and Convergence (C&C) refers to an approach originally proposed by the Global Commons Institute (GCI) but now widely agreed to represent a fair and meaningful way of achieving stabilization targets. Overall emissions 'contract' to a level compatible with the stabilization target, and per capita emissions 'converge' towards an equal per capita shares of the overall emissions budget. Very simply, C&C is a way of transparently structuring future negotiations on the understanding that prosperity is governed by ecological limits on the one hand and fair shares on the other." For more information on the approach see for example Meyer 2004, See also briefings by the Global Commons Institute, online here and here

Prosperity Without Growth: Economics for a Finite Planet

Tim Jackson

http://www.amazon.com/Prosperity-Without-Growth-Economics-Finite/dp/1849713235/ref=sr_1_1?ie=UTF8&qid=1299161576&sr=8-1#_

Contraction and Convergence

Climate change is driven, and its impacts are experienced, to different extents by different populations across the globe. Total emission figures mask a huge heterogeneity in per person energy consumption which varies widely

both within national borders and between them. Equity, including equality of opportunities for development, must therefore be the central pillar around which climate change policy is developed. In response to these discrepancies, 'Contraction and Convergence' presents a framework in which finite bio-spherical capacity is equitably shared amongst all of the earth's inhabitants, thus placing the importance of per capita emissions centre stage. This framework recognizes the right of the developing world to develop economically, and that their per capita emissions will rise as a result.

On the other hand the emissions of the developed world will have to contract, with the overall objective of arriving at an equitable global per capita emission level. Population growth is fundamentally relevant to this model, since total population size will largely determine the cap at which total safe emissions can be set. Again the complexity of this issue is crucial to grasp: in the short term, it will be in the interests of individual countries to have large populations to capture as large a share of the global emissions as is possible. At the global level the reverse is the

case; the larger the global population, the smaller the per capita global emission level will be. PSN will promote increased understanding of the links between population and climate change and advance approaches, such as contraction and convergence, which mirror the PSN 'Population – Consumption Coin' concept by recognizing the twin rights and responsibilities of the developed and developing worlds.

The Population & Sustainability Network

<http://www.populationandsustainability.org/49/background-and-concept/background-concept-of-the-network.html>

"Humanity as a whole is already consuming more resources than the earth can in the longer term provide. Therefore consumption in the richer countries will have to be reduced to allow those in poorer countries to attain a decent lifestyle. Consumption will inevitably grow in developing countries as they industrialise and urbanise, even if they take on board the need for sustainable lifestyles. It will be up to wealthier communities, principally in developed countries, to moderate their lifestyles and adopt consciously green practices. We already know that what one country considers acceptable would be considered far from acceptable to

another. How should the level be set? By whom? On what criteria? The concept of Contraction and Convergence (C&C) was conceived by the Global Commons Institute in the early 1990s. The principle is that the rich should consume progressively far less resources per capita than before, while the poor consume rather more than they did, so we converge towards a common 'fair share' for each, which the planet can sustain. We support this principle of C&C or global equity, but it must take account of the plain arithmetic fact that every additional person reduces everyone else's sustainable share. We have therefore insisted on including a population base year at which the ultimate target figures, notably for sustainable carbon emissions per person, should be calculated country by country. Without it, countries with high population growth would consume ever more, at the expense of those who had succeeded in restraining or reducing their numbers. We were delighted when Kofi Annan endorsed our view in his Chairman's Key Recommendations following a conversation we had with him after a workshop we gave at the Global Humanitarian Forum in June 2009." - **POPULATION MATTERS**

principle of C&C or global equity, but it must take account of the plain arithmetic fact that every additional person reduces everyone else's sustainable share. <http://populationmatters.org/thinking/sustainable-lifestyles/sustainable-lifestyle/>

"The best known rights-based approach to climate change mitigation is the 'contraction & convergence' (C&C) framework presented by GCI at the second Conference of the Parties to the UNFCCC in 1996. The idea, very briefly, was to articulate a long-term mitigation strategy that, while reducing the overall amount of GHG in use over time, would also lend toward equalising GHG emissions per person on a global scale. In such a regime, as overall global emissions dropped, the fall would be more precipitate in wealthy countries, while usage in poorer countries would continue to rise for a period in line with their greater development needs - toward convergence between rich and poor countries at some point in the future. Initially GCI abjured the term 'rights' in reference to C&C, because they regarded the atmosphere as a global commons that 'cannot be appropriated by any state or person. Today, however, GCI claims that C&C 'establishes a constitutional, global-equal-rights-based framework for the arrest of greenhouse gas emissions.

This new formulation appears to be in line with a general shift toward the language of rights in the climate change arena. Whereas the 'rights' at issue in models such as C&C amount to speculative universal 'rights to emit' GHGs, with no obvious basis in human rights law, they might be framed as deriving from the 'right to development', which is mentioned somewhat obliquely in the UNFCCC. Such a derivation would depend on demonstrating that 'subsistence emissions' were in fact required to achieve basic human rights, a claim that is at least plausible.

The right to development is a difficult and somewhat confusing notion. In international law, it has had, since 1986, declaratory (non-binding) status, and has been a subject of protracted and sometimes polarising discussion within the United Nations. But whatever its doctrinal status, discussion of the right to development has evolved with time, albeit rather as a space for negotiating the differing interests of different parties in the international system rather than as law in the ordinary sense. For many, particularly in countries most vulnerable to climate change, it still provides a natural hook for assessing the rights implications of climate change and the policy premises that should underlie solutions."

Human Rights and Climate Change - Stephen Humphreys

http://www.amazon.co.uk/Human-Rights-Climate-Change-Robinson/dp/0521762766/ref=sr_1_30?s=books&ie=UTF8&qid=1288112930&sr=1-30#noop

The equal per capita option is certainly a live possibility. One of the most attractive versions is called "Contraction and Convergence" (C&C), and it rightly receives a lot of attention. As the name suggests, C&C is a model with two parts. The governments of the world begin by reaching agreement on some particular greenhouse-gas target: some global limit to emissions and a date by when this limit must be reached. C&C can then determine how quickly current emissions must contract in order to achieve the target. On the way to the target date, global emissions converge to equal per capita shares. The moral adequacy of this particular proposal depends on how its parts are cashed out. The Global Commons Institute, the largest advocate of C&C, makes a point of emphasizing what we have been calling the sustainability criterion: the greenhouse-gas budget we opt for ought to be tied to our best current scientific thinking, and it ought to be extremely risk-adverse. A large emphasis is not placed on historical responsibility, but certainly C&C requires larger burdens for faster and more substantial reductions on the part of developed countries. It does satisfy at least a large part of the present capacities and entitlements criterion, most obviously because it aims towards equal per capita emissions, but also because it allows for emissions trading. Whatever else it might do, emissions trading tends to narrow the gap between the rich and the poor. Finally, C&C is at least a long way down the road to procedural fairness. Rooted as it is in the notion that everyone has equal access to the atmosphere, there's just no room for either horse trading or bullying. From a moral point of view, C&C has a great deal to recommend it.

The Ethics of Climate Change - James Garvey

http://www.amazon.co.uk/Ethics-Climate-Change-Right-Warming/dp/0826497373#_

"Any framework which involves radical emission reductions would in practice resemble the Contraction and Convergence approach advocated by the Global Commons Institute. Indeed, in terms of domestic policy aims, the UK Government has already implicitly accepted this approach in adopting the 60% carbon reduction target for 2050; and it is therefore inconsistent not to adopt such an approach internationally. We do not see any credible alternative and none was suggested in evidence to our inquiry. We therefore recommend that the UK Government should formally adopt and promote Contraction and Convergence as the basis for future international agreements to reduce emissions."

House of Commons Environmental Audit Committee 4th Report

http://www.gci.org.uk/Documents/EAC_G8_.pdf

"A simple and transparent policy framework for reducing greenhouse gas emissions: If such a framework was implemented, then not only would it ensure that atmospheric levels of greenhouse gases were kept to within a safe level, but all of the steps suggested in the earlier chapter of this book would become the easy options, as they would for everyone else around us. The policy is called Contraction and Convergence and it was devised by the Global Commons Institute. The principle of contraction and convergence has been endorsed by governments, non-governmental organizations, environmentalists, scientists and religious leaders around the world.

You can get some idea of the range of individuals and organizations that support the principle from the Global Commons Institute website. It reads like an international Who's Who of the great and the good. In fact, according to the UK government, the only group that is not convinced about the merits of the approach is the public."

"The Energy Glut" - Ian Roberts on C&C

http://www.gci.org.uk/Documents/Energy_Glut_.pdf

"On the question of global equity, which I have avoided in this book, the reader may want to explore the Web site of the London-based Global Commons Institute. GCI is promoting the concept of "contract and converge" as a way to resolve the dispute between rich and poor countries about how to share the global atmosphere. Under "contract and converge, the per capita emissions of the rich and poor would converge to equality over' say fifty years. During this time, total global emissions would contract. But because poor countries per capita emissions are far below the rich countries' (the average American emits six times as much carbon dioxide as the average Chinese person), the poor countries' emissions would actually rise at first. Though considered a radical idea just a few years ago, contraction and convergence is slowly gaining acceptance."

"Who Owns the Sky?" - Peter Barnes

http://www.amazon.com/Who-Owns-Sky-Common-Capitalism/dp/1559638559/ref=sr_1_2?ie=UTF8&s=books&qid=1285991295&sr=8-2#reader_1559638559

"Policies such as Contraction & Convergence to solve global warming also require simultaneous implementation. As far as any future regulation of transnational corporations is concerned, surely it is difficult to see how any significant regulation could possibly be implemented on any basis other than globally and simultaneously."

SIMULTANEOUS POLICY

<http://www.simpol.org.uk/forum/index.php?board=50.0>

"Contraction and convergence: - The long-term trend in the climate regime will probably reflect the principle that greenhouse gas emissions should converge to a common per capita level. Achieving this target would involve two steps: (1) an emissions quota is specified in accordance with an agreed level of long-term reductions in greenhouse gases in the atmosphere (contraction); (2) emission quotas are distributed among countries in such a way that per capita emission converge by an agreed date (convergence)."

Renewable energy sources in Latin America and the Caribbean: Coordinated by Manlio F. Coviello - ECLAC

"There has been substantial literature internationally concerning "contraction and convergence" of emissions per capita." www.gci.org.uk

"Report for Congress" on C&C

<http://fpc.state.gov/documents/organization/110373.pdf>

"Fortunately, the nations of the world have signed the UNFCCC – the United Nations Framework Convention on Climate Change. This commits all nations to work together in solving the global warming problem. However, national governments now need to agree on a new protocol that commits everyone to reducing the total global emissions of greenhouse gases to a safe level. But what would such a new protocol look like? The answer is called Contraction and Convergence. "C&C" is a framework that forces governments to agree on three vital questions. First, what is a safe concentration of atmospheric greenhouse gases? Is it twice the current concentration? Half the current concentration? The present concentration? Many scientists argue a safe concentration is what it was during the 1960s. The fact is that the Earth system can absorb a certain amount of greenhouse gases without causing harmful change to the climate."

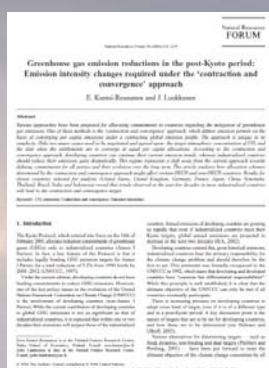

So once a safe concentration is agreed upon, it is then easy to calculate the total global amount of greenhouse gas that can be emitted each year. The second question C&C forces governments to answer is, 'When will the total global emissions of greenhouse gases be reduced to the amount needed to maintain atmospheric concentrations at the agreed safe level?' In 2050? 2100? Next year? The sooner the better, of course, because the longer we wait the more harm is done to people and nature and the more expensive it becomes to fix the problem. The third important question a C&C framework would force governments to reach agreement on concerns how the permissible annual amount of greenhouse gas emissions will be allocated between nations. The simplest and fairest way is to give every person an equal share. This is called a per capita allocation, and is what C&C calls for. One important feature of C&C is that it treats nations fairly. Under this framework, the emission entitlement of people in a poor country will increase relative to what it is now, while that of people in a wealthy country will decrease. This is fair because historically poor countries have not caused the global warming problem and they need to now quickly develop to eliminate poverty. However, under a new C & C-framed protocol, all countries, including developing countries, will be committed to meeting their specified national greenhouse gas targets by the agreed date.

Once a new protocol is in place based on the C&C framework, national governments can then begin the difficult and complex task of negotiating their way through the various implementation issues - that is, working out how to most efficiently and fairly reduce emissions of greenhouse gases to the agreed safe level. In his report to the UK Treasury, Nicholas Stern, former Chief Economist of the World Bank, argued that international co-operation to solve the global warming problem must cover all aspects of policy to reduce emissions including pricing, technology, the removal of behavioural barriers, as well as action on emissions from land use. C&C does not solve all these problems, but provides a framework for their negotiated solution." Details on the Contraction & Convergence framework can be found at the web site of the Global Commons Institute.

