

Globalize this 'UK Climate Leadership', at equal per capita globally by 2050 & >2°C follows, which points straight into the 'looming climate catastrophe'

2014, the Blueprint Population Base Year for UK Shares of IPCC Budgets based on the Global Per Capita Emissions Averages arising from the global Green, Amber & Red budgets.

The UK Government's Climate-Crazy 'Hail Mary' 'We will not change target.'

**UK share from the UK Climate Act, Climate Change Committee & BEIS**

2.7 Gt Carbon + 0.6 Gt Carbon Equivalent Emissions i.e + Ce = 3.25 Gt C, 3 times IPCC AR5 50% odds for 1.5° C

2.7 Gt Carbon Only (less Equivalent Emissions i.e. three times IPCC AR5 50% odds for 1.5° C

Ministers must tighten the UK's official climate change target or face the courts, the government's former chief scientist has said.

Prof Sir David King is supporting a legal case forcing ministers to shrink carbon emissions to zero by 2050. He says the current government goal - an 80% emissions cut by the same date - is too weak to protect the climate. Ministers have promised more ambitious climate policies in their forthcoming and long-delayed Clean Growth plan.

But Prof King told BBC News the government knew the 80% target cut behind that plan was too weak. Some 18 months ago, Environment Secretary Andrea Leadsom promised a 100% emissions reduction to keep the UK on track with its obligations under the 2015 Paris climate deal. But ministers have failed to enshrine that 100% cut within the Climate Change Act.

"This is crazy," Prof King told the BBC.

"The government knows very well what needs to be done, but it isn't doing it. If it takes legal action to force ministers to behave properly, then so be it, I'll support it."
