

Doing the Maths [2010 - 2100] for James Hansen's

1. Carbon Dioxide Concentration Curve
in Parts per Million by Volume [PPMV]

2. 'Carbon Budget'
in Gigatonnes Carbon [Gt C]

from: -

1. Declining Fossil Fuel Emissions 2010 - 2100,
204 Gt C Fossil Fuel Emissions Declining @ 6%/yr

and

2. Reforestation 'Draw Down' stated as
'100 Gt C 2030 2080'.

Its not quite clear whether
the Fossil Fuel Emissions Budget is

1. 'net' of the 100 Gt C Reforestation Emissions or
[i.e. net total 104 Gt C]

2. 'in addition' to the 100 Gt C Reforestation Emissions
[i.e. net total 304 Gt C]

As expressed in the Hansen document at this reference: -