"Winning the Struggle Against Global Warming Report to the Earth Charter" Brendan Mackey and Song Li

http://www.earthcharterinaction.org/content/attachments/10/MackeyLi_ClimateReport2007.pdf

"Various approaches have been proposed for allocating commitments to countries regarding the mitigation of greenhouse gas emissions. One of these methods is the 'contraction and convergence' approach, which defines emission permits on the basis of converging per capita emissions under a contracting global emission profile. The approach is unique in its simplicity. Only two major issues need to be negotiated and agreed upon: the target atmospheric concentration of CO₂ and the date when the entitlements are to converge at equal per capita allocations. According to the contraction and convergence approach, developing countries can continue their current emission trends, whereas industrialized countries should reduce their emissions quite dramatically.

This regime represents a shift away from the current approach towards defining commitments for all parties and their evolution over the long term. This article analyses how allocation schemes determined by the contraction and convergence approach might affect certain OECD and non-OECD countries. Results for eleven countries selected for analysis (United States, United Kingdom, Germany, France, Japan, China, Venezuela, Thailand, Brazil, India and Indonesia) reveal that trends observed in the past few decades in most industrialized countries will lead to the contraction and convergence target."

Greenhouse gas emission reductions in the post-Kyoto period: E. Kuntzi-Reunanen and J. Luukkanen

http://www.gci.org.uk/Documents/C&C_NRF.pdf

"A Contraction and Convergence framework of global quotas has the potential to contribute highly to global justice. The recent "make poverty history" movement has demonstrated a moral awakening and a will among the affluent to see justice created worldwide. But with this, as with so many other things, individuals cannot create new systems. Global quotas can create new systems and new forms of wealth and ensure that wealth is evenly pre-distributed to all citizens of the globe. The trading of quotas brings money to poor countries as a right, not as aid. By insisting on equity, Convergence addresses the objections of "less developed" economies to paying for the damage caused by the developed affluent communities. Poor and vulnerable countries and communities are most at risk from the climate change that results from global warming, even though they are least responsible for causing the problem. And those who are already cash-poor have fewer immediate resources for escaping from or coping with the effects of climate change. Trading in quotas is a way to create a rights of greater social justice."

"Enough Is Plenty - Anne B Ryan

http://www.amazon.com/Enough-Plenty-Private-Policies-Century/dp/184694239X/ref=sr_1_1?s=STORE&ie=UTF8&qid=1285909066&sr=1-1#_

The 'Contraction and Convergence' (C&C) approach, which also assigns, in principle, an equal per capita 'right' to GHG emissions to all people, and expects emissions of all countries to converge to that level by a set date, can be seen as an application of the ES approach. (Kuntsi-Reunanen and Luukkanen, 2006; Meyer, 2000; Najam, et al., 2003; Pearce, 2003). Although initially dismissed as idealistic, there are signs that its political acceptability is growing, in part because there seems to be no other way to bring countries like China and India into the fold of a global climate change regime. Many political and business leaders, including the German Chancellor Angela Merkel, have expressed support for the adoption of a global agreement based on the Contraction and Convergence model, recognising that, in global political terms, it is the most realistic basis for forging international consensus on a post-Kyoto climate change agreement (Global Commons Institute, 2008; Spiegel Online International, 2007).

Sharing the atmosphere - Ton Bührs University of Warwick

<http://www2.warwick.ac.uk/fac/soc/csgr/research/workingpapers/2010/26410.pdf>

There are a number of proposals in the market. These include Contraction and Convergence [see Aubrey Meyer 2000].

EU Climate Change Policy - Challenge of New Regulatory Initiatives - Marjan Peeters, K. Deketelaere

http://www.amazon.com/Climate-Change-Policy-Initiatives-Environmental/dp/1845426053/ref=sr_1_558?s=books&ie=UTF8&qid=1301904844&sr=1-558#_

GCI has proposed per capita allocations on what co-founder Meyer has called Contraction & Convergence. He proposes that all nations should converge on a uniform per capita carbon dioxide emission rate at which atmospheric greenhouse gas concentrations are stabilized, which entails great reductions by citizens of high emissions nations and slight increases by those inhabiting the lowest emissions nations. Per capita levels are pegged at the population levels of a base year, neutralizing any allocations benefits gained by allowing population to rapidly increase.

Postmodern Climate Change - Leigh Glover

http://www.amazon.com/Postmodern-Routledge-Research-Environmental-Politics/dp/0415357349/ref=sr_1_619?s=books&ie=UTF8&qid=1301907844&sr=1-619#_

"Colin Challen, chair of the All Party Parliamentary Climate Change Group in Britain, in a speech on March 28, 2006, called for the Contraction and Convergence plan of the Global Commons Institute based in the UK, (www.gci.org.uk), which calls for globally shared "emission rights" for every man, woman, and child, so that poorer people could sell theirs to the richer thereby converging on equitable reductions of CO₂."

Ethical Markets: Growing the Green Economy - Hazel Henderson

http://www.amazon.com/Ethical-Markets-Growing-Green-Economy/dp/1933392231/ref=sr_1_1?s=books&ie=UTF8&qid=1285911394&sr=1-1#_

"C&C - Given the obvious shortcomings of an immediate "equal per capita allocation of emission rights that would be compatible with scenarios leading to stabilising GHG concentrations at low levels, their proponents usually see it as a longer-term objective (Meyer, 2000). Allocation for near-term targets would thus be an interpolation between current emission levels and a longer-term equal per capita allocation."

OECD "Beyond Kyoto" - Energy Dynamics & Climate Stabilization

http://philibert.cedric.free.fr/Downloads/Beyond%20Kyoto_NS.pdf

"One way of ensuring climate equity or justice assumes equal rights to the global commons i.e. the oceans, space and the atmosphere. One influential example of this way of thinking is the Contraction and Convergence approach where the goal is to see net aggregate emissions decline over time below some maximum threshold level that stabilises greenhouse gas concentrations with per capita emissions of Annex I and Non-Annex I countries arriving at equality. A key assumption is that international climate change agreement should be based on the equitable distribution of rights to emit greenhouse gases. It is interesting to note that the idea did not come from a well-resourced international NGO or one of the international agencies, but was forced on the climate-change negotiations by the determination of a few campaigners like Aubrey Meyer, a former classical musician. With some savings, a suitcase, a laptop computer, some support from friends he toured the climate-change negotiations to press his arguments. He and his colleagues could be seen as the Robin Hoods of climate negotiations from the 1990s onwards."

From Science to Sustainability - Stephen Peake Jo Smith OUP

<http://ukcatalogue.oup.com/product/9780199568321.do#>

"Contraction and Convergence" - "This scheme was first introduced by the NGO Global Commons Institute (GCI) in 1990 and has been refined further into what is popularly termed "contraction and convergence." According to GCI, it is not possible to tackle the climate issue without adhering to these two key elements—contraction (environmental integrity) and convergence (equal per capita entitlements) (Meyer 2000).

Options for Protecting the Climate - Mark Malik Aslam WRI

http://pdf.wri.org/opc_full.pdf

"Contraction and Convergence [C&C] would reduce the complexity of climate negotiations to two simple variables that would need to be agreed:

- the target atmospheric concentration of CO₂, and
- the date when entitlements converge to being equal per capita.

The approach offers the best chance of solving a great, and immensely destructive, international paradox. Interestingly, C&C would also fit the stated position of the otherwise recalcitrant United States. In his statements on climate change, President George W. Bush set out specific criteria for what sort of treaty the US would be willing to sign. They included: a truly global deal including emissions targets for developing countries (or, from another perspective, entitlements) and the need for a science-based approach. Contraction and convergence, with its global participation design and formal greenhouse gas concentration target is exactly such an approach."

"Ecological Debt" - Andrew Simms on C&C

http://www.amazon.com/Ecological-Debt-Health-Planet-Nations/dp/0745324053/ref=sr_1_1?s=books&ie=UTF8&qid=1285927340&sr=1-1#_

"Perhaps there would be more consideration of economic contraction by high-consuming societies if there were a collective rethinking of our economic mythology, and an effort among economists to propose both a vision and some key steps for making a transition to a smaller economic scale. There might be less fear of talking about contraction and convergence, of GHG emissions and of human enterprise as a whole, if there is a ladder for Humpty Dumpty to climb safely to Earth, where the pursuit of happiness and fulfilment can go forward without jeopardizing the future."

We Need a Ladder - Ed Dreby Quaker Eco-Bulletin

<http://www.quakerearthcare.org/Publications/QuakerEcoBulletin/QEBArchive/QEB-PDF/QEB8-4-Ladder.pdf>

"The Contraction and Convergence [C&C] plan is driven by the major concern that industrial nations, in particular the US, will devise a way of bring down the world's aggregate carbon emissions and, at the same time, either perpetuate or more likely, intensify - the relative poverty of the developing world. In other words the countries of the North will try to achieve climatic stability on the back of the world's poor. The premise is surely justified historically."

Boiling Point: What We Can Do to Avert Disaster - Ross Gelbspan

http://www.amazon.com/exec/obidos/ASIN/046502761X/celebritywebsi05/#_

"The best-known articulation of the idea is "contraction and convergence," which Aubrey Meyer, director of London's Global Commons Institute, has been tirelessly promoting for many years. The term 'contraction' refers to a reduction of global emissions from today's unsustainable levels to future "safe" levels, while 'convergence' implies that at the same time, developing country emissions allocations would be allowed to increase in the interests of development, while rich-world allocations would drop. The result of these transitions would be a global convergence to equal, and low, per capita allotments. The contraction-and-convergence framework assumes that convergence takes place over some transition period (by, say, 2030) and that allocations are tradable, so that per capita emissions themselves may or may not actually converge."

Dead Heat - Tom Athansiou and Paul Baer

http://www.amazon.com/Dead-Heat-Global-Justice-Warming/dp/1583224777/ref=sr_1_4?s=books&ie=UTF8&qid=1285991870&sr=1-4

"Contraction & Convergence (C&C) principles require reductions from rich countries in order to allow developing countries to increase their emissions and economic growth, ending in convergence on a globally similar per capita level of emissions, (Meyer 2000). This alternative approach would represent a major shift from the current Kyoto Protocol approach. Instead of focusing on the question of how to share the emission, reduction burden as in the present Kyoto Protocol, this approach starts from the assumption that the atmosphere is a global common to which all are equally entitled, and focus on sharing the use of the atmosphere (resource sharing). The approach defines emissions rights on the basis of a convergence of per capita emissions under a contracting global emission profile. With this approach all parties would participate immediately after 2012 with per capita emission permits (rights) converging towards equal levels over time. More specifically, over time. All shares converge from actual proportions in emissions to shares based on the distribution of population in the convergence year."

" . . . the longer time frame and the more broadly accepted ethical underpinnings of Contraction and Convergence [C&C] ought to make negotiations less fraught than those leading up to and subsequent to Kyoto. Is contraction and convergence pie in the sky? There is no doubt that it is a radical approach with far-reaching implications for the management of the Earth's common resources. It would redraw the legal and ethical relationships between nations and initiate an era of supranational management of those environmental issues that cross national borders. Difficult, yes; but what is the alternative?"

Running From The Storm - Clive Hamilton, Dir Australia Institute

"Preventing runaway climate change is essential for a healthy and sustainable future. However, the economic and social policies that will need to be implemented in order to reduce greenhouse gas emissions will also bring substantial health improvements. Specifically, they could bring important reductions in inequalities in health, heart disease, cancer, obesity, diabetes, road deaths and injuries and urban air pollution. These health benefits arise for three reasons: 1 Because Contraction and Convergence, which is the fairest, most clearly articulated and most widely supported global framework for reducing greenhouse gas emissions, has justice and equity at its core and injustice and inequality are major determinants of human suffering and sickness (Global Commons Institute, 2008). 2 Because climate change policies will impact in a health-promoting way on two of the most important determinants of health: human nutrition and human movement 3 Because climate change policy has to include population policy and the promotion of family planning has huge potential to improve global health (Cleland et al. 2006)."

The Health Practitioner's Guide to Climate Change

http://www.amazon.com/Health-Practitioners-Guide-Climate-Change/dp/1844077292/ref=sr_1_1?ie=UTF8&s=books&qid=1287949198&sr=8-1#_

"If a target is set for an acceptable concentration of greenhouse gases in the atmosphere, and an 'emissions budget' set to meet it, it becomes possible to work out for every year from now until the target is met what everybody's logical and equal share is of the atmosphere's ability to soak up our waste emissions. To do this a formula is used so that, in an agreed time-frame, entitlements to emit are pre-distributed in a pattern of international convergence so that, globally, shares become equal per capita. This unavoidable procedure - if chaos is to be avoided - was described and given the term 'contraction and convergence' by the London-based Global Commons Institute. In essence, the world has a carbon cake strictly limited in size. Beyond certain dimensions it becomes rapidly poisonous for everyone, and the only way to begin negotiations on how to cut the cake is to start with the principle that we all have equal access rights. What we do with them is another matter."

Governing for Sustainable Urban Development - Yvonne Rydin

http://www.amazon.com/Governing-Sustainable-Urban-Development-Yvonne/dp/1844078191/ref=sr_1_1?ie=UTF8&s=books&qid=1302789964&sr=8-1

"Clearly, any system for tackling these problems has to treat rich and poor countries differently. India, producing 1.6 tonnes of carbon per person annually, cannot be treated the same as the USA, producing 24.0 per person. Any regulatory system has to include policies for contraction and convergence or 'cap and share. Both approaches propose a year-on-year contraction in permitted emissions levels, leading to an eventual convergence on equal per capita emissions across the planet."

