UK Changes its CO2 emissions target to align with UN Secretary General

In 2016 Greg Clarke became Minister at BEIS. In the Judicial Review of the UKCA in 2017 he said, "we will not be changing the UK emissions target."

He changed the UK emissions target to align with UN to 68% below 1990 levels by 2030, could be implying 100% UK & global zero emissions by 2040.

On the basis of precaution & equity & following the lead from UK medics, all Countries logically share the remaining global carbon budget either pro-rata and mixed or immediate equal per capita

(-80% by 2050).

14 GtC

-50% by 2030 ~14 Gt C gross annual 2020 ~ 7 Gt C gross annual by 2030 ~ 0 Gt C gross annual by 2040

i.e. integral total ~140 Gt C

otherwise the point-of-no-return means a domino-effect of uncontrollably failing ecosystems after 2030.
