

The price of carbon must rise & the volume must fall;  
 the price of renewable alternatives must fall,  
 & the volume of this must rise, but . . .

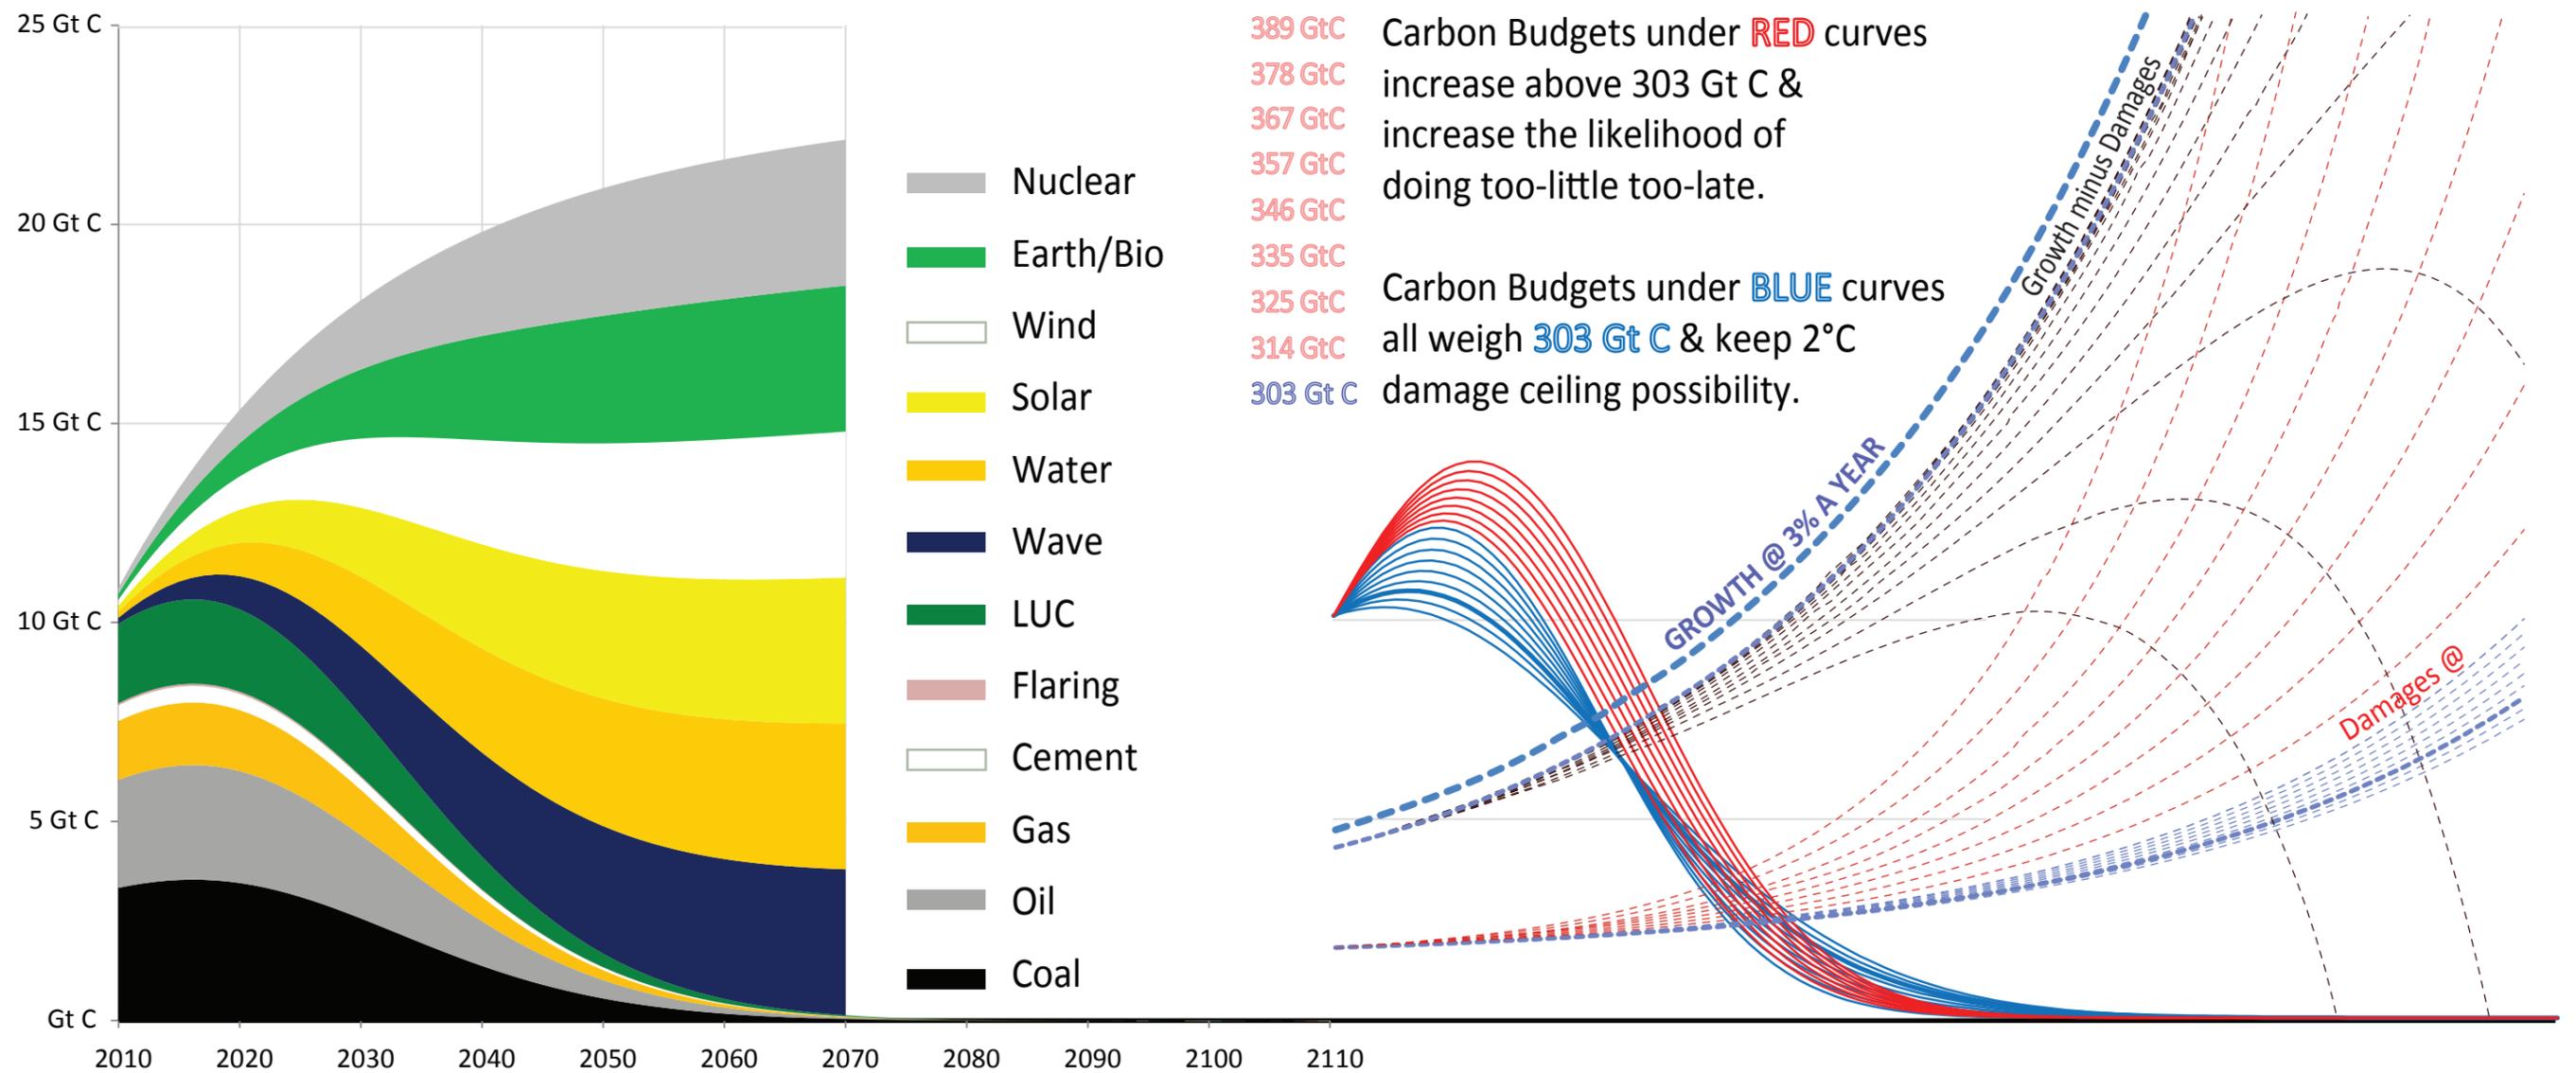

. . . can this 'contraction & conversion' happen fast enough to avert the damage rates arising if it doesn't?

The price of carbon must rise & the volume must fall;  
 the price of renewable alternatives must fall,  
 & the volume of this must rise, but . . .