Spirit Level: Why Greater Equality Makes Societies Stronger Kate Pickett and Richard Wilkinson

http://www.amazon.com/Spirit-Level-Equality-Societies-Stronger/dp/1608190366/ref=sr_1_fkmr0_1?ie=UTF8&qid=1286136706&sr=1-1-fkmr0#_

"One increasingly popular proposal for action on climate change involves 'contraction and convergence' (Meyer 2000) which calls for per-capita emissions of each state to be brought to a level that is equal with other states and that the atmosphere can withstand, in practice meaning that emissions in wealthy countries would come down to a safe level (contraction) and in most developing countries would go up to that level (convergence). The notion of contraction and convergence is essentially based on egalitarianism. . What the cosmopolitan corollary would require is that this policy be implemented not only among states but within them as well. This would mean that while most people in rich countries would lower their greenhouse gas emissions to the globally safe per-capita level most people in poor countries would be allowed to increase their emissions to that level. A difference between this approach and international doctrine is of course that poor people in wealthy states would not bear an unfair burden. Conversely, while most people in poor and developing countries would be allowed to increase their greenhouse gas emissions to the globally safe level, a large minority of people - the affluent - in those same countries would be required to reduce them. The precise amounts set for people would reasonably and fairly depend on their circumstances. Some people are in no position to reduce their emissions, and some emissions over the safe per capita limit might be allowed for certain people if there is no alternative. At the same time, it is reasonable and probably necessary to expect some people to reduce their emissions below the globally safe level. The candidates for this requirement will be those who have polluted far more than they should have done already and who have the means (financial technological and so forth) to reduce their emissions below the globally safe level while still meeting their basic needs."

World Ethics and Climate Change - Paul G Harris

POLITICS IN THE GREENHOUSE: CONTRACTING AND CONVERGING

These steps represent Contraction and Convergence (C&C). Although it does have an ethical basis, C&C is essentially a pragmatic approach. Given the need to create a worldwide solution, because of growing emissions from the developing world and the reluctance of the USA to contemplate an approach which is not worldwide, C&C resolves this problem.

Contraction and Convergence
Green Books 2000 Meyer.

A personal account of the climate negotiations. **Energy and Climate Change: Creating a Sustainable Future - David Coley**

http://www.amazon.co.uk/gp/reader/0470853123/ref=sib_books_pg?p=S092&keywords=contraction+and+convergence&ie=UTF8&qid=1297972702#reader_0470853123

"This is a practice that will become more widespread, although whether it will ever achieve the aims of a long-running and laudable campaign by Aubrey Meyer, of the Global Commons Institute, is debatable. His idea is to allow everyone in the world an individual carbon budget. The starting point is that the average American emits 20 tonnes of carbon dioxide each year, the average European 11 tonnes, a Chinese 2.4 tonnes and an Indian just over 1 tonne. Africans produce on average even less. Aubrey's idea is a carbon allocation for the entire world, on the basis of a cut in man-made emissions of 60%. This total is then divided between countries based on the number of citizens that live in it. Over this century each country should reach its allocation. This would allow poor countries to increase their carbon output for the time being as they develop while the already industrialised countries adopt new clean technologies to reduce their carbon footprint. He calls it contraction and convergence. The idea has been widely praised as a possible way forward in international negotiations but so far, for many countries, mostly the profligate emitters, it seems too tall an order."

The fact that Developing Nations have endorsed the Contraction and Convergence [C&C] suggests that it has the potential to overcome the US Senate's stated objection.

Emerging Conflicts of Principle: International Relations and the Clash Between Cosmopolitanism & Republicanism - Thomas Kane

http://www.amazon.co.uk/Emerging-Conflicts-Principle-International-/dp/0754648370/ref=sr_1_114?s=books&ie=UTF8&qid=1298898561&sr=1-114#_

"Perhaps the most interesting lessons for the authors came from being involved in a very small-scale version of the type of negotiations that are taking place internationally as nations try to agree on global emission reduction targets. Although there were only five organizations involved, the negotiations mirrored the international negotiations in many ways. The participants sought an equitable distribution of the burden of climate change response, while arguing for their own special circumstances and the need for differentiation of targets to take these circumstances into account. It is interesting, though perhaps not surprising, that a contraction and convergence approach emerged as the only equitable way to provide differentiation of targets across the participants. Some authors (e.g. Garnaut 2008; Singer 2006) believe that such an approach is the only way to achieve a successful equitable outcome in international negotiations on climate change response and the ATN experience supports this conclusion. However, the key factor that allowed this approach to succeed in the ATN was the commitment of all parties to the ATN partnership and its spirit of collaboration. A similar spirit is sorely needed in international negotiations on climate change response." Contraction and Convergence - A Global Solution to a Global Problem

Universities and Climate Change Chris Riedy and Jane Daly - Walter Leal Filho

"The world is defined by an effective policy commitment to high mitigation through strong policy coordination. In the 'coordinated mitigation world', the international community succeeds in developing a new Kyoto-like regime, negotiated under the UNFCCC entailing greater mitigation action by both the major Industrial Countries as well as Developing Countries. Contraction and Convergence interacting with markets and technology change succeeds in achieving deep emission cuts."

Climate Change Policy in the European Union: Confronting the Dilemmas of Mitigation and Adaptation?

http://www.amazon.co.uk/Climate-Change-Policy-European-Union/dp/0521196124/ref=pd_rhf_p_t_2#_

"I recall a conversation with leading environmental officials in China in the early 1990s in which my Chinese interlocutors stated that anthropomorphic global warming was a substantial problem that required a global response. They said then that China would accept control on levels of greenhouse emissions and be ready to join a global 'system for trading emissions rights, as long as the starting point was equal per capita initial rights. This is not an unreasonable position: but it alone would provide no basis for agreement with developed countries. What sort of principle might guide allocation of a global emissions budget across countries? To be widely accepted as being reasonable, the principles will need to be simple. In the end, they will need to give much weight to equal per-capita rights to emissions. They will need to allow long periods for adjustment towards such positions - within the overriding requirement to stay within an environmentally responsible global emissions budget."

One possible way of bringing together the latter two elements would be the 'contraction and convergence' approach that has been discussed favourably in Germany and India and within which all countries emissions converge on an equal per capita amount at some appropriately defined future time. There will need to be headroom for emissions growth in rapidly growing developing countries within a general principle of equitable sharing of the adjustment burden."

The headroom may take the form of challenging emissions intensity targets for example with emissions intensity of output falling at a rate that exceeds half of the GDP growth rate. A limit would need to be placed on the provision of headroom for rapidly growing developing countries. For example, if the 'contraction and convergence' approach were to be accepted as the first organizing idea and an 'emissions intensity alternative' introduced for rapidly growing developing countries, the 'headroom' could be withdrawn at the point where the developing country rising per-capita emissions reach the (rapidly falling) per-capita emissions of standard (that is, moderate emissions developed countries (Europe, Japan, New Zealand)). The principles will need to embody developed country commitment to investment in research and development and subsequent diffusion of technologies related to greenhouse gas mitigation to developing countries."

International Institutions and Economic Development in Asia **Thanh Tri Vo Editor**

"Sustainable Development is a commitment to improving people's well being, while recognizing the existence of only one planet. Living within global limits requires from humanity to define these limits in realistic terms and find ways to allocate maximum human demand' in ways acceptable to all nations. Contraction and Convergence as proposed by Aubrey Meyer from the Global Commons Institute provides such a framework for globally allocating the right to emit carbon in a way that is consistent with the physical constraint, of the biosphere. The approach rests on two transparent principles:

Contraction: reducing humanity's emissions to a rate that the biosphere can absorb. Convergence: distributing total emissions in a way that is considered fair to all.

The Future of Sustainability- Edited by Marco Keiner

http://www.amazon.co.uk/Future-Sustainability-Marco-Keiner/dp/9048171849/ref=sr_1_19?s=books&ie=UTF8&qid=1296590036&sr=1-19#_

The Contraction and Convergence model (C&C), developed by the Global Commons Institute, seeks to reconcile the goals of greenhouse gas stabilisation and international equity. Figure 7.3 illustrates one possible scenario for projected emissions from various regions of the globe were the model to be adopted.

Environmental Policy - Jane Roberts

http://www.amazon.co.uk/Environmental-Policy-Routledge-Introductions-Environment/dp/041549785X/ref=sr_1_22?s=books&ie=UTF8&qid=1297509863&sr=1-22#_

In 2000 the Royal Commission on Environmental Pollution [RCEP] famously called for a 60 per cent reduction in carbon dioxide emissions by 2050, based on the principle of contraction and convergence". In doing so it paved the way for the 80 per cent target now enshrined in legislation. This illustrates France's bid for cognitive leadership by promoting an argument for policy norms based on fairness. The French approach bears similarities to the 'contraction and convergence' model promoted by Meyer (2000), which views the atmosphere as a global commons and distributes national responsibilities on the basis of international and inter-generational equity. In addition, China and the developing world have a normative preference for the 'contraction and convergence' model. Meyer, A (2000) "Contraction and Convergence - The Global Solution to Climate Change" Green Books

http://www.amazon.co.uk/European-International-Politics-Routledge-Contemporary/dp/B0040BZSYE/ref=sr_1_2?ie=UTF8&qid=1302545450&sr=1-2

"If the complex process of reducing global carbon emissions is to have a fighting chance of succeeding, then it must start with a broad framework agreement, one that nations both big and small can live with. The most likely candidate is Contraction and Convergence (C&C) devised by the Global Commons Institute GCI). C&C is a science-based, global policy framework proposed to the UN since 1990 by GCI with the objective of safe and stable greenhouse gas concentrations in the atmosphere and the principles of precaution and equity. The contraction budget for global emissions will be consistent with stabilising atmospheric concentrations of greenhouse gases [GHGs] at a pre-agreed concentration maximum deemed to be safe, following IPCC WG1's carbon cycle modelling. The international sharing of the budget as 'entitlements' results from a negotiable rate of linear convergence to equal shares per person globally by an agreed date within the time-line of the full-term contraction:concentrations agreement."

The ZEDbook: solutions for a shrinking world **Bill Dunster, Craig Simmons, Bobby Gilbert**

http://www.amazon.co.uk/ZEDbook-solutions-shrinking-world/dp/0415391997/ref=sr_1_143?s=books&ie=UTF8&qid=1297985263&sr=1-143#reader_0415391997

The fact that everyone has to eventually eliminate their emissions and arrive at carbon neutrality makes it a little easier to construct an international policy framework. Achieving carbon neutrality is a grand challenge, but it's one that we can and must meet. The good news is that an international policy framework already exists. In the early 1990s, Aubrey Meyer, founder of the U.K.-based Global Commons Institute, developed "contraction and convergence." The concept is simple and straightforward. First, you determine what level of global warming is tolerable and what is unacceptable. We'll use 2 degrees C as the threshold. Second, you determine the allowable emissions that would keep you within this target. Our analysis suggests 539 billion tonnes of carbon from 2001 onward (484 billion tonnes from 2007 onward). This corresponds to the assumption of a 4.5 degrees C climate sensitivity, the upper bound of the IPCC likely range, meaning that there is less than a 330/0 chance of breaking the 2 degrees C threshold. The final contraction target is carbon neutrality, and we'll assume this occurs in 2100.

Now we must allocate the 539 billion tonnes of carbon emissions to individual countries between 2001 and 2100. This is the convergence phase. On the convergence date, the principle of global equity is evoked, and every person on Earth is given the right to emit the same amount of carbon. That is, per capita carbon emissions for all countries converge to a common number. We'll use 2075 as the convergence year, although there is no reason why it could not be the same as the contraction year, 2100. Finally, a date has to be chosen beyond which additional credits are not gained for increasing your country's population. That is, increasing your allowable emissions by increasing your country's birth rate is not to be encouraged.

Keeping Our Cool - Andrew Weaver

http://www.amazon.co.uk/Keeping-Our-Cool-Canada-Warming/dp/0670068004/ref=sr_1_1?ie=UTF8&s=books&qid=1298872590&sr=8-1

"Contraction & Convergence is the centrepiece of our Climate Justice Project, but it's just a framework, and won't achieve anything unless people know about it and support it. Ultimately, our politicians have to be convinced that Contraction & Convergence is the way forward, and the Climate Justice Project is all about how we achieve this."

The Climate Justice Project

<http://www.climatejustice.org.uk/>

"One of the possible and likely the most prominent approaches is the process of "contraction and convergence" towards equal per capita emissions. This is based upon the assumption that the world's population seeks to stabilise CO₂ concentrations at 450 ppmv (a level that might prevent dangerous impacts). Annual emissions of about 2 Gt carbon by the end of next century and not more than 600 Gt cumulative carbon emissions in the period from 1990 to 2100 would be the upper limit to the world's carbon dioxide emissions. Under the convergence approach, equal per capita emissions would guide the allocation procedure over the long-term, i.e. per capita emissions of the various countries would converge to an amount considered to be sustainable. Obviously, this scenario would demand that industrialised countries curtail emissions significantly. Yet imposing this limit would also necessitate caps on developing countries in the near future. Most developing countries perceive equal per capita emissions in the long-term as an acknowledgement of the "equity" concerns of the Convention." "Contraction and Convergence; A Global Solution to a Global Problem", Global Commons Institute

The Kyoto Protocol - Herman Ott and Sebastian Oberthür

http://www.amazon.co.uk/Kyoto-Protocol-International-Climate-Century/dp/364208575X/ref=sr_1_11?s=books&ie=UTF8&qid=1296834895&sr=1-11#_

"The French approach bears a similarity to the Contraction and Convergence model promoted by Meyer (2000) which favours a transition of GHG emissions by promoting deep cuts on the part of the industrialised nations. This model views the atmosphere as a 'global commons' and seeks to distribute rights for its use on a per capita basis."

France on the World Stage: Nation State Strategies in the Global Era Professor Mairi Maclean, Dr Joseph Szarka

http://www.amazon.co.uk/France-World-Stage-Strategies-Politics/dp/0230521266/ref=sr_1_127?s=books&ie=UTF8&qid=1297972064&sr=1-127#_

Contraction and Convergence (C&C) is one popular and well known policy option which assumes that the only practical and equitable way of allocating carbon is on an equal per capita basis (Meyer, 2004).

It allows nations to choose their own policy path towards low emissions. This more flexible approach then creates the opportunity for lessons learnt to be adopted elsewhere and for policy efforts to be scaled up or down as appropriate. It would ensure some level of global fairness and could provide Britain the opportunity to take a global lead on local action, international climate aid and technology transfer. Once the carbon budget has been allocated between countries, governments can develop their own national policy framework, or band together with other countries to develop regional carbon cap or tax schemes.

ZERO CARBON BRITAIN 2030 A NEW ENERGY STRATEGY The second report of the Zero Carbon Britain project

http://www.gci.org.uk/Documents/ZERO_.pdf

Governments obviously have a key role in both causing and aiding solutions to Climate Change. Just as clearly, companies that are particularly damaging must change their ways and help to reduce the threat. However, we cannot rely on these institutions to do this out of goodwill: we must take action ourselves, both by pressurizing governments and companies, and by changing our own lifestyles. In the summer of 2005 a group of between 60 and 80 cyclists rode from London, England, to the site of the G8 summit in Gleneagles, Scotland. Climate change was high on the agenda for the G8 that year and the riders were joining Upsetting the Offset with 1000's of other people in Scotland to lobby, protest and demonstrate. Their concerns were diverse. Some wanted to lobby the leaders of the G8 to take the environment more seriously and adopt contraction and convergence policies to mitigate what they saw as an imminent climate catastrophe.

Others saw the G8 itself as part of the problem and incapable of offering effective solutions to this or any other problem of late capitalism. As the G8 consists of the leaders of the most polluting, and advanced capitalist, nations, these protestors saw little hope that they would be able to do anything to solve the problems that were a product of the very system they oversaw and which gave them their authority. Instead, they saw a need for a more radical change in which people took direct responsibility for the problems of climate change and sought to create a more egalitarian world in which the rapacious economic growth of the affluent capitalist nations was challenged both through protest and through a strategy of selective disengagement: a process of creating alternative ways of organizing, and developing alternative technologies, in everyday life. See Global Commons Institute (1996) 'Draft Proposals for a Climate Change Protocol based on Contraction and Convergence: A Contribution to Framework Convention on Climate Change', Ad Hoc Group on the Berlin Mandate, 6th September 1996 AGBM/1.9.96/14, Global Commons Institute (2001) References for Contraction and Convergence, 11 August, <http://www.gci.org.uk/refs/C&CUNEPIIIg.pdf> and Meyer, A. campaignstrategy.org

modest suggestions for anyone trying to save the world

Why campaigning on climate is difficult

In Britain and elsewhere in Europe NGOs are getting together to launch joint campaigns to 'mobilise' the public on climate change. In the US, the 'failure' of climate campaigning has sparked controversy over whether 'environmentalism is dead' (see last newsletter). Carl Pope of the Sierra Club has argued there's "something different about climate change".

Here are ten factors which have made it hard to campaign effectively 'on climate'.

It's not an exhaustive list.

1. Scientists defined the issue
2. Governments ran off with the issue
3. There was no campaign [sequence]: NGOs adopted secondary roles
4. The issue had no public
5. The media were left to define the issue in visual terms
6. Governments soft pedalled on the issue
7. Scientists led calls for education of the public
8. Many NGOs tried to make the Framework Convention 'work'
9. Other NGOs tried to connect it with "bigger issues"
10. There is no common proposition

Only extraordinary individuals such as Aubrey Meyer, father of 'contraction and convergence', managed to penetrate this remote citadel. NGOs could prioritise it but they were stuck in someone else's game. Alignment to the problem and solution was largely absent and engagement opportunities were almost absent.

"One widely discussed and advocated framework for tackling climate change which claims a strong foundation in this mythic position of climate change as social justice is that of 'Contraction-and-convergence' (Meyer. 2001). Contraction-and-convergence has been widely endorsed by organizations ranging from the international negotiating bloc of the Africa Group, the Church of England, and from individuals such as Germany's Chancellor, Angela Merkel. The Indian Prime Minister has repeatedly stressed this principle when articulating the negotiating position of his country in international negotiations: 'Long-term convergence of per capita emissions is ... the only equitable basis for a global compact on climate change' (Singh. 2008)."

**The Future of Ethics
Stefan Skrimshire**

"Contraction and Convergence is a concept that refers to a long-term strategy for reducing global greenhouse gas (GHG) emissions. This is a process where overall GHG emissions are reduced (contraction) while emissions reductions from the Global South would be less aggressive than those of the Global North through per capita allocation so as to enable development in the Global South as well as flexibility for a transition from carbon based energy sources to renewable energy sources. This proposal has gained support from a number of policy participants with a particular sensitivity to issues of climate justice and equality. Eventually, all emissions entitlements would converge at an equal per capita emissions level dependent upon particular geography and political economy."

Contraction and Convergence. This proposal originally from the Global Commons Institute in the UK, defines as the goal a target of stabilised greenhouse gas concentration, assesses a global emissions pathway [variation in emissions with time] that would lead to this goal, and allocates emissions pathways to individual countries aimed at converging on the same emissions per capita at some future date such as 2050 or 2100. This would allow some initial increase in emissions per capita, but greater reductions for countries with high emissions per capita.

Climate Change: The Science, Impacts and Solutions A. Barrie Pittock

Contraction and Convergence [C&C] - a system developed by an organisation called the Global Commons Institute that attempts to make the global process of reducing CO2 emissions fair and equitable whether you live in the UK or Uganda. Depending on the level of contraction and the date set for convergence, the C&C system would result in an enormous flow of wealth from high polluters to low polluters, from rich to poor countries, developed to developing nations. The flow would far surpass the amount currently being spent by rich nations on aid. More information on C&C visit www.gci.org.uk

Sustrans is the UK's leading sustainable transport charity

http://www.sustrans.org.uk/assets/files/Publications/The_Network_issue_1.pdf

Avoiding extreme climate change would require the worldwide adoption of significant behavioural and policy changes towards the reduction of greenhouse gas emissions. The only ethically sustainable solution would involve the progressive equalisation of emission rights for all the inhabitants of the planet. The notion of 'contraction and convergence' advanced by Aubrey Meyer is possibly the best proposal in this respect.

Communicating global responsibility? Discourses on climate change and citizenship

Communicating Global Responsibility? Discourses on climate change & citizenship; Anna Carvalho, Uni. Minho, Portugal

http://www.gci.org.uk/Documents/Anna_Carvalho.pdf

Contraction and convergence is a global framework for tackling climate change through the equitable allocation of carbon rations. The 'contraction' component entails setting global carbon budget, reducing or 'capping' this annually to an agreed level so that the planet's climate once again gains equilibrium. 'Convergence' entails giving an equal entitlement of the capped carbon to each of the four billion or so adult inhabitants of the globe. The disadvantaged – generally low carbon emitters – will have entitlements which would allow for economic and social development or which they could sell to high carbon emitters ie. richer, developed countries. The framework implies both carbon rationing and carbon trading. Contraction and convergence is viewed by many as central to discussions on tackling climate change and sustainable development because of its focus on equity www.gci.org.uk

UN Contraction and Convergence - All nations in the world benefit from healthy eco-systems in other countries but they do little to help pay for their preservation. There is a desperate need to create an effective policy for preserving healthy ecosystems by providing incentives and the resources to do so. The Kyoto protocol and what may follow from it is the first attempt to tackle this for the earth's atmosphere to which no one has been able to claim ownership. The Contraction and Convergence approach promoted by UN is a well thought through and potentially powerful approach which also addresses fair distribution. The logic of this underpins this paper's model of convergence to living within environmental limits and the two are mutually supportive. Meyer, BBC

<http://news.bbc.co.uk/1/hi/sci/tech/4994296.stm>

BRUNEL LECTURE 2008 Peter HEAD OBE FREng FRSA Entering the Ecological Age: THE ENGINEER'S ROLE

http://www.arup.com/_assets/_download/72B9BD7D-19BB-316E-40000ADE36037C13.pdf

The history of the climate negotiations shows that such commitments for developing countries, even for the most powerful and resource rich of them, can only be within reach if they are perceived as fair and just. This is a political fact. The concept of Contraction and Convergence may be very difficult to give concrete shape, but the idea needs to be present in the future structure of an international climate regime. Principles of justice must also be reflected at the national level where they raise difficult problems of equality, with far-reaching political connotations.

Fairness in Adaptation to Climate Change

"South African musician Aubrey Meyer has secured the support of several countries and international agencies for his "Contraction and Convergence" strategy to tackle the fundamental causes of global warming."

Ethics in Small and Medium Sized Enterprises - Laura J Spence

http://www.amazon.co.uk/Ethics-Small-Medium-Sized-Enterprises/dp/9048193303/ref=sr_1_24?s=books&ie=UTF8&qid=1300211282&sr=1-24

Significantly this translates exactly into Aubrey Meyer's visionary yet scientific 'Contraction and Convergence' proposition for how humankind might still tackle climate change. See Meyer 'The Case for Contraction and Convergence' in Cromwell and Levene, 'Surviving Climate Change'.

The Oxford Handbook of Genocide Studies - D Bloxham, A Moses

http://www.amazon.co.uk/Ethics-Small-Medium-Sized-Enterprises/dp/9048193303/ref=sr_1_24?s=books&ie=UTF8&qid=1300211282&sr=1-24

Relying on past cases of appropriation or allocation of other unclaimed resources from the "global commons" of Antarctica, the oceans and the moon, Raymond finds link precedent for any of the five standard allocation arguments. Instead the recurring Humean claim to exclusive national property rights based in possession (like those implicit in GHG emission rights) is often opposed by "a more radical egalitarian rejection of any exclusive control that does not benefit all citizens of the world." Such a view can be seen, he suggests, in the Common Heritage of Mankind [CHM] principle that has been proposed for the management of the high sea, and that is reflected in the Moon Treaty. This principled resistance to what Raymond terms the 'enclosure' of the global commons contrasts with schemes that assume private-property-right allocation to be a necessary mechanism for avoiding the "tragedy of the commons," of an over-appropriated atmosphere. Despite its explicit rejection in principle of the private allocation of the atmosphere's absorptive capacity, Raymond identifies several conceptual links between the CHM idea and the "Contraction and Convergence" proposal for an equal per capita assignment of national emissions shares, and sees in this ideal the potential to overcome several prominent normative objections to the privatization of the atmosphere.

Political Theory & Climate Change - S Vanderheiden, J Barry

http://www.amazon.co.uk/gp/reader/0262220849/ref=sib_books_pg?p=S02C&keywords=contraction+and+convergence&ie=UTF8&qid=1300306928#reader_0262220849

Setting out to demonstrate International Leadership on action against climate change, the UK set a national target of 60% reduction in CO₂ emissions by 2050 in its Energy White Paper [2003]. The 60% was derived through a Contraction and Convergence approach [Meyer 2000] to meet the 550 ppmv atmospheric CO₂ concentration stabilisation target [RCEP 2000].

Carbon Capture and Its Storage: An Integrated Assessment

Simon Shackley Clair Gough

http://www.amazon.co.uk/Carbon-Capture-Its-Storage-Environmental/dp/0754644995/ref=sr_1_189?s=books&ie=UTF8&qid=1300371563&sr=1-189#reader_0754644995

Aubrey Meyer takes this tack in advocating Contraction and Convergence. C&C is the idea that each person should get an allowance of greenhouse gas emissions; at first wealthy country citizens would get a larger allowance than citizens of poorer countries but eventually the allowances would converge to one amount, which would contract to the level commensurate with climate stabilization. What Meyer does, in a steady stream of emails and on his web is to point to statements made by others that either explicitly or implicitly refer to this idea. Thus over time he has developed a very long list of people who agree with contraction and convergence.

Debating Climate Change: Pathways Through Argument to Agreement

'Contraction and Convergence' a proposal to reduce GHG emissions in which every country converges on the same per capita allowance of emissions.

Climate Change in Canada - Rodney White

http://www.amazon.co.uk/gp/reader/0195430603/ref=sib_books_pg?p=S02H&keywords=%22contraction+and+convergence%22&ie=UTF8&qid=1300215444#reader_0195430603

It is imperative that any climate mitigation regime take into consideration issues of ethics human right and justice. EcoEquity and the Centre for Science and the Environment lay out a vision for fairness that in their words is equal per capita rights to the atmosphere. Internationally this vision is captured in the proposed "Contraction and Convergence approach which reduces emissions from developed high emissions countries and over time comes to a worldwide equal but much reduced per capita standard [Global Commons Institute Meyer 2000]

Creating a Climate for Change: Communicating Climate Change and Facilitating Social Change **Susanne C. Moser, Lisa Dilling**

http://www.amazon.com/Creating-Climate-Change-Communicating-Facilitating/dp/0521869234/ref=reader_auth_dp#reader_0521869234

The idea of making per capita emissions the basis for equitable burden sharing Is a much-discussed option that Is favored by many developing countries. Such formulas are often referred to as convergence measures. A dynamic example of this approach from the Global Commons Institute is Contraction and Convergence [see suggested reading]. Under this option over time developed countries would reduce emissions in proportion to their population and developing countries would increase emissions according to their population. Eventually, developed and developing countries would converge to the same per capita emissions ratio. For the environmental goals of the UNFCCC to be met, the ratio and length of expected of time until convergence would have to be calculated to ensure the necessary amount of GHG emissions reductions.

Climate Change Economics and Policy: An RFF Anthology **Professor Michael A. Toman**

http://www.amazon.com/Climate-Change-Economics-Policy-Anthology/dp/189185304X/ref=sr_1_222?s=books&ie=UTF8&qid=1301856940&sr=1-222#_

With regard developing and developed nations, carbon emissions and economic growth have been the subject of some discussions about compromise, and indeed it can be found within the Kyoto Protocol. This is the idea of Contraction and Convergence [C&C] [Meyer 2000] The developed, wealthy nations would switch to a low fossil high energy efficiency economy and so contract their carbon emissions.. Meanwhile, the developing nations would be allowed some leeway and so increase emissions. In this way the developing and the developed nations, on a per capita basis, would see their respective emissions converge.

Climate Change: Biological and Human Aspects **Jonathan Cowie**

http://www.amazon.com/Climate-Change-Biological-Human-Aspects/dp/0521696194/ref=sr_1_303?s=books&ie=UTF8&qid=1301893116&sr=1-303#reader_0521696194

Global Commons Institute 'Contraction and Convergence' model is leading the field [Meyer 2000]. Nuclear Or Not?: **Does Nuclear Power Have a Place in a Sustainable Energy Future? (Energy, Climate and the Environment) Professor David Elliott**

http://www.amazon.co.uk/gp/reader/0230241735/ref=sib_books_pg?p=S02L&keywords=%22contraction+and+convergence%22&ie=UTF8&qid=1300218436#reader_0230241735

One suggestion made by a variety of different people is that each person has a right to emit an equal amount of greenhouse gases. This view then takes an egalitarian approach to the distribution of one kind of energy right. This view is remarkably popular. It was for example expressed by Anil Agarwal in their Global Warming in an Unequal World. It also underpins the proposal known as Contraction and Convergence which has been developed and defended by the Global Commons Institute.

The Ethics of Global Climate Change - Denis G. Arnold

An area of interest in Kyoto related discussion concerning mitigation is the notion of targets for per capita emissions. As of 2007, the Kyoto Protocol has no global targets for per capita emissions; existing targets are just for particular countries, specifically developed countries. There is no policy measure that addresses the atmosphere as a whole, since exiting instruments are all based on only a part of the world's emissions. Outside the Kyoto process, particularly in developing countries, a number of authors have written about the desire to create a more equitable approach for "sharing the atmosphere based on establishing that all countries are entitled to the same per capita consumption of energy and materials and are therefore also entitled to equal per capita GHG emissions rights. This approach is known as Contraction and Convergence, an idea initiated by the Global Commons Institute during the 1990s.

Climate Change in the 21st Century Stewart J. Cohen, Melissa W. Waddell

http://www.amazon.com/Climate-Change-Century-Stewart-Cohen/dp/0773533273/ref=sr_1_2?s=books&ie=UTF8&qid=1301827417&sr=1-2#_

Contraction and Convergence. It is unlikely that everyone in the world will ever use identical amounts of fossil fuels. However, it is highly likely that any deal to manage the global commons of the atmosphere will have to be based on this principle. In an agreed time-frame, entitlements to emit are pre-distributed in a pattern of international convergence so that globally they become equal per capita. This procedure is unavoidable if chaos is to be prevented. But it is possible that this framework will succeed without reform of our monetary system.

'Contraction and Convergence' is one such proposal developed by a small London-based NGO called the Global Commons Institute and its charismatic head, the musician Aubrey Meyer. The basic idea which underpins the proposal is that developed countries have to contract their emissions down to an agreed level which would address the UNFCCC's aim of avoiding dangerous interference in the climate system.

Governing Climate Change - Harriet Bulkeley, Peter Newell

http://www.amazon.co.uk/gp/reader/0415467691/ref=sib_books_pg?p=S01M&keywords=contraction+and+convergence&ie=UTF8&qid=1300264931#reader_0415467691

'Contraction and Convergence'. Aubrey Meyer, an English concert viola player among other things, has proposed the concept of Contraction and Convergence [C&C] as a reasonably fair way to allocate and cut carbon dioxide emissions.

A Brief Guide - Global Warming - Heavyweight Issues, Lightweight Read - Jessica Wilson Stephen Law

http://www.amazon.co.uk/gp/reader/1845296605/ref=sib_books_pg?p=S02Z&keywords=contraction+and+convergence&ie=UTF8&qid=1300268167#reader_1845296605

Equal per capita emissions allocations underlie the 'Contraction and Convergence' framework put forward by the Global Commons Institute. Under this approach, annual emissions per capita emissions in different countries converge towards similar levels over time and possibly roughly equate to the rate at which the natural systems can absorb the excess greenhouse gases in the atmosphere, thus stabilising concentrations.

The UK's target of a 60% reduction by 2050 was originally suggested by the Royal Commission on Environmental Pollution (RCEP) as a means to limit the rise in atmospheric concentrations of carbon dioxide to 550 parts per million (ppm) (RCEP 2000) and was adopted by the Government in the 2003 Energy White Paper (DTI 2003c). The RCEP target was based on the assumption that all nations would be contributing to a global reduction in carbon emissions via a framework called 'contraction and convergence'. This ensures that over time, firstly global carbon emissions would contract and secondly, there would be global convergence to equal per capita shares of this contraction (GCI 2001). The UK Government has not yet adopted C&C as its international negotiating position for the period after the Kyoto agreement, despite RCEP's advice. Setting a national target is only part of what is needed to stabilise global atmospheric concentrations of carbon dioxide and other greenhouse gases – it has little value unless it eventually forms part of a strong global agreement, which the UK must work towards achieving.

40% House Brenda Boardman, Sarah Darby, Gavin Killip, Mark Hinnells, Christian N. Jardine, Jane Palmer and Graham Sinden

<http://www.eci.ox.ac.uk/research/energy/downloads/40house/40house.pdf>

"The only other option requires us to make deeper cuts in our emissions in order to allow developing countries some room to expand theirs. This proposal - Contraction and Convergence - has many powerful supporters. Like them I believe it is the only just and politically feasible option."

Carbon Detox - George Marshall

http://www.amazon.com/Carbon-Detox-Improve-Lifestyle-Thinking/dp/1856752887/ref=sr_1_fmkr2_1?ie=UTF8&qid=1286805452&sr=8-1-fmkr2

In the absence of systemic change, there certainly are things that have been done and more can be done in the future to lessen capitalism's negative effects on the environment and people. There is no particular reason why the United

States can't have a better social welfare system, including universal health care, as is the case in many other advanced capitalist countries. Governments can pass laws and implement regulations to curb the worst environmental problems. The same goes for the environment or for building affordable houses.

A carbon tax of the kind proposed by James Hansen, in which 100 percent of the dividends go back to the public, thereby encouraging conservation while placing the burden on those with the largest carbon footprints and the most wealth, could be instituted. New coal-fired plants (without sequestration) could be blocked and existing ones closed down. At the world level, contraction and convergence in carbon emissions could be promoted, moving to uniform world per capita emissions, with cutbacks far deeper in the rich countries with large per capita carbon footprints. The problem is that very powerful forces are strongly opposed to these measures. So such reforms remain at best limited, allowed a marginal existence only insofar as they do not interfere with the basic accumulation drive of the system.

What Every Environmentalist Needs to Know About Capitalism Fred Magdoff and John Bellamy Foster

<http://monthlyreview.org/2010/03/01/what-every-environmentalist-needs-to-know-about-capitalism>

Contraction and Convergence

Aubrey Meyer, a former viola player and composer, has been promoting Contraction and Convergence (C&C) since 1991, soon after he became aware of the dangers that climate change presented, and how little Kyoto would do to solve the problem. C&C would establish an annual global cap on emissions based on the best science; create an entitlement to the emissions that would be shared by all humans, reflecting the principles of justice and equity; allocate each country a share of the emissions based on population; trade the allowable emissions internationally, creating a considerable flow of money from the richer to the poorer nations; and shrink the availability of emissions certificates as the annual allowable emissions level was lowered. C&C has won considerable support, including from some national leaders and many climate leaders. The consensus among its supporters is that C&C should provide the foundation for a future global treaty.

The Climate Challenge: 101 Solutions to Global Warming Guy Dauncey

http://www.amazon.com/Climate-Challenge-Solutions-Global-Warming/dp/0865715890/ref=sr_1_1?ie=UTF8&s=books&qid=1303282299&sr=8-1#_

"The overall effect would be an annual contraction of global carbon emissions, as the different countries converged towards the same amount per person. Unsurprisingly, this approach is known as 'contraction and convergence'. It was devised by a man called Aubrey Meyer. He is one of those extraordinary people whose lack of relevant qualifications appears to work in his favour: he's a concert viola player. Meyer was able to leap over the more constrained proposals of the professionals and produce an idea that was simple, based on science and fair. But while adopting the principle of contraction and convergence would not mean an end to the political arguments, they would no longer take place in a moral and intellectual vacuum. The negotiators would have a target - an equal division of the planet's capacity to absorb pollution - which is both factual and fair. The best estimate of the planet's total carbon sink in 2030 will change as the science improves, but the target can change with it. With an equal global carbon allocation, countries will no longer be able to claim that they can't act because others are not obliged to join in. They might not like this proposal, but they cannot deny that it is even-handed."

Heat George Monbiot

http://www.amazon.com/Heat-George-Monbiot/dp/0141026626/ref=sr_1_3?ie=UTF8&s=books&qid=1287227124&sr=8-3

Several proposals have been made for tackling the problems of global heating which recognize the atmosphere as a global commons. The best know of these is known as Contraction and Convergence [C&C].

Kyoto2: How to Manage the Global Greenhouse Oliver Tickell

http://www.amazon.co.uk/gp/reader/1848130252/ref=sib_books_pg?p=S028&keywords=contraction+and+convergence&ie=UTF8&qid=1300266731#reader_1848130252

"Luckily, a workable solution is currently on the table, one which recognises that equal rights to the atmosphere are integral to efforts to protect the climate from major destabilisation. First developed by Aubrey Meyer of GCI, it has begun to receive tacit support from within the British government, adding to support from the European Parliament. The Africa Group of Nations and the governments of India and China. This solution has an elegant logic which cuts right through all the UN jargon and complexity which has blighted international climate policy so far. It's called Contraction and Convergence."

High Tide: The Truth About Our Climate Crisis Mark Lynas

http://www.amazon.com/High-Tide-Truth-Climate-Crisis/dp/0312303653/ref=sr_1_1?ie=UTF8&s=books&qid=1286132743&sr=8-1#_

There are many ways of looking at our ecological or carbon footprint. If you are looking at carbon footprints you could start by thinking about CO2 Contraction and Convergence – C&C calculates that given we have a global population of seven billion. If you divide that up each person can emit up to two tonnes of CO2 a year. At that rate our planet could sustain it. But the problem is that our population is rising and so then that figure would have to be reduced still further. Right now the average person in the UK is responsible for 12 tonnes. They have less than 1% of the world's population but produce 2.3% of the world's carbon emissions. In order to try and reduce these numbers, we need to think about how much CO2 our activities produce. We can do that by changing the amount of energy we waste on a daily basis through the energy we consume in our homes, transportation, leisure, overconsumption and waste. All of these make up our ecological footprints and their impact on the world.

Peace Child International

http://www.gci.org.uk/Documents/Road-to-Rio-20_.pdf

These possibly-safe trajectories require global emissions to fall by 70% or 85% by 2050. What would this mean for a country like Britain? If we subscribe to the idea of "contraction and convergence," which means that all countries aim eventually to have equal per-capita emissions, then Britain needs to aim for cuts greater than 85%: it should get down from its current 11 tons of CO2e per year per person to roughly 1 ton per year per person by 2050. This is such a deep cut, I suggest the best way to think about it is no more fossil fuels.

Sustainable Energy - David Mackay

<http://www.withouthotair.com/download.html>

Equity and fairness concerns are reflected in the Framework Convention itself. Equity is considered explicitly in many of the proposals for a post-Kyoto climate agreement, perhaps most prominently the Contraction and Convergence proposal, put forward by the Global Commons Institute, see: - <http://www.gci.org.uk/contconv/cc.html>

Fairness in International Climate Change Law and Policy - Soltau

[http://www.gci.org.uk/Documents/Energy-Game\[1\].pdf](http://www.gci.org.uk/Documents/Energy-Game[1].pdf)

Naturally, an agreement will have to be found on the issue of reparations for these cuts. "Contraction and convergence" represents one proposed plan that shows an equal level of emissions per capita for all by the end of the century. The attainment of this objective (re-launched recently by German Chancellor Merkel with the idea of 2 tons annually per inhabitant) involves an expressed decrease of emissions by industrialized countries and smaller amounts by those developing nations reaching a peak by 2025-2030, in order to diminish these emissions.

The ENERGY GAME

[http://www.gci.org.uk/Documents/Energy-Game\[1\].pdf](http://www.gci.org.uk/Documents/Energy-Game[1].pdf)

"The Global Commons Institute [GCI] coined the term and have campaigned to promote the 'contraction and convergence' approach, backed with detailed and graphic numerical studies of what it might mean. Details may be found on the GGI web site, <http://www.gci.org.uk>, which includes access to a numerical model. The international parliamentarians group, Global Legislators for a Balanced Environment, has backed this approach; and see Aubrey Meyer, 'Global Equity and Climate Change: A History of the UNFCCC Negotiations for a Global Solution', GLOBE International, Brussels, 1998; or Aubrey Meyer, 'Contraction and Convergence: A Global Solution to a Global Problem', in Man Made Climate Change - Economic Aspects and Policy Options, Proceedings of ZEW conference, Mannheim, Germany, March 1997."

The workshop sought to galvanize urgent international support and action for the concept of Contraction and Convergence policy framework proposed to the United Nations Convention on Climate Change by the Global Commons Institute (GCI) since 1990. The African Group of Nations had proposed during the UNFCCC – COP 3 that a "globally agreed ceiling of GHG emissions can only be achieved by adopting the principle of per capita emissions rights that fully take into account the reality of population growth and the principle of differentiation". The way forward for East African legislators was envisaged as calling for the UNFCCC secretariat to study, evaluate and assess the concept of Contraction and Convergence, and at the same time set the stage for building a global community to support the concept as it added value to the Kyoto Protocol and also encompassed the major principles in the Climate Change Convention such as the Precautionary principle, Polluter Pay principle and the Equity principle.

PROCEEDINGS OF THE WORKSHOP ON DIALOGUE WITH EAST AFRICAN LEGISLATORS ON CLIMATE CHANGE AND SUSTAINABLE DEVELOPMENT ISSUES 23-24 APRIL 2004 NAIROBI SAFARI PARK HOTEL — KENYA

As the currently over-consuming nations of the world proceed to "power down" their energy use, and to reduce material throughputs, while lowering personal consumption levels, overall global impacts can eventually be optimized well below the maximum sustainable capacities of the planet. However, we must remain cognizant of enormous disparities among nations as to present levels of use. Many nations and peoples of the world already live at very low consumption levels; in fact far below levels that can sustain personal, family and/or community well-being. Such disparities among and within nations are often the result of prior or present colonial periods of exploitation. It is unarguable that many countries of the industrial north have achieved their excessive natural resource use by depriving southern countries of theirs, a process that

continues in many places today. Recognizing this, we believe that each person and community, whether in the industrial North, or the global South, has fundamental rights to "sufficient" food, shelter, clothing, housing as well as sufficient community health and other public services, to sustain a satisfactory level of well-being beyond bare minimum survival needs. (Note: Working definitions of "sufficiency" and a "global sufficiency index" have been proposed and need further development and definition. As part of this project, we hope to soon advance a viable new clear standard.) Meanwhile, the argument is compellingly made by some Southern countries, historically disadvantaged, that they should not be asked to "power down" to the same degree as Northern countries. In the interests of survival, they may often need to increase their material throughputs, and energy use, from renewable sources; not to approach a level of excess consumption, but toward a level of "sufficiency," well within the planet's capacity to sustain.

Thus, the concepts of "cap and share," or, "contraction and convergence" have emerged. As wealthy over-consuming countries reduce their activity far below present overconsumptive levels, the goal is for the poorest countries and peoples to bring their levels up until "convergence" or equity is approached. Overall, however, the convergence target must remain far below the maximum sustainable levels for all planetary material throughputs, including total energy use, thus requiring profound net reductions in all areas. To assist this process will require considerable reallocation of planetary resources, wealth and sustainable technologies from the rich countries to the poorest countries and peoples, being certain to avoid the pitfalls and corruptions of prior historic patterns of aid, also usually rooted in colonial contexts. For example, within poor countries there are sometimes very wealthy elite minorities who gained from colonialism and globalization; they are sometimes called "the north within the south." Transfers and contributions from this wealthy class should be included in the domestic equation. (Note: There are a growing number of proposals for how such transfers from North to South might operate, several of which are mentioned in the Resources section. We do not favor any of these proposals above others at this time; all should be studied and debated as to their optimum viability.) Equally important: The interests of equity also require rapid withdrawal of giant export-oriented agricultural corporations from food growing lands in poor countries. These lands have mainly been acquired over years by a variety of unacceptable means—sometimes militarily, or with the help of corrupt regimes—and most recently via the appalling rules of global bureaucracies, including the WTO and World Bank. Lands thus alienated from local people must be returned to the control of local communities and farmers. This in itself would free millions of people to re-assume their traditional local food growing activities that sustained their communities. Ultimately, the goal must be to achieve international accords on formulas that achieve "contraction" and "convergence," i.e., formally mandated global economic formulas that lead to overall economic "contraction"—to live within realistic planetary limits—and "convergence" at an agreed global standard of "sufficiency" for all, as planetary health and resources permit. We believe that such a transition can lead to successful responses to this crisis, increased equity within and among countries, and a renewed sense of personal and global good feeling, well-being and peace.

MANIFESTO ON GLOBAL ECONOMIC TRANSITIONS POWERING-DOWN for the FUTURE

Toward a Global Movement for Systemic Change: Economies of Ecological Sustainability, Equity, Sufficiency and Peace, "Less and local" - EDITOR JERRY MANDER

**A Project of THE INTERNATIONAL FORUM ON GLOBALIZATION,
THE INSTITUTE FOR POLICY STUDIES, GLOBAL PROJECT ON ECONOMIC TRANSITIONS. 09 2007**

<http://www.swaraj.org/shikshantar/manifesto.pdf>

Contraction and Convergence is a proposed global framework for reducing Greenhouse gas emissions to combat Climate change. Conceived by the Global Commons Institute in the early 1990s, the Contraction and Convergence strategy consists of reducing overall emissions of greenhouse gases to a safe level where the global emissions are reduced because every country brings emissions Per capita to a level which is equal for all countries. It is intended to form the basis of an international agreement which will reduce Carbon dioxide emissions to avoid Climate change, carbon dioxide being the gas that is primarily responsible for changes in the Greenhouse effect on Earth. It is expressed as a simple mathematical formula. This formula can be used as a way for the world to stabilize carbon levels at any level. Advocates of Contraction and Convergence stress that negotiations at the United Nations Framework Convention on Climate change are governed sequentially by the 'objective' of the UNFCCC followed by its organising principles. C&C is widely cited and supported www.gci.org.uk endorsements. [html](http://www.gci.org.uk/html) The "contraction" part of Contraction and Convergence model calculates the total amount of carbon being put into the atmosphere as a 'path-integral' or a total 'contraction-event'. Future global emissions will shrink over time and the shape and extent of this will depend on the final level of atmospheric carbon considered safe, subject to the changing source-sink relationship in future as future atmospheric GHG accumulation continues.

Having reviewed the trends in the use of natural resources and accompanying undesirable environmental impacts in the first section of Chapter 2, the last section of that chapter considers possible future implications by presenting three brief scenarios: (1) business as usual (leading to a tripling of global annual resource extraction by 2050); (2) moderate contraction and convergence (requiring industrialized countries to reduce their per capita resource consumption by half the rate for the year 2000); and (3) tough contraction and convergence (aimed at keeping global resource extraction at its current levels). None of these scenarios will lead to actual global reductions in resource use, but all indicate that substantial reductions in the resource requirements of economic activities will be necessary if the growing world population can expect to live under conditions of sustainable resource management. The key message of the tough scenario is that despite population growth to roughly 9 billion people, the pressure on the environment would remain roughly the same as it is now. The emissions correspond approximately to the lowest range of scenario B1 of the IPCC SRES, but are still 20% above the roughly 5.5 GtC/yr advocated by the Global Commons Institute for contraction and convergence in emissions (GCI, 2003).

One of the most prominent for emissions allocations are the Global Commons Institute's "contraction and convergence" approach (Meyer 2001)

Breaking the Climate Change Impasse with China Kelly Sims Gallagher Assoc Prof Energy & Environmental Policy Harvard Project on International Climate Agreements

http://www.gci.org.uk/Documents/Gallagher_Final_5.pdf

Such aims must be reached through an equitable global climate regime that continues the efforts of the Kyoto Protocol under the umbrella of the United Nations Framework Convention on Climate Change (UNFCCC). At the heart of this regime could be a cap-and-trade philosophy, which stems from the concept of climate justice and has been termed contraction and convergence. The idea is to put a cap on total global emissions and continually reduce the global cap over the years (until 2050, for example) until the cap level is reduced to a targeted sustainable threshold. This means that global greenhouse gas emissions – from industrial production and consumption to land, sea and air traffic – would decrease substantially over the long term (contraction). Emission allocation would start from the status quo and gradually reach an equal per-capita basis (convergence). In practical terms, this means that the per-capita emissions of industrialized countries, which are comparatively much higher at present, will be decreased significantly, while most developing countries may initially increase their per-capita emissions.

SHARE THE SAME DREAM & IT WON'T BE A DREAM FOR LONG. Frithjof Finkbeiner, International Coordinator, Global Marshall Plan Initiative, Chairman, Global Marshall Plan, Foundation, Member Club of Rome. James B. Quilligan, Coordinator, Global Marshall Plan, Initiative-USA, Director, Centre for Global Negotiations/Brand 21 Forum

http://www.gci.org.uk/Documents/GMPBrochure_.pdf

Until recently, most players in the climate-policy arena assumed that while global-warming emissions needed to be cut substantially, they did not need to be reduced to zero, so it would be fair for all people across the globe to share a reduced annual greenhouse-gas limit. Poor people could keep increasing their fossil-fuel use until their emissions reached the limit, and people in rich countries would need to keep reducing their emissions until they reached the same per capita level (a principle known as 'contraction and convergence').

Climate Code Red David Spratt and Philip Sutton

http://www.amazon.co.uk/Climate-Code-Red-Emergency-Action/dp/1921372206/ref=sr_1_1?ie=UTF8&s=books&qid=1305043597&sr=8-1

Contraction and Convergence. One of the most interesting concepts for a contract for people's CO₂ justice is currently being discussed under the title Contraction and Convergence [C & C]. This is a contract that allows an upper limit global CO₂ emissions [contraction] with a process of gradually approximation to a distribution of emission allowances to egalitarian criteria [convergence].

Prinzip Nachhaltigkeit Markus Vogt

http://www.amazon.co.uk/Prinzip-Nachhaltigkeit-Entwurf-theologisch-ethischer-Perspektive/dp/3865810918/ref=sr_1_5?ie=UTF8&qid=1305643070&sr=8-5#_

Contraction and Convergence - the fairest solution, a simple mathematical truth.

The Final Call: Investigating Who Really Pays For Our Holidays Leo Hickman

Contraction and Convergence [C&C] is a political framework that only work if all parties accept the need to compromise in order to achieve the Convention's ultimate. If this is achieved then C&C is the structure that can form the basis of negotiations regarding global budgets and target dates.

Air Pollution Science for the 21st Century (Developments in Environmental Science) J. Austin, Peter Brimblecombe, W.T. Sturges

http://www.amazon.co.uk/Pollution-Science-Century-Developments-Environmental/dp/008044119X/ref=sr_1_138?s=books&ie=UTF8&qid=1305563772&sr=1-138

A robust emissions-trading scheme should be introduced as part of a new international treaty to cut greenhouse gas emissions, based on the contraction and convergence (C&C) model. Under the C&C model each country would be allocated the same per capita allowance for greenhouse gas emissions.

Green Alternatives to Globalisation: A Manifesto **Michael Woodin, Caroline Lucas**

http://www.amazon.co.uk/gp/reader/0745319327/ref=sib_books_pg?p=S032&keywords=contraction+and+convergence&ie=UTF8&qid=1305551395#reader_0745319327

Under the Copenhagen Accord, it appears that 2°C above preindustrial levels has already been agreed upon. The allowable future cumulative emissions required to keep global warming below this temperature threshold can then be calculated. Determining how such future CO₂ emissions are partitioned, perhaps under a contraction and convergence framework, could then be the subject of international negotiations.

Toward the Second Commitment Period of the Kyoto Protocol Policy Forum, Andrew Weaver, AAAS Science Magazine May 2011

<http://www.sciencemag.org/content/332/6031/795.citation>

This manifesto supports the Bolivian government's proposals for a binding global treaty recognising Mother Earth Rights. This will protect the rights of indigenous people, who live in wildernesses or other tribal lands, for all time and make the patenting of any plant species illegal. The only equitable way of halting climate change is through contraction and convergence. We need a democratic global forum to plan to halt the growth in emissions and to mitigate the impacts that are now inevitable. They would draw on all the expertise represented by climate scientists, world food and health experts and support each others' development towards self-government and economic independence.

Manifesto of Revolutionary Solutions 2011 A World To Win

<http://www.gci.org.uk/Documents/ManifestoEbook.pdf>

In 1990, a group of activists led by Aubrey Meyer founded the Global Commons Institute [GCI]. Its objective is to find a solution to global warming that is fair to all inhabitants of the Earth. A GCI publication, "Contraction and Convergence: A Global Solution to a Global Problem", states: "Because everyone - regardless of status - is now increasingly vulnerable to the impacts of climate change, the rich have little choice but to share the burden of contraction fairly." The GCI presented its original agenda to the Second World Climate Conference in 1990. Later, at the urging of the IPCC, it developed a plan that is now known as "Contraction & Convergence" (C&C). The goal of C&C is to reverse the current state of affairs in which industrialized countries account for a growing share of emissions. Developing countries suffer most of the effects of global warming and the two sides cannot agree on how to solve the problem. The Institute observed, "We consider that a failure to face and secure a global commitment of this kind will result in a perpetual stalemate in the international political process to the extent that the agreement and delivery of global abatement targets will become less and less possible."

Environmental Regulations and Global Warming Point/Counterpoint: Issues in Contemporary American Society Paul Ruschmann Alan Marzilli

http://www.amazon.co.uk/Environmental-Regulations-Warming-counterpoint-Counterpoint/dp/1604133325/ref=sr_1_1?ie=UTF8&s=books&qid=1306231222&sr=8-1

As early as 2000 the Royal Commission on Environmental Pollution [RCEP] recommended the "contraction and convergence" in its report to Government and the Government's White Paper of 2003. The Insurance industry is the earliest among the business community to recognise the seriousness of global warming and the most concerned to find a quick solution as it impact its bottom line directly. Looking for a real world solution that will truly work the Chartered Insurance Institute of the UK had no hesitation in accepting contraction and convergence.

Problems and Prospects of Environment Policy M S Dhatt, Sahid Ashraf, Asheref Illiyan

http://books.google.com/books?id=MFeoq9hTAZkC&pg=PA169&dq=contraction+and+convergence&hl=en&ei=iq3cTYLpH4iq8AOmyrzuDw&sa=X&oi=book_result&ct=result&resnum=1&ved=0CCgQ6AEwADJSAQ#v=onepage&q=contraction%20and%20convergence&f=false

The challenge to treat countries according to the Global Ethic might receive a boost. The so-called "contraction and convergence" [C&C] initiative of the Global Commons Institute in the UK might for example be attractive from this perspective.

Inspiring Progress: - Religions' Contributions to Sustainable Development - Gary T. Gardner

http://www.amazon.com/Inspiring-Progress-Contributions-Sustainable-Development/dp/0393328325/ref=sr_1_fkmr0_2?ie=UTF8&qid=1306230489&sr=8-2-fkmr0

One of the most highly developed models is contraction and convergence which leads from egalitarian ideals by way of science. The best estimate of the amount of greenhouse gas in a stable atmosphere well short of catastrophic climate change would be the target and nations would move towards it [contraction based on an eventual equal distribution of emissions per person [convergence]]. Proponents see the equality as the only way of apportioning 'use' of the atmosphere, which has no boundaries and supports everyone. The Global Commons Institute has been bringing this idea to the international climate meetings since 1990.

Earth Under Fire - Gary Braasch

http://books.google.com/books?id=PJJqIghGX0C&pg=PA177&dq=contraction+and+convergence&hl=en&ei=E-TbTdjWL8Or8APWyZEB&sa=X&oi=book_result&ct=result&resnum=2&ved=0CC8Q6AEwATIMAQ#v=onepage&q=contraction%20and%20convergence&f=false

Contraction and Convergence a framework for long-term climate policy, is an idea promoted by the Global Commons Institute. The aim is to avoid climate destabilization in an equitable way. The first part starts with the assumption that there is a certain safe level of GHGs in the atmosphere. If this level is exceeded, the world would risk catastrophic effects of climate change. It is difficult to say exactly what the safe level is, but it is commonly agreed that CO2 concentrations should stay within a range of 450-550 part million by volume [ppmv]. On the basis of this the worldwide CO2 emissions can be calculated. To be realistic, contraction should take into account the current CO2 emissions and the growth path of emissions in the short term. In the longer term, there has to be a large contraction of emissions in order to stay within the safe level of for example 450 ppmv in the atmosphere. Based on the agreed upper limit of CO2 concentration combined with a feasible rate of emissions reduction over time a global emissions budget can be set. The second part convergence is about an equitable distribution of the worldwide emissions budget. The ideal would be an equal per capita distribution of the emissions entitlements. This could be done per year and distributed per country. The emissions entitlement should then be tradable between countries. Given population growth and the fact that emissions have to be reduced over time, the per capita entitlements will become less each year. A sudden introduction of an equal per capita distribution of emissions entitlements would not be politically acceptable. The current per capita emissions in developed countries are many times higher than those in developing countries.

Climate Change in Developing Countries M van Drunen, R Lasage, C Dorland

http://www.amazon.com/Climate-Change-Developing-Countries-Michiel/dp/1845930770/ref=sr_1_1?s=books&ie=UTF8&qid=1306237539&sr=1-1

The equitable vision of "contraction and convergence," where all countries have the same carbon emission rights per person and everyone continues to get richer, especially in developing countries, could head for carbon reductions around 90% over the next century. Could that grand vision of a richer, fairer, cooler, and safer world actually be feasible and profitable?

ASAHI GLASS Blue Planet Lecture Lovins 2007

http://www.gci.org.uk/Documents/Asahi_2007_Lecture_Lovins.pdf

Environmental Space is an essential prerequisite to make the so-called "Contraction and Convergence" approach, now attracting the attention

of Climate Convention delegations, viable.

Survival for a Small Planet Tom Bigg

http://books.google.com/books?id=I9xDC5-Q9QMC&pg=PA171&dq=contraction+and+convergence&hl=en&ei=HOfbTbiXO4mO8gOpk40P&sa=X&oi=book_result&ct=result&resnum=10&ved=0CfcQ6AEwCTiqAQ#v=onepage&q=contraction%20and%20convergence&f=false

Equal per capita emissions allocations underlie the "contraction and convergence" [C&C] framework put forward by organization, such as the Global Commons Institute. Under this approach, annual emissions per capita in different countries would be allowed to converge toward similar levels over time and possibly roughly equate to the rate at which the natural systems can absorb the excess greenhouse gasses in the atmosphere (thus stabilizing concentrations). This would require contractions in emissions by some countries and allow increases in emission, in others. Some also suggest that this should form a basic principle underlying the allocation of emissions caps in a global emissions trading system, should one eventually be established. Elements of the principle of C&C have merit and should on equity grounds hold some sway in the international negotiation process. However, a single equal allocation of emissions rights across the globe is somewhat simplistic and may not necessarily lead to an efficient outcome. Different countries have different resource endowments, different population growth rates and different opportunities for cost-effective emissions reductions. Countries are also likely to face different transitional constraints and adjustment burdens. These differences would at least to some extent need to be reflected in any negotiated agreement to ensure that they did not present perverse incentives or excessive burdens to particular countries. The allocation of emissions rights would also need to take into account international flows of embodied emissions. Understandably, there is resistance to the C&C principle among countries that have high per capita emission levels.

The Complete Guide To Climate Change B Dawson & M Spannagle

http://books.google.com/books?id=nnT9EuGy85EC&pg=PA135&dq=contraction+and+convergence&hl=en&ei=zcPbTaTHcOo8QP4yeziDw&sa=X&oi=book_result&ct=result&resnum=1&ved=0CCgQ6AEwADg8#v=onepage&q=contraction%20and%20convergence&f=false

Some proposals compensate the potential burden on developing nations with generous emissions allocation, whether as a simple strategy to obtain developing countries support for the regime or in a realisation of the global equity principle borrowed from social justice. A famous such proposal is "Contraction and Convergence" developed by Aubrey Meyer.

Act Locally Trade Globally - Emissions Trading for Climate Policy Organisation for Economic Cooperation and Development IEA

http://books.google.com/books?id=Mpba74EPLZAC&pg=PA174&dq=contraction+and+convergence&hl=en&ei=KQfcTd3rDIyq8APUhoUD&sa=X&oi=book_result&ct=result&resnum=3&ved=0CDIQ6AEwAji-AQ#v=onepage&q=contraction%20and%20convergence&f=false

One of the most prominent for emissions allocations are the Global Commons Institute's "contraction and convergence" approach (Meyer 2001)

Breaking the Climate Change Impasse with China Harvard University BELFER Centre

http://www.gci.org.uk/Documents/Gallagher_Final_5.pdf

Support from unexpected quarters came as a welcome surprise for developing countries such as India, which have demanded that international climate change negotiations be based on the principle of equity. A report released by the UK's Royal Commission on Environmental Pollution (RCEP) in June 2000 said that an effective, enduring and equitable climate agreement will require greenhouse gas (GHG) emission quotas to be allocated to nations on a simple and equal per capita basis. The UK government is expected to respond in writing in the form of a commentary on the report, an explanation of how existing policies and programmes can be reconciled with it and what new policies - if any - the government is considering in light of the report. So far, the UK has held a position of indifference towards the South's demand to calculate

GHG emissions on a per capita basis as each human being has an equal entitlement to the atmosphere. As a system of per capita entitlements cannot enter into force immediately, the report proposes 'contraction and convergence'. "Initially shares are 'as is', that is, approximately proportionate to each country's income", explains Aubrey Meyer from the London-based Global Commons Institute, a leading advocate of this approach. "Over an agreed future period of years however, all countries will converge on the same allocation per head of their population in a base year to be agreed. This means the quotas of industrialized countries fall year by year, while those of developing countries rise until all nations emit equal amounts of GHG per head (convergence). The RCEP report proposes 2050 as the year for convergence. It will also be cut-off date for national populations, that is, further changes in a country's population will not affect its emissions quotas. From then on, after convergence has been achieved, the quotas of all nations would decline together at the same rate (contraction). According to the report, commentators on climate diplomacy have identified contraction and convergence as the leading contender among the various proposals for allocating emissions quotas to nations in the long run. To make an agreement based on per capita allocation quotas more feasible. The report supports emission trading between nations. Countries that wish to emit GHG in excess of their respective quotas would be able to purchase unused quotas at prices that incline other countries to emit less than their quotas.

Relevance of Environment Narottam Gaan

http://www.amazon.com/Relevance-Environment-Narottam-Gaan/dp/817835411X/ref=sr_1_fkmr1_1?ie=UTF8&qid=1306234716&sr=8-1-fkmr1

They invite governments to initiate a process of 'contraction and convergence', by allocating carbon allowances, whereby those who emit too much carbon buy allowances from those who do not.

Keeping the Lights On Walt Patterson

http://books.google.com/books?id=fNXmtP3QukYC&pg=PA23&dq=contraction+and+convergence&hl=en&ei=hb3cTdyfG8Zz8QO3hoj4Dw&sa=X&oi=book_result&ct=result&resnum=1&ved=0CCgQ6AEwADisAg#v=onepage&q=contraction%20and%20convergence&f=true

Ideally global emissions have to contract to an end-point [concentration level of say 550 ppmv] and converge by a given date [say 2050]. This approach is formally known as "Contraction and Convergence" and was created by Aubrey Meyer of the Global Commons Institute.

Natural Disasters and Development in a globalizing world Mark Pelling

http://books.google.com/books?id=yzluB_S3xYkC&pg=PA126&dq=contraction+and+convergence&hl=en&ei=ULLcTfvqAoIw8QPUn6TqDw&sa=X&oi=book_result&ct=result&resnum=9&ved=0CEgQ6AEwCDjmAQ#v=onepage&q=contraction%20and%20convergence&f=false

A new climate treaty would at least pay lip service to the obligations of developing nations, although it could probably not require them to reduce emissions. Instead, a new Kyoto might be shaped by the notion of "Contraction and Convergence" [Meyer 2000] now popular in European environmental circles.

Unstoppable Global Warming Fred Singer Dennis Avery

http://books.google.com/books?id=mFl6YYsRNpgC&pg=PA231&dq=contraction+and+convergence&hl=en&ei=KQfcTd3rDlyq8APUhoUD&sa=X&oi=book_result&ct=result&resnum=2&ved=0CCwQ6AEwATI-AQ#v=onepage&q=contraction%20and%20convergence&f=false

Eventually, the developing countries will need to graduate and join the industrial world with binding caps. This process could build a contraction and convergence path.

Global Warming - Looking Beyond Kyoto **Ernesto Zedillo, Ponce de León**

http://books.google.com/books?id=NPUBsNEphrQC&pg=PA110&dq=contraction+and+convergence&hl=en&ei=HOfbTbIXO4mO8gOpk40P&sa=X&oi=book_result&ct=result&resnum=7&ved=0CEgQ6AEwBjiqAQ#v=onepage&q=contraction%20and%20convergence&f=false

WHOSE ATMOSPHERE?

The IPCC low concentration scenario results in a CO₂ concentration of 450 ppmv CO₂ and a total greenhouse gas concentration equivalent to about double pre-industrial levels. This would produce a long-term temperature increase of about 2.5°C at the present best estimate of climate sensitivity. However, it is difficult to maintain that such a target would be tolerable with respect to the human rights of considerable sections of the world population. A lower target is required, taking into account not only the aggregate cost of climate change mitigation, but also protection of the inalienable livelihood rights of large numbers of world citizens. The Climate Action Network has therefore called for a target which keeps the global mean temperature increase below 2°C above pre-industrial levels, with the temperature being reduced as rapidly as possible after the time that it peaks. Such a target is unlikely to be 'safe', but the probability of a large scale dangerous change would be lowered for most regions. So far, both Northern and Southern governments - apart from the Island States - have shown little interest in defining low danger emission caps in the climate negotiations. All parties disregard the fact that when it comes to capping emissions, the choice is between human rights and the need for affluence. The task of keeping the temperature rise below 2°C appears too large, and too threatening to the economic interests of consumers and corporations. In particular, it still seems to have escaped the attention of Southern countries that climate protection is of the utmost importance for the dignity and survival of their own people. It is time they become protagonists of climate protection, because climate protection is not simply about crops and coral reefs, but fundamentally about human rights. The point of convergence of North and South on equal emission levels cannot be achieved at the expense of contraction, i.e. the transition to globally sustainable levels of emissions. Once again, sustainability gives rise to equity.

Indeed, the vision of "Contraction and Convergence" combines ecology and equity most elegantly; it starts with the insight that the global environmental space is finite, and attempts to fairly share its permissible use among all world citizens, taking into account the future generations as well.

Ethical Aspects of the Convention on Climate Change **Wolfgang Sachs**

http://books.google.com/books?id=J2eh2B1nce4C&pg=PA98&dq=contraction+and+convergence&hl=en&ei=DqrbTZDvHsep8QOVk7zwDw&sa=X&oi=book_result&ct=result&resnum=8&ved=0CEoQ6AEwBzge#v=onepage&q=contraction%20and%20convergence&f=false

For many years, most environmentalists who have been involved in the international debate have agreed that in the long term the international sharing of the emissions reduction burden should be based on per capita allocations. There is thus widespread support for the contraction and convergence model as the only principle that can include developing countries in a fair way. It is thus gratifying to see this principle adopted by Professor Ross Garnaut.

The Best Australian Political Writing **Eric Beecher**

http://books.google.com/books?id=gwbUiNK-ulQC&pg=PA207&dq=contraction+and+convergence&hl=en&ei=KQfcTd3rDIyq8APUhoUD&sa=X&oi=book_result&ct=result&resnum=8&ved=0CE8Q6AEwBzi-AQ#v=onepage&q=contraction%20and%20convergence&f=false

Contraction and Convergence

Capping greenhouse gas emissions globally is indispensable for maintaining the integrity of life on the planet. Sixty percent in six decades is roughly the order of magnitude contraction requires. However, the Kyoto Protocol so far fails to live up to this challenge. It does not demand serious reductions from the North, and does not include newly industrializing countries from the South. Nevertheless, for the second commitment period of the Kyoto process, an ecological breakthrough cannot be reasonably expected unless the South assumes commitments as well. Otherwise, the North will stall, and, more importantly, the steep rise in emission levels in the South will continue unchecked. At this point, the issue of equity will reveal itself as the major bottleneck for any serious progress in climate protection. On the one side, the South will refuse obligations before the North follows through on its responsibility, while on the other side the North will not be forthcoming before commitments for the South are defined. Unless the reduction commitments of the North and those of the South are balanced out in fairness, no real climate protection will happen. Only a framework that respects the principle of equal per capita right to the resources of this Earth will eventually hold up to equity and fairness. Any other allocation scheme ("grandfathering", "cost-base") would repeat a colonial constellation of granting disproportionate shares to the North. If the use of the commons has to be restrained through common rules, it would violate the principle of equity to design these rules to the advantage of some and the disadvantage of many. The equal right of all world citizens to the atmospheric commons is therefore the cornerstone of any viable climate regime. Therefore, for the second commitment period of the Kyoto Protocol, a process allocating emission allowances based on per capita equal rights to each country, has to be initiated. This is hard on the North, but not unfair as in exchange for accepting the rule of egalitarianism in the present, industrial countries would not be held liable for emissions accumulated in the past. It is from this right to atmospheric commons that all countries (and all classes) in the long run converge in their trajectories upon a similar level of fossil energy use per capita. The North contracts downwards, and the South converges upwards. Over-users will have to climb down from the present level, while under-users are permitted to raise their present level, albeit at a gradient that is much less than the one industrial countries went through historically, levelling off at the point of convergence. However, the convergence of North and South on equal emission levels cannot be achieved at the expense of contraction, i.e. the transition to globally sustainable levels of emissions. Once again, sustainability gives shape to equity. The vision of "contraction and convergence" combines ecology and equity most elegantly; it starts with the insight that the global environmental space is finite and attempts to fairly share its permissible use among all world citizens taking into account the future generations as well.

The Jo'burg Memo Heinrich Boell Foundation

http://www.gci.org.uk/Documents/Joburg_Memo_.pdf

Contraction and convergence

What would it imply to bring the world to a greater level of resource justice? The vision of 'contraction and convergence' (Meyer, 2000) anticipates two different development paths: one for industrial countries: one for developing countries, All nations of the world would adjust their use of resources so that in half a century from now they no longer overstretch the absorption and regeneration capacity of the biosphere, Since no nation has the right to a disproportionate share of the global environment, each one endeavours - though with individual variations - to achieve the common goal of material and energy consumption compatible with the demands of other countries, while remaining within the carrying capacity of the biosphere.

In the end, there is no justification for any other distribution of globally important resources: the right of all nations to a self-defined and equal development permits it only to make claims that are socially and ecologically sustainable at a global level. Given that the industrial countries excessively occupy the global environmental space, it follows that they are called upon to contract - that is, that they reduce their consumption of resources drastically. Resource justice in the world crucially depends on whether the industrial countries are capable of retreating from overconsumption of the global environment. The example of greenhouse gases may serve to illustrate the path of shrinking resource consumption. By the middle of the century, the over-consumers must reduce by 80 to 90 percent the strain they put on the atmosphere by burning fossil fuels, in order to do justice to the precepts of both ecology and fairness. Clearly, the need to reduce fossil fuel consumption and carbon emissions applies to the 'global North', which includes the wealthy consumer classes of the South. On the other hand, the contraction and convergence perspective sees developing countries as tracing an upward curve in resource consumption. First, poorer countries have an unquestionable right to attain at least a 'dignity line' of resource consumption that should apply to all citizens of the world. Without access to kerosene or biogas, without an energy and transport infrastructure, it is hard to satisfy even the basic needs of human life. Moreover, each country will try to achieve different images and forms of a prosperous society - an ambition that in turn requires access to resources such as energy, materials and land. However, this upward movement ends at an upper line of ecological sustainability for all; natural limits set the framework for justice. As it happens, a number of emerging economies are already about to hit that limit in the coming decade. The conceptual model of 'Contraction and Convergence' thus combines ecology and justice. It begins with the insight that environmental space is finite, and it ends with a fair sharing of the environment by the citizens of the world. It was as early as October 1926 that Mohandas Gandhi sensed the impasse of development. In one of his columns for Young 'lit/iII, the mouthpiece of the Indian independence movement, he wrote 'God forbid that India should ever take to industrialization after the manner of the West. The economic imperialism of a single tiny island kingdom (Britain) is today keeping the world in chains. If an entire nation of 300 million took to similar economic exploitation, it would strip the world bare like locusts.' More than 80 years later the wider implications of this statement have lost none of its relevance. Indeed, its importance has increased, since today there are no longer 300 million but 1000 million setting out to imitate the model of development that began in Britain with the Industrial Revolution. Gandhi suspected that it would not be possible to restore India's dignity, and still let China's or Indonesia's, at the economic level of Britain. The biophysical limits to the spread of the Euro-Atlantic civilization have impressively confirmed Gandhi's intuition.

The International Handbook of Environmental Sociology **Michale Redclift and Graham Woodgate**

http://books.google.com/books?id=fyhhWgou1p4C&pg=PA273&dq=contraction+and+convergence&hl=en&ei=DqrBTZDvHsep8QOVk7zwDw&sa=X&oi=book_result&ct=result&resnum=4&ved=0CDgQ6AEwAzge#v=onepage&q=contraction%20and%20convergence&f=false

One widely accepted proposal is to stabilize emissions at 450 ppmv through a process of 'contraction and convergence', permitting the developing world to grow economies and emissions while the developed world reduces emissions so that the two converge at roughly equal per capita allocations by 2050, perhaps as a result of trading in carbon permits.

Key Topics in Conservation Biology **David McDonald Katrina Service**

http://books.google.com/books?id=YwgJZU-tXgwC&pg=PA98&dq=contraction+and+convergence&hl=en&ei=D9XbTf7MI9Go8APxoZz4Dw&sa=X&oi=book_result&ct=result&resnum=10&ved=0CE8Q6AEwCThk#v=onepage&q=contraction%20and%20convergence&f=false

"Contraction and Convergence" - the concept increasingly being taken up by international agencies refers to the need to reduce consumption among wealthy states to enable poorer states to raise their standard of living. A similar commitment is needed at the smallest scale so that gender equality can be harnessed to reduce negative environmental impact on the whole population, not just those who have the power and wealth [as currently obtains] or the visibility [the risk of the current environmental movement] to affect policy.

The Sustainable Development Paradox **Rob Krueger David Gibbs**

http://books.google.com/books?id=XqjE8zuNjtEC&pg=PA89&dq=contraction+and+convergence&hl=en&ei=q-_bTZIiaHxA52YwPQP&sa=X&oi=book_result&ct=result&resnum=4&ved=0CDcQ6AEwAzi0AQ#v=onepage&q=contraction%20and%20convergence&f=false

Under what we have termed a "Beyond Kyoto" scenario, all nations would pursue the goals of "Contraction and Convergence" [Meyer 2000] consistent with the IPCC's findings on carbon-carrying capacity and principles of equity and sustainability. The purpose of the collective effort in this case is to begin the process of withdrawing society from activities presumed appropriate for designing nature. Instead humanity would embrace the goal of restoring a commons relation between society, the atmosphere and climate.

**Population Growth and Climate Change
Optimum Population Trust Statement**

OPT recommends: - "That the principle of "contraction and convergence" (rich and poor converging towards a common per person emissions target) be accepted as an equitable starting point for distributing total tolerable carbon emissions, provided that this is allocated to states on the basis of their population size at a specific date. This would encourage the adoption of population restraint policies; whereas allocation on a simple per person criterion would encourage continued population growth, thus continuously reducing every person's carbon entitlement."

Letter to Minister Chris Huhne with signatories also at: -

<http://www.gci.org.uk/politics.html>

"Contraction and Convergence is a prime example of a UNFCCC-compliant Global Climate Change Framework. It is a rational formulation for reconciliation of 'Climate Justice without Vengeance'. Several ideas derived from C&C have surfaced since Kyoto with ideas that can be perhaps in various ways incorporated into C&C. However, there is an overwhelming need for an over-arching UNFCCC-compliant Framework that enables the globally competing interests of the over-consuming and the under-consuming to be reconciled with each other and with the objective of the UNFCCC in a non-random manner. We feel that C&C is the veteran and indeed the apex example of this and urge you to consider our request. At Kyoto in December 1997 and shortly before they withdrew from these negotiations, the USA stated, "C&C contains elements for the next agreement that we may ultimately all seek to engage in." The adversarial reasons for their withdrawal then were in play again at COP-15: - http://www.gci.org.uk/public/COP_15_C&C.swf C&C answers this in a unifying and constitutional way and the need for this answer becomes increasingly critical."

Support for Saskawa Prize Nomination 2003

Support for Funding Appeal 2009

Support for GCI advocacy

Support Individuals for C&C advocacy

Support Organisations for C&C advocacy

Aubrey's effort to keep the C&C approach visible at the centre-ground of UN climate politics has substantially paid off. It resulted in the adoption and advocacy of C&C by the UK Royal Commission on Environmental Pollution [RCEP] in 2000. After that he published a body of evidence on C&C for the UK Parliamentary Select Committees who in turn have repeatedly published reports strongly advocating C&C to successive UK Governments. In the light of all these recommendations, this has resulted in the UK Climate Act [2008] being clearly based on C&C. Awarding this Prize to Aubrey Meyer for Contraction & Convergence, could be invaluable in achieving consensus on the global deal needed for success at the UNFCCC. It would not just be a recognition of his effort, it would send a strong signal to the UN saying that to survive, we must finally transcend the politics of blame and join together globally in this constitution for Climate Justice without Vengeance."

Nomination of Aubrey Meyer and 'Contraction & Convergence' for Zayed Prize
by Dr. Mayer Hillman, Senior Fellow Emeritus, Policy Studies Institute, London

http://www.gci.org.uk/Documents/Zayed_Prize_2011_Nomination_of_Meyer_by_Hillman.pdf
